1.0 Porter's Value Chain

In a 1985 book "Competitive Advantage," Michael Porter wrote, in order to add values for customer, a series of value creation activities are required in an organization. Two important activities were defined which are the Primary Activities and the Support Activities. Both activities are interdependent and the value created during the Primary Activities will then be translated into profit margin for the organization.

Value Created and Captured – Cost of Creating that Value = Margin

As much as possible the organization will not hesitate to add value into their product or services as the more value added for customer, the more profitable the company will be and it develops the competitive advantage for the organization. Figure 1 is the Porter's value chain model.

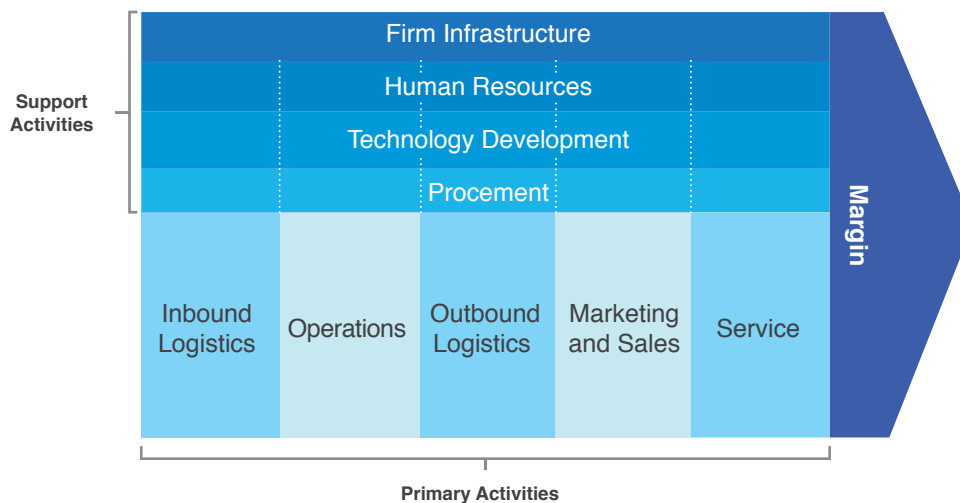

Figure 1: Porter's Value Chain

2.0 Value Chain & Ecosystem

Value chain is a set of activities an establishment undertakes that adds and creates value to its customers. It is a process that entails different activities that provide cost and differentiation advantage to an establishment. The way the activities within a value chain perform and connect will determine the costs of the product and services and eventually the profit of the establishment. Understanding how an establishment creates value is a critical element in developing a competitive strategy.

The eco-system involves linking and connecting of different touch points within an industry. Each touch point is complementary to one-another and add value to the value chain. Within the eco-system, stakeholders such as government agencies, associations as well as educational institutions are incorporated in as they form the foundation and support for the industry.

3.0 ICT Value Chain

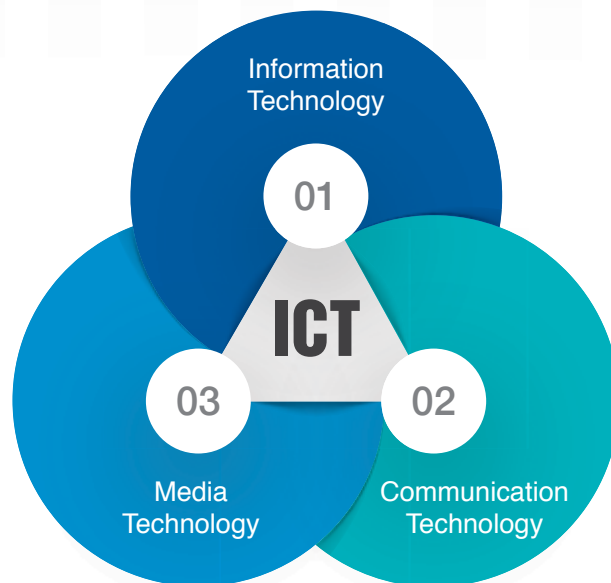

Figure 2: ICT

Although there is no universal definition of ICT, the technology behind it actually consists of three very distinct technologies which are Information Technology, Media Technology and Telecommunication or Communication Technology. The convergence of these technologies (Figure 2) has created ICT and as a result multitude of devices and services were created. The smart phone for example, is one of the devices. Correspondingly, the ICT Value Chain is also the combination of the three technologies value chains. Each of these technologies had its own specific value chain although some of the activities especially during the manufacturing of components; the same manufacturers are producing them.

