iM The Complete Decontamination Strategy

Our focus is on enabling patient safety for healthcare providers, whilst providing real choice throughout the endoscope and surgical instrument decontamination journey.

This is why we provide a complete decontamination strategy.

Time to talk to iM Med.

iM Clean

Comprehensive range of high-quality products and accessories for the decontamination journey of medical devices.

The iM Clean Range has been developed to support all the stages of the safe and compliant procedures required for the decontamination journey of the endoscope.

From use, through the decontamination stages, right back to the procedure room, ensuring the endoscope has been reprocessed to its optimum state for the safe use on the next patient.

PROCEDURE ROOM

Prioritising infection
prevention in endoscopy
with a portfolio of
solutions for procedural
patient care.

iM CLEAN STAGE 1

iM

iM Med is passionate about patient safety.

With a portfolio of solutions along the patient pathway, the iM Clean Range has been developed to enable healthcare providers the choice to procure innovative products of the highest quality, to support safe patient care.

Arrange a visit by a member of the iM Med decontamination specialist team for a discussion on how we can support your individual requirements.

We can also provide departmental audits, product trials and departmental training.

iM Med

Eliminate the patient risk from contaminated valves

The intricate design and shape of valves means that ensuring safe reprocessing is extremely difficult and problematic. That, coupled with growing risks such as multiple-resistant germs, increases the demand of changing from re-usable components to safe disposable products.

Single packed disposable valves:

- Reliability

- Traceability

- Cost-effective alternative

- Guidance supported

The iM Med sterile single-use valves are manufactured to the highest quality and at a cost-effective price, enabling departments to transition to this patient safety essential at a price point to support local cost improvement initiatives.

Minimise cross-contamination risks

- Sterile single-use pack

- Elimination of risk during reprocessing

- Reduce human error

Overcome limitations of tracking and traceability
- Single-use valves come with Lot No. for documentation

Offer consistent performance and improve unit efficiency

- Not subject to wear and tear

- Less expensive

- Reduce reprocessing time

Time to talk to iM Med.

AIR/WATER SUCTION BUTTONS

FOUR BUTTON VALVE SET

Contains suction, air/water, biopsy valves and auxiliary water connector fitting for Olympus endoscopes series 140, 160, 165, 180, 190, 240, 260, 290

STEELCO EPW 100S

The EPW 100S allows the complete assistance of manual cleaning, taking care of the most stressing repeated actions (syringe flushing and rinsing) and drastically reducing the risk of errors thank also to the OCS system, the One-time Connection System shared between pre-washing, ashing/disinfection and drying/storage devices.

Manual Cleaning automation

Leak test, powerful and effective channel flushing & rinsing

Fast cycle start up

Endoscope and operator are selected by the "built in" barcode reader or RFID System

Process traceability

Detailed print report of all the cycle phases transferred to a USB stick or integrated into SteelcoData

**Suitable for organic residual sampling**

Immediately after the channels rinsing phase

SCOPETECH DUAL FLUSH

4-in-1 Flexible Endoscope Cleaning System

The ScopeTech Dual Flush dramatically improves the speed of endoscope reprocessing, while providing step-by-step cleaning process management, cycle validation and reports.

- Built-in automated scope inflation: for water immersion leak test

- Integrated detergent pump: doses the right amount and tracks detergent conditions

- Two flushing / rinsing ports: with single or dual mode operation

- Cleaning sequence control: promotes consistent processing while recording

- Scope inflation and cleaning process reports: Windows compatible software and Excel reports

- Sequence and express processing modes: simple and easy to use

- Compact, watertight cabinet mounts: allows for mounting on a wall or countertop

- Eliminates technician muscle fatigue: quiet and efficient pumping through endoscope channels

FLUSHTECH GI

Automated Endoscope Flushing - No Manual Syringing

The FlushTech GI is a powerful, easy to operate endoscope flushing aid that uses single and dual flushing modes to move chemistry and water through all the channels of an endoscope.

- Simultaneous port flushing

- Pulsating flush technology

- Flushing sensor with alarm

- Manual or auto flush settings

- High-capacity flushing

- Reporting capabilities

- No syringing required

- System decontamination cycle

Disinfectant for self disinfection of flushing systems available, enquire for further information

REPROCESSING

Guaranteeing effective decontamination in automated reprocessing with a portfolio of UK manufactured chemistries and accessories.

iM CLEAN STAGE 3

BRITISH MANUFACTURED CHEMISTRY

Peracetic acid endoscopy disinfectants designed and manufactured within an accredited ISO 13485:2016 Quality Management System and CE marked.

With BSI as our notified body, we manufacture type tested disinfectants in our manufacturing facility in Yorkshire, England.

We supply decontamination facilities across the country with their AED approved chemistry. By choosing a chemistry manufactured in the UK, Trusts can add to their ongoing environmental targets and carbon footprint reduction by selecting UK manufactured rather than imported chemistry.

QUALITY ASSURED

A devotion to quality and patient safety forms the core of all we do and iM Med is proud to hold the ISO 13485: 2016 accreditation.

The ISO 13485 standard is an effective solution to meet the comprehensive requirements for a Quality Management System. Adopting ISO 13485 provides a practical foundation for manufacturers to address the Medical Device Directives, regulations and responsibilities, as well as demonstrating a commitment to the safety and quality of medical devices.

iM Med

Steelco — Miele Group Member

STEELCO APPROVED PERACETIC ACID

For customers selecting the Steelco endoscopy washer disinfector range, iM Med provides the Steelco manufacturer approved iM Peracept 15™ peracetic acid and iM EZcept™ enzymatic detergent. These UK manufactured chemistries are type tested and approved on the NHS Supply Chain Decontamination Accessories Framework and they are available for immediate delivery, removing the time risks that imported products can encounter.

iM ENDOPAX™

PROLONG THE ASEPTIC STORAGE AND SAFE TRANSPORTATION OF ENDOSCOPES FOR UP TO 30 DAYS.

ENDOSCOPE PACKING, STORAGE AND TRANSPORTATION SYSTEM

A solution for the aseptic storage and safe transportation of endoscopes. This unique process safely contains the endoscopes for up 30 days.

Following decontamination and compliant drying in an endoscope drying cabinet, thereby ensuring all residual bacteria are fully desiccated, an endoscope is packed using the space-saving, free-standing iM EndoPax™ system.

The system is based on a preservation process widely used in the food industry to reliably eliminate the risk of microbial growth.

With a rapid, user-friendly process, the system delivers a process ensuring the internal and external lumens are fully conditioned using an inert gas mix, to inhibit aerobic and anaerobic bacterial growth.

Without the addition of chemistry to the terminal packing process, potential risks are reduced to the endoscope, patient and user.

The medical device bag is heat sealed ensuring a reliable seal integrity until the user requires the endoscope.

The iM EndoPax™ system has an independent monitor to provide a fully validated and traceable process.

iM EndoPax™ enables endoscopes to be prepared and conveniently ready for routine lists, emergency situations, out of hours and off-site endoscopy work. Endoscopes can be transported in a controlled and tamper evident environment using transportation cases or lockable trolleys.

iM Med

ACADEMY

"

The effective training of my staff is so crucial for the ongoing safe standards of my department.

The iM Academy has been fantastic. They developed a training plan with me in my role as decontamination lead and then delivered the training in an expert and engaging manner with my Team.

They stayed with us until all of the Team felt confident and iM are now our go to for any training and support we need. They understand what's needed and have provided peace of mind for the ongoing competence of my staff.
