

THE TSDOH ASSESSMENT MATRIX™

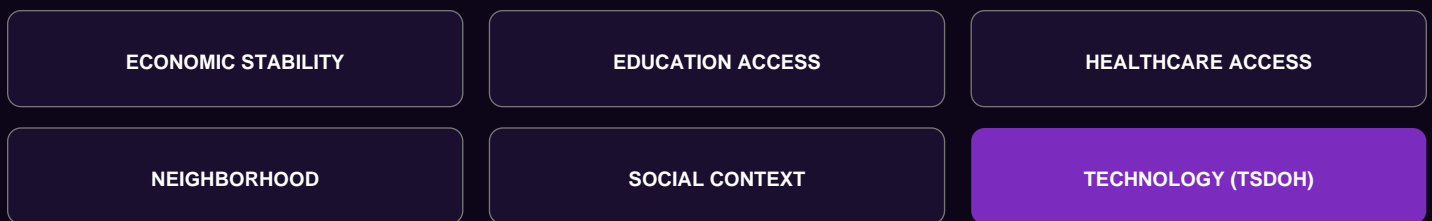

Technology as the 6th Social Determinant of Health

A proprietary framework that positions technology access, literacy, and readiness alongside the five traditional social determinants of health.

THE PROBLEM

The five traditional Social Determinants of Health (SDOH) — economic stability, education, healthcare, neighborhood, and social context — have guided public health policy for decades. But they were defined before the digital revolution. Today, technology access is not a luxury; it is a determinant of life outcomes. Communities without broadband, digital literacy, or AI readiness face compounding disadvantages across every other determinant.

The Six Determinants

WHY TECHNOLOGY IS THE 6TH DETERMINANT

<p>Healthcare Goes Digital</p> <p>Telehealth, patient portals, and AI diagnostics require digital access. Without it, health disparities widen.</p>	<p>Education Requires Connectivity</p> <p>Remote learning, digital curricula, and AI tutoring demand broadband and device access for every student.</p>
<p>Economic Mobility Is Digital</p> <p>Job applications, banking, benefits enrollment, and workforce training all live online. No access means no opportunity.</p>	<p>AI Is Reshaping Everything</p> <p>Communities that cannot assess, adopt, and leverage AI will fall further behind in every measurable outcome.</p>

The TSDOH Assessment Matrix™

<p>6 CORE DOMAINS</p>	<p>42 ASSESSMENT POINT</p>	<p>3 READINESS TIERS</p>	<p>1 ACTION ROADMAP</p>