Figure 3 represents the ICT Value chain as a whole. It encompasses the stakeholders (Government Agencies, Industry Group and Education Institutions), the hardware and software manufacturer which also includes the wholesalers and distributors, the ICT sub-sectors as defined by Department of Statistics Malaysia (DOSM) together with their main activities and the final part is the end user which includes consumer, Banks, Government, Corporations and Retailers.

The stakeholders determine the direction of the whole of ICT industries in Malaysia. At the onset of all the policies, laws and codes that governing the ICT industries, manufacturers build facilities to produce ICT products that eventually will be distributed by wholesalers and appointed distributors. ICT sometimes requires experts to determine the correct hardware and software to be merged thus the Value Added Reseller will come into the picture. With or without Value Added Reseller, ICT industries make use of the technology to produce products or services that related to Telecommunications, Media and purely ICT services. These products and services are then sold to end users such as private consumers, Governments, Industries, Banks and others.

Relating this to the generic Porter's value chain, the Supporting Activities are represented by the stakeholders while the Primary Activities are actually happening within the dotted box as a whole.

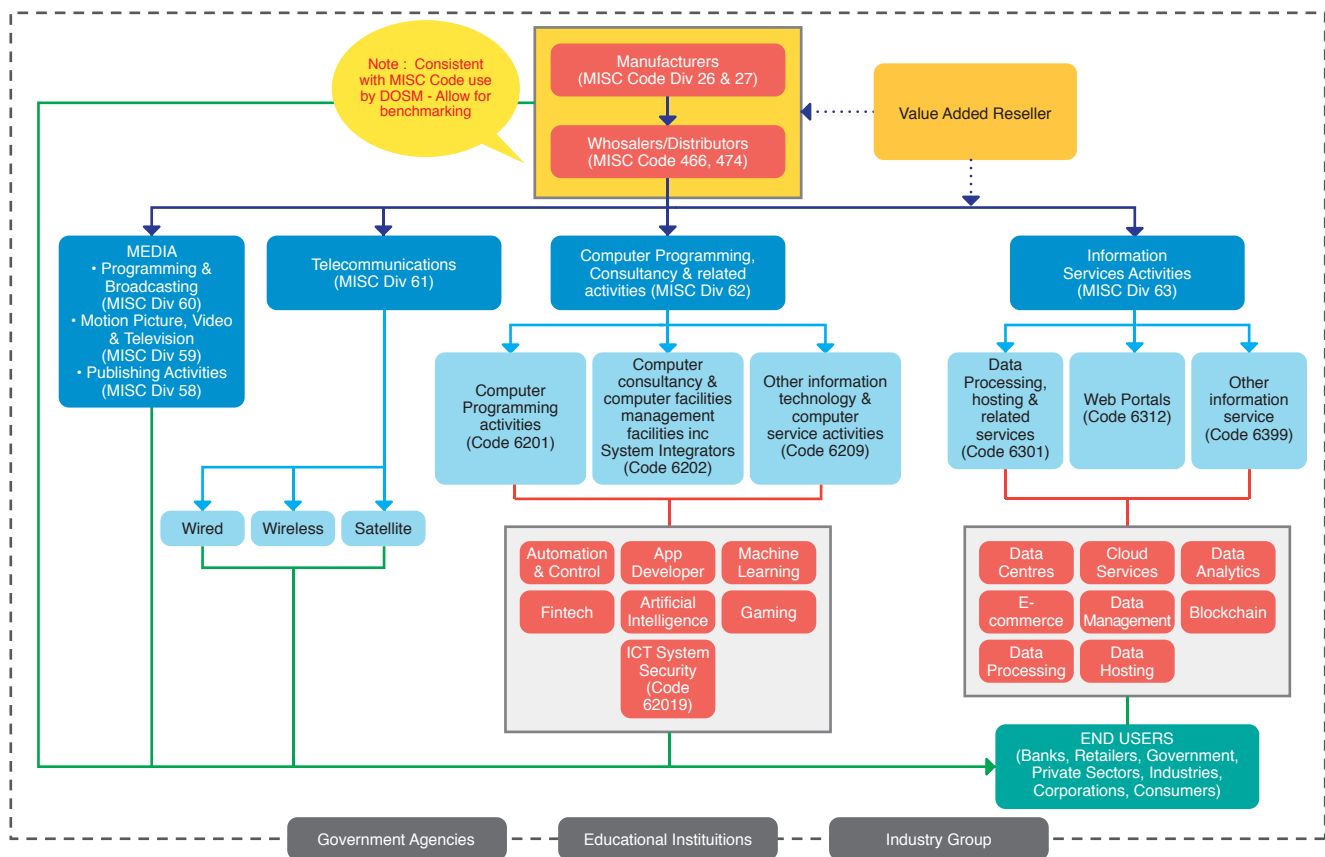

Figure 3: ICT Value Chain

