

# Exterior Remodel Trends for Home Show Season 2026

Home show season is the perfect time to refresh your home's exterior, whether you're preparing to showcase your space, thinking about selling, or simply ready for a fresh new look. This year's exterior remodel trends focus on clean design, long-lasting materials, and curb appeal that truly stands out.

At Lemke Home Improvements, exterior remodeling isn't just about appearances, it's about protecting your investment with quality craftsmanship built for Northern climates.

Here are the top exterior remodel trends homeowners are loving this home show season, and how Lemke helps bring them to life.

## Exterior Remodel Trends for Home Show Season 2026

**EXTERIOR EXPERTS**

**METAL WALL PANELS  
SIDING | GUTTERS | SOFFIT | FASCIA**

## Seamless Steel Siding for a Clean, Modern Look

One of the biggest exterior remodeling trends this season, and one of Lemke's signature offerings is Seamless Steel Siding.

Unlike traditional siding, which is installed in short overlapping panels, Lemke's seamless steel siding is custom manufactured to fit your home's exact measurements. This means:

- A smooth, uninterrupted exterior with no unsightly joints or splices
- Fewer weak spots where moisture or pests can infiltrate

- A sleek, modern appearance that boosts curb appeal
- A clean finish that highlights architectural lines and design features

Seamless steel siding not only looks great but is engineered for long-term performance. It's:

- **Virtually maintenance-free** — just spray with a hose every few years to keep it looking new
- **Highly durable and resistant to hail, fire, and extreme weather**
- Designed to **maintain shape and appearance for decades**
- Available in a **wide array of colors and profiles** so homeowners can match their style and vision

Lemke's expert team custom fits and installs every piece, ensuring a flawless finish and solid performance, something mass-produced, modular siding simply can't deliver.

appeal**

**Highly  
durable**

**Wide array of  
colors**

## Functional & Stylish Gutters That Protect and Complete Your Remodel

A top exterior remodel trend this season isn't just about looks; it's about performance too. That's where gutters and downspouts come in. While they serve a critical functional purpose, moving rain and snowmelt away from your foundation to protect landscaping, basement walls, and soil integrity, they can *also* enhance your home's exterior design when thoughtfully chosen and installed.

At Lemke Home Improvements, professional installation of gutters and downspouts is a key part of our exterior remodel services. We offer multiple styles and sizes, including:

- **5-inch K-Style gutters**
- **6-inch K-Style gutters**
- **Fascia style gutters**
- **Half-round gutters**

These options allow homeowners to select a look that complements their home's architecture while providing *top-tier performance*.

## **Why Roofing Water Management Matters**

Especially in Northern climates, rainstorms and heavy snowmelt can produce a significant amount of water that needs to be managed effectively. Gutters and downspouts help:

- **Protect your foundation** by moving water away from the base of your home
- **Reduce soil erosion** near landscaping
- **Prevent basement moisture problems** or water infiltration
- **Keep exterior walls dry and free from staining**

Lemke also offers **Leaf Shelters** (gutter guards) that make seasonal maintenance simpler, dramatically reducing leaf and debris buildup so you spend less time cleaning and more time enjoying your remodel.

## **Style Meets Function**

Gutters don't have to be hidden. When color-matched to your siding or accent elements, they can visually support your exterior design, tying in with trim, fascia, and overall color palettes. Whether you want them to blend in or subtly stand out, Lemke helps you select options that compliment your remodel goals.

# Functional & Stylish Gutters

When color-matched to your siding or accent elements, they can visually support your exterior design.

## Design Details That Define Your Home's Exterior

This home show season, exterior design trends are all about clean neutrals paired with bold accents and thoughtful details, creating homes that feel modern, cohesive, and custom.

Homeowners are gravitating toward soft siding tones like whites, warm grays, and light neutrals, then layering in contrast through darker trim, window frames, or accent features. These combinations add depth and personality while keeping the overall look timeless.

At Lemke Home Improvements, exterior remodels go beyond siding alone. Their team helps homeowners bring everything together with coordinated design elements that elevate curb appeal from every angle.

## Popular Accent Features Lemke Helps Install:

### Custom Trim & Detail Work

Clean trim lines around windows, doors, and corners add definition and highlight architectural features. These details create a polished, professional finish that makes homes stand out during home show season.

### Vertical Siding & Mixed-Material Accents

Adding vertical siding sections or contrasting materials helps break up large wall spaces and

creates visual interest. These accent areas act as focal points and give your exterior a designer-inspired look.

### **Coordinated Color & Profile Selection**

Lemke works closely with homeowners to ensure siding, trim, soffit, fascia, and gutters all complement one another. This color coordination ties the entire exterior together for a seamless, intentional appearance.

When paired with Lemke's seamless steel siding and custom exterior services, these accents don't just improve appearance, they enhance durability and long-term value too.

The result? A refreshed exterior that feels modern, balanced, and built to perform in Northern climates.
