Key topics and research questions of the track

- Effects of entrepreneurship on mental health and well-being of individuals in the long term
- The impact of contextual factors on entrepreneurial well-being (e.g., social (family), spatial context)
- Effects of entrepreneurship on individual’s stress-level and mental illness

Note: We also encourage contributions that address more than the given topics or research questions creating new insights about the (contextual) antecedents and outcomes of entrepreneurial wellbeing. Especially in view of the prevailing gaps in research about entrepreneurial wellbeing, longitudinal
studies are desirable. Note, the track is also open to research addressing other - but related - topics. We also welcome contributions from different scientific backgrounds: economics, psychology, sociology, etc.