The ICT value chain as a whole is fragmented but yet interconnected. It is fragmented since ICT requires specialization at different stages of its production and thus the value chain is split-up according to the country's specialization. Geographically, although fragmented, with the advent of internet technology, players in the Primary Activities area are interconnected. Each of the sub sectors and also the end users are capable to either be in touch with each other for information sharing and through some E-commerce platform, sales transaction can be done without going through the traditional sales channel. In Figure 3, the green lines represent the interconnectivity among the manufacturer group, sub-sectors and the end users.

3.1 The Stakeholders

3.1.1 Government Agencies

Framing and supporting the ICT industry in Malaysia are chartered by the Government Agencies that provide the necessary policies and infrastructure. Since 1994, with the establishment of National Information Technology Council of Malaysia (NITC), has been advising and consulting the government on matters pertaining ICT. Figure 4 shows the main ICT development by the government of Malaysia over the years.

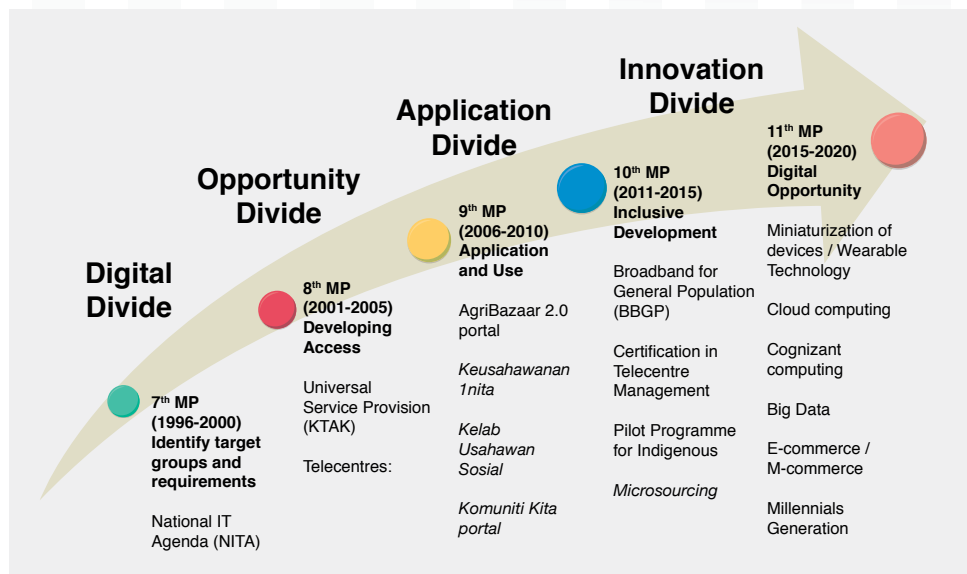

Figure 4: Main ICT development in Malaysia - Source: EPU and Pikom

The ICT industry is recognized as the main enabler for the Digital Economy and the Government of Malaysia through Kementerian Komunikasi dan Multimedia Malaysia is spearheading the Digital Economy through Malaysia Digital Economy Corporation (MDEC). Other Ministries includes Kementerian Sains dan Teknologi Malaysia through its Government Link Companies (GLC) such as MIMOS Bhd (MIMOS), SIRIM Bhd (SIRIM), Technology Park Malaysia Corporation Sdn. Bhd. (TPM) and Malaysian Technology Development Corporation (MTDC) are taking some part in promoting and encouraging the Digital Economy in Malaysia.

