

GLASS FLOORING AND TREADS

Anti-slip Glass Flooring

At TCG Glass, we are committed to providing the best and safest products using the latest technologies. That is why TCG Glass is the first and only company to offer the following features with our glass flooring and glass stair products:

- Full system solutions.
- Anti-scratch glass flooring.
- Widest variety of glass flooring products.
- Operable glass floors.
- Anti-slip products that exceed international requirements. (Show us a “competitor” anti-slip test and we will show how they do not meet code.)
- Energy efficient Insulated glass flooring.
- ADA compliant glass flooring for visually impaired.
- Walkable skylights - meet title 24.
- ASTM compliant glass floors to minimize your liability. (We do not cut corners like “competitors” which means you are safe when working with TCG.)
- Fully engineered wet stamped engineering calculations.
- Drivable glass floors and walkable skylights effectively transparent products - interior and exterior
- 23+ years producing glass flooring systems - nobody else has the experience or knowledge!

GLASS FLOORING AND TREADS

GlassGrit™

GlassEtch™

GlassFrit™

GlassSculpt™

WE CURRENTLY OFFER FOUR DIFFERENT ANTI-SLIP SOLUTIONS FOR GLASS FLOORING:

Our **GlassGrit™** anti-slip walking surface is the highest quality anti-slip product available. Our GlassGrit™ “beads” are permanently fused to the top surface of the glass in our state-of-the-art production process. GlassGrit™ will not fade or lose its anti-slip capabilities over time.

Our **GlassEtch™** products are developed entirely through an acid etching technique where portions of the glass surface are removed to varying depths. This controlled process delivers an attractive and durable anti-slip surface. The GlassEtch™ acid etched walking surfaces serves a dual role – a safe walking surface and a modesty surface. The consistent acid-etched finish obscures the viewing

through the glass while maintaining a high level of light transmittance.

Our **GlassFrit™** products are made via silk screening onto the glass, much like how a t-shirt is printed, and then baked onto the glass.

Our **GlassSculpt™** products are made via a secret process and was first developed for the Observation Deck of Freedom Tower in NY. GlassSculpt™ delivers a high level of anti-slip coefficient for interior applications and the ultimate in transparency. GlassSculpt™ is available in both standard or custom patterns.

Crystal Clear™

Ultimate Privacy™

Ultimate Privacy Frost™

Privacy Frost™

MODESTY

When specifying a glass-flooring product designers should review the privacy aspects of the installation. In public applications an obscure product should be used so that improprieties do not occur. This obscure product should still allow for light to pass through the glass. TCG offers both transparent and translucent options to fit most every project requirement.
