	Non-Adult: Less than 500lbs			
Equine	ALL			
Sheep	ALL			
Goats	ALL			
Alpacas	ALL			

Where were the livestock physically located on January 1, 2025?

NOTE: a grazing animal is defined as those species of livestock that, from a nutritional and physiological perspective, satisfy more than 50% of their net energy requirement through the consumption of growing forage grasses and legumes, regardless whether or not they are grazing or are present on grazing land or pastureland. Unweaned livestock are not considered a grazing animal and are ineligible for LFP.

Payment Calculation NOTE: The LFP monthly payment rate for losses because of a qualifying drought is calculated at 60% of the smaller of the monthly feed cost payment rate per head or the monthly feed cost based on the normal carrying capacity of the eligible grazing or pastureland acres.