In the public sector, MAMPU or Malaysian Administrative Modernization and Management Planning Unit have outlined the strategic direction of ICT implementation in the Malaysian Public Sector for the year 2016 until 2020. This is in line with the Government Transformation Plan to be a developed nation by year 2020.

The Government through its related agencies (Table 1) is also proving funds to ICT establishments. These funds are for idea generation, research and development, innovation, incubation, alpha prototypes, beta prototypes, commercialization, branding and market development in science and technology, including ICT and multi-media.

Funding opportunities for R&D, Innovation and Commercialization

- Cradle Fund of Ministry of Finance (MOF)
- Science Fund of MOSTI
- InnoFund of MOSTI
- TechnoFund of MOSTI
- Malaysian Animation Creative Content Centre (MAC3) Fund of MDeC
- Technology Innovation for Globalisation Fund (TIG) of MDeC
- Malaysian Technology Development Corporation (MTDC) Funding:
- Commercialisation of Research & Development Fund (CRDF)
- Technology Acquisition Fund (TAF)
- The Business Growth Fund (BGF)
- Business Start-up Fund (BSF)
- Business Expansion Fund (BEF)
- Export Services Fund of Malaysian External Trade Corporation (MATRADE)
- Soft Loan Scheme for Services Exports of MATRADE

Table 1: Funds available from Government Agencies

The ICT legal and regulatory environment created by the Government of Malaysia has provided the much needed protection and security of information transaction and also intellectual property rights. Table 2 shows the related Acts and Codes for ICT industries in Malaysia

Legal and regulatory

- Communications and Multimedia Act 1998
- Computer Crimes Act 1997
- Copyright Act (Amendment) 1997
- Digital Signature Act 1997
- Electronic Commerce Act 2006
- Electronic Government Activities Act 2007
- Payment Systems Act 2003
- Personal Data Protection Act 2010
- Telemedicine Act 1997
- Penal Code (including Chapter on terrorism & cyber-terrorism)
- Communications and Multimedia Content Code

Table 2: Legal and Regulatory for ICT industries in Malaysia

3.1.2 Education Institution

The educational institution supplies the much needed ICT workforce to the industry. Among the Universities that advocate the ICT agenda of the nation are:

Universiti Multimedia Malaysia
Universiti Sains Malaysia
Universiti Teknologi Mara
University Teknologi Malaysia
University Malaya
Taylors University
Tunku Abdul Rahman University College
Sunway University
Asia Pacific University of Technology and Innovation
Politeknik Malaysia

Together with other Government and Private Universities, to date, according to the Malaysian Qualifications Register (MQR), there are almost 600 bachelor degree and diploma as well as certificates courses related to ICT – Computer Science, Information Technology, Multimedia, Computer Engineering, IT Engineering and Telecommunication Engineering. These courses will adequately provide graduates to the fast growing digital economy industry.

The following tables are current courses available at Public (IPTA), Private (IPTS) Universities and also Polytechnics that cater for the needs of the industry in terms of manpower and talent. The mapping shows the need for certain disciplines such as Data Analytics which are not being offered by universities/polytechnics.

3.1.3 Industrial Group

Industrial group such as Persatuan Industri Komputer dan Multimedia Malaysia (PIKOM) serves as the voice of the ICT industry in Malaysia and works to improve the business climate in the interests of all its member companies and to promote industry growth in line with national aspirations. PIKOM major initiatives are Government Affairs, Export Promotion, Human Capital Development, Research, Business and Social Networking.

Creative Content Association Malaysia (CCAM) is an industry led government funded association of the leading content creators in Malaysia formed in 2012 for the express purpose of promoting and exporting local content and creative services to overseas markets and international broadcasters. This will be done by utilizing the latest digital technology, creativity, as well as by exploiting the unique culture of Malaysia. Among the objectives of CCAM is to provide views, procedures, policy suggestions based on that which will be introduced by the Malaysian Government to assist creative content producers in increasing their efforts to export local content abroad.

Telecom Association of Malaysia (TAM), representing the telecommunication industry and served as a platform to promote synergy among the industry players. TAM also is promoting industry awareness of telecom standards to achieve world class practices and skills.

