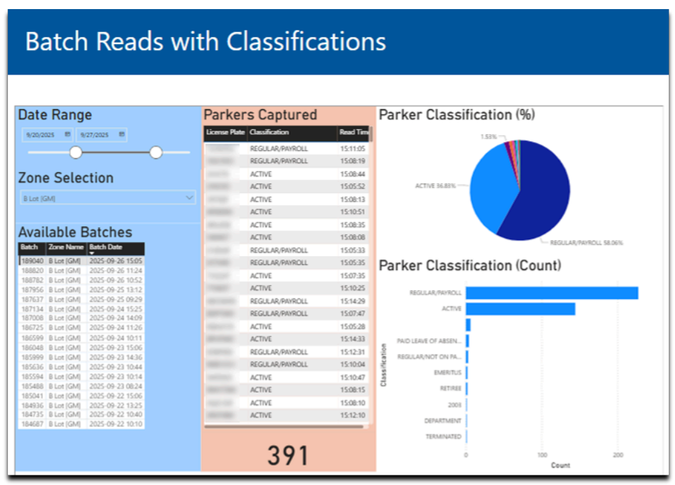
Mobile LPR Occupancy by Parker



Mistall's newest Data Integration visualization shows your mobile LPR occupancy broken out by parker classification.

Mistall pulls your mobile LPR reads and hits for a location into a batch. We also pull your known plates and their associated permit or parker classification. Mix these together, and you get the breakdown.

For the visualization, select a mobile LPR location batch and explore who is parking in the location. Go beyond just capturing occupancy - identify parking behavior.

New LPR Integration with VAXTOR

VAXTOR turns your security cameras into fixed ALPR cameras. VAXTOR offers an LPR engine for a number of camera manufacturers like AXIS, Vivotek, Hanwha, Genetec, and more. Mistall pulls all of that data into the Mistall Dashboard and converts it into counts.

Identifying plates along with your vehicle counts provides additional details, such as dwell time and turnover. Reach out to learn more.

Mistall Events

You can now see all of the parking events Mistall is exhibiting or presenting at in one location Mistall Events. We hope to see you soon.
