Mistall's Notifications are now centralized in one location.

Configure alerts for key events like offline cameras or signs, lots reaching or exceeding capacity, overtime conditions, and other operational thresholds that matter to you.

All notifications are configured through a central intuitive user interface, so you can see what needs attention, act quickly, and maintain confidence in your guidance and reporting.

Mistall now gives you even more flexibility to access your data. In addition to built-in Power BI reporting and APIs, you can now use the new Data Exporter feature to pull your data out of Mistall when and how you need it.

Mistall supports common formats and endpoints, with exports that can be run manually or scheduled. Your data, your way.

Mistall's new Data Analyst Tristan!

We're excited to welcome Tristan to the Mistall team.

Tristan brings fresh energy and new approaches to data intelligence, and will play a key role in how we design and deliver data presentations for our customers.

As Mistall continues to expand the breadth and depth of data we ingest from other parking solutions, it's increasingly important that we turn that information into clear, actionable insight.

Welcome, Tristan!

Secret underground parking spot - or a trap!