3.2 Manufacturer

This represents the hardware component manufacturers – microelectronic, casing, power supply etc, the system manufacturers – mainframes, desktops, laptops, servers and network/communication devices and finally the software manufacturers – tools, applications and contents.

Although generally products are sold via wholesalers, distributors and eventually through sales channels, ICT products are also available direct to the end users from the manufacturer as in the case of Dell and software that could directly downloaded from their server such as Microsoft.

Value added resellers and System Integrators act as intermediary that provides the knowhow matching the correct hardware with the software or application solution required by the end user. They provide services usually involving large ICT procurement for Governments and large corporations.

3.3 ICT Sub-Sectors

As defined by DOSM.

The Media sub-sectors are predominantly dominated by Government and also large corporations.

- a) Programming & Broadcasting – This is basically radio and TV. Producing their own content or assembling together audio/visual components into a complete daily program and transmitting it in several ways, such as over the air, by satellite, by cable or over the internet – example ASTRO, Tegas Broadcast.
- b) Motion Picture, Video & Television - Contains activities related to Recording, Production, Distribution, Projection of Motion pictures, Sound master recordings (including music), Individual radio and TV program (“non-live content”) and Music publishing (audio and printed music) – example Animasiastudio, Animonstastudio.
- c) Publishing Activities - Acquisition of copyrights, making content available to public (print, electronic, etc.) and also software

And the rest of the sub-sectors are:

- d) Telecommunication - Activities related to provision of telecommunications: transmission of audio, video, text or other data. Further divided into wired telecommunication activities, wireless telecommunication activities and satellite telecommunication activities – example Celcom, Maxis.
- e) Computer Programming, Consultancy & related activities - Provision of IT expertise, writing, modifying, testing, supporting software, planning/designing computer systems, on-site computer systems management and operation. Application development, gaming and artificial intelligence are some of the activities – examples: ABS Software International, Datakraf Solution
- f) Information Services Activities - Data processing, hosting and related activities; web portals and other information service activities. Recent development in digital economy give rise to new set of activities such as Fintech, Data Centers, E-Booking, Cloud Services, E-Commerce, Shared Services, Outsourcing and Cyber Security. Examples of companies involves in these activities are Danawa Resources, Exitra.

3.4 End Users

The end users are defined as the ultimate user that uses the hardware and software that it is intended for. It consists of retail consumers, Government, corporation and it could be used by the industry itself. ICT products are used in socio-economy development and also business. As a result, ICT products have a large base of end users.

4.0 Objective of value chain development & establishment data profiling

The objective of this report is to develop a value chain and data profiling of 100 establishments within the industry. It is a baseline report where future initiatives could be developed to assist specific establishments in improving their productivity and thereby enhancing their growth.

4.1. Methodology and Sampling

- 4.1.1. A list of establishments from different sources, relevant government agencies and associations directories were randomly drawn up. A sample of 250-300 were the initial sample size drawn and added more when necessary to give a final sample of minimum 100 establishments.
- 4.1.2. Information and data on geographical and activities of each establishment were collected using multi methodology namely research on websites as well as primary data collection – via telephone calls. Establishments that were dormant, uncontactable or refused to co-operate were dropped from the listing.
- 4.1.3. Financial data of each establishment was purchased from Suruhanjaya Syarikat Malaysia (SSM) for the productivity mapping.
- 4.1.4. Establishments that were excluded are :
 - Establishments that has no 2016/ 2015 financial data. Financial data was based on 2016 financial data.
 - Establishments that were declared as exempted companies for the financial year
 - Enterprises - non Sdn Bhd - No financial data was available
 - Listed companies - due to multiple subsidiaries and group financial data does not reflect true performance of individual subsidiaries
 - Establishments that refused to co-operate or provide employee data (Required for productivity mapping)

