My First IPMI

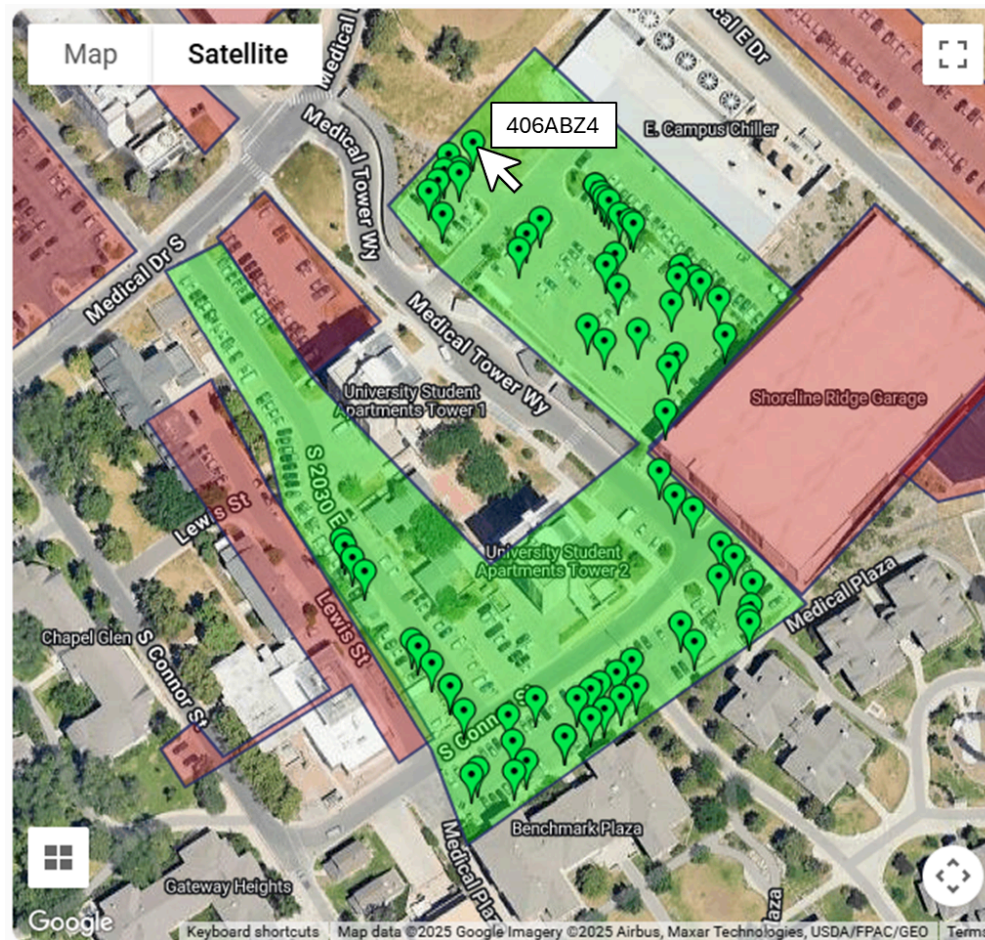

Hi everyone, Jackie here, reporting in after my first IPMI! I've only been in the industry for 6 months, and let me just say, WOW! Who knew parking was SUCH a big thing? I've been learning at Mistall, and loving it.

It was fantastic to get out onto the show floor and meet so many new people and brands. Meaningful conversations all around, and a great chance to really immerse myself; this conference is so clearly the beating heart of the industry! If I missed you this year, I'll look forward to the next.

New Feature: LPR Trails

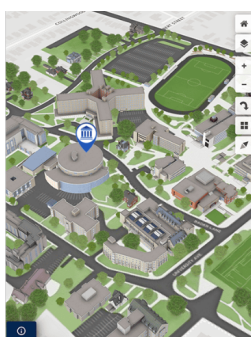

Have you ever wanted to trace your LPR vehicle and see what plates it's collecting and where they're located? Now you can!

LPR Trails is a new feature built into Mistall to create a "trail of breadcrumbs" following your mobile LPR data collection.

This no-charge feature works automatically with our integrations from **Genetec**, **AIMS**, and **Vert.ai**.

Contact [Franklin](#) to learn more.

Put Parking On The Map

We've been talking with [Concept3D](#), a company with interactive and detailed 3D maps. They can incorporate real-time parking availability right from Mistall. Show your parking to consumers in the best light.

Tell 'em Mistall sent you!