Distribution & Sampling of Establishments by State ICT

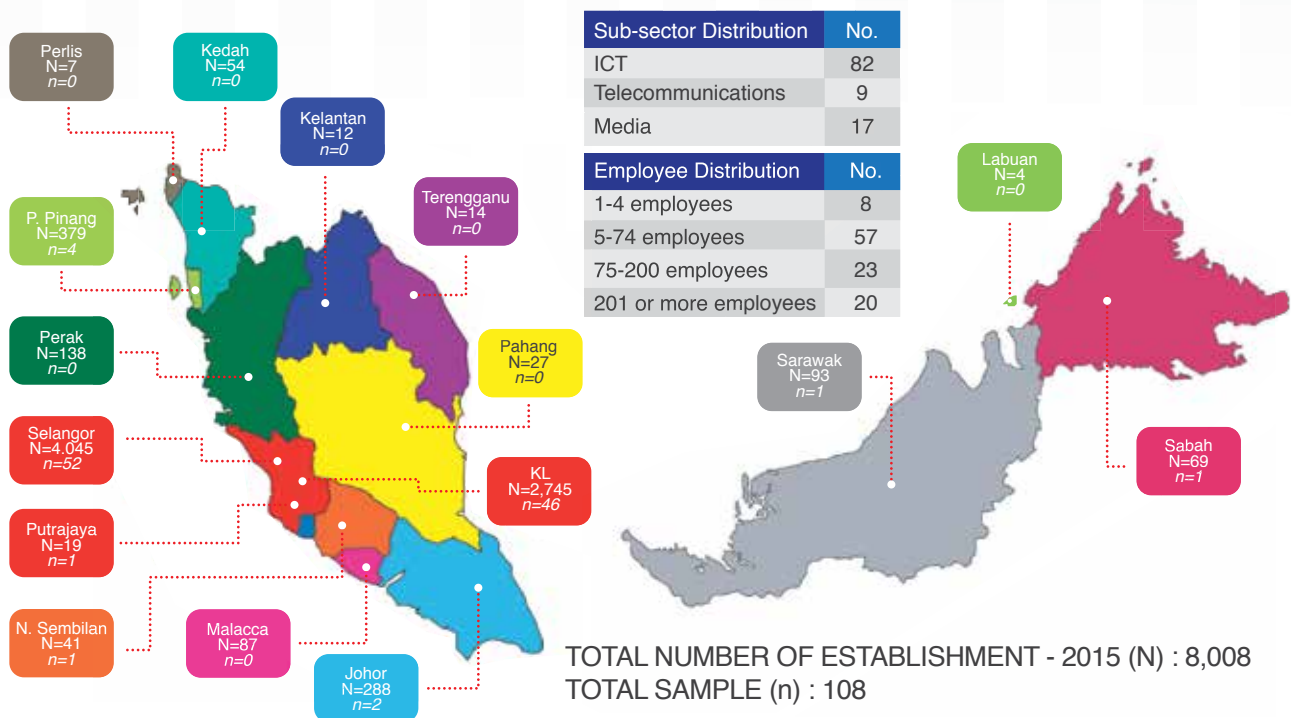

Figure 5 : Distribution & Sampling of Establishment by State for ICT

No. of employees	Sales Turnover	Classification
Less than 5 employees	Less than RM300,000	SME - Micro
5 – 29 employees	RM300,000 < RM3 mil	SME- Small
30 - 75 employees	RM3 mil <= RM20 mil	SME - Medium
76 or more employees	More than RM20 mil	Large

(Source: Department of Statistic / SME Corp)

Note:

- *Ranking of the establishments was based on the sample and does not reflect the entire industry.*
- *“(Company)” after establishment name denotes the financial data of the company and not the Group.*
- *“(Comprehensive)” after establishment name denotes the comprehensive financial data of the company and not the Group*
- *“(Consolidated)” after establishment name denotes the consolidated financial data of the Group*
- *“(Group)” after establishment name denotes the financial data of the Group*

5.0 GEOGRAPHICAL MAPPING

Geographical mapping indicates the spread and cluster of each touchpoint / segment within the ecosystem. The main objective of a geographical mapping is to understand the integration of each player by virtue of their physical location. It allows a check on capability and resources availability as such industry players would be able to share resources. On a macro level, policy makers are able to determine if there are any gaps between available resources and market needs.

6.0 Value Chain Mapping

Value chain mapping details the type of activities within the industry as performed by each sub sector. Value Chain mapping aim to project the concentration of activities. Abundance or lacking of specific activities can be inferred from the value chain mapping. It is imperative to understand the value chain mapping as it can assist in future planning of infrastructure, manpower and other resources. It can also be used as a catalyst and initial input for any future or proposed initiatives. Overcrowding & untapped market could also be visualized from the value chain map.

ID	NAME OF ESTABLISHMENT	Manufacturing		Intermediaries (Wholesaler / Distributor / Reseller)		Repair work / maintenance

7.0 Productivity Mapping

The Productivity Mapping reflects the establishments' productivity in terms of human resource, financial and capital. Five indicators are presented in this report to determine the individual establishments' productivity. The indicators are: Labour Competitiveness, Labour Productivity, Capital Productivity, Capital Intensity and Profitability. The indicators provide stakeholders with better understanding of each establishment's productivity and the pain points that are impeding the Strategic Thrust as outlined in the Malaysia Productivity Blueprint (MPB).

The approach in deriving the various Productivity Indicators is best explained individually, as follows:

Labour Competitiveness

Competitiveness in terms of labour cost indicates the comparability of the industry in producing products or services at the lowest possible labour cost.

RATIO	UNIT	WHAT IS TEELS
Labour Cost Per Employee (LCE) = Labour Cost / No. of Employees	Ringgit Malaysia (RM)	Measure the average remuneration per employee. A high ratio means high returns to the individual workers and vice versa
Unit Labour Cost (ULC) = Labour Cost / Total Output	Pure Number	Indicates the proportion of labour cost to total output. A high ratio indicates high labour costs. This could be due to a labour shortage and lack of skilled labour, or indicative of a poor labour mix. It could also be due to high labour turnover.

Labour Productivity

Labour productivity is one way of gauging the productivity performance of an industry.

RATIO	UNIT	WHAT IS TEELS
Total Output Per Employee = Total Output (Revenue) / No. of Employees	Ringgit Malaysia (RM)	The size of output generated by each employee of the enterprise.
Capital Turnover = Total Outputs (Revenue) / Fixed Assets	Pure Number	This ratio measures the efficiency in capital utilization and/ or marketing system. A high ratio indicates efficiency in capital utilization and good marketing system. A low ratio means low turnover of materials, high work-in progress and fixed assets.

Capital Intensity

Capital intensity measures the amount of fixed assets allocated to each employee. It is also known as Fixed Assets per Employee or simply capital-to-labour ratio. This ratio measures whether an industry is relatively capital-intensive or labour-intensive.

RATIO	UNIT	WHAT IT TELLS
Fixed Assets Per Employee = Fixed Assets/ No. of employees	Ringgit Malaysia (RM)	Indicates whether an enterprise adopts a capital intensive or labour-intensive policy. A high ratio indicates high capital intensity. A low ratio indicates that the enterprise is dependent on labour-intensive methods or that there is low technological input.

Definition of Variables

Revenue	Revenue was based on the 2016 / 2015 financial data purchased from SSM
Employed Persons (Average for the period)	All categories of employees, including working directors/proprietors/ partners, unpaid family workers and part-time workers
Labour Cost	Wages and salaries (including commissions, bonuses and benefits), remuneration paid to working directors/proprietors/partners, and EPF/ SOCSO paid by employers.
Fixed Assets (Average for the period)	All physical assets namely transport equipment, computers, machinery and equipment, and furniture and fittings. (Exclude Land & building) at is at cost

NOTES:

- Revenue ranking of the establishments was based on the sample and does not reflect the entire industry ranking (universe)
- "n/a" Data unavailable

RANK	NAME OF ESTABLISHMENT	REVENUE (RM) 2016	Revenue Growth (%)	Labour Cost % change
1	MAXIS BROADBAND SDN BHD	7,924,242,000.00	34.29	221.86
2	DIGI TELECOMMUNICATIONS SDN BHD	6,597,102,000.00	-4.58	-2.99
3	CELCOM MOBILE SDN BHD	5,654,122,000.00	-16.14	-64.69
4	U MOBILE SDN BHD (Company)	1,836,426,000.00	28.68	11.93
5	CELESTICA (M) SDN BHD	1,191,134,384.00	1.97	-3.77
6	YES (YTL COMMUNICATIONS SDN. BHD.)	644,019,226.00	-0.02	5.74
7	TUNE TALK SDN. BHD (Company)	327,130,555.00	-4.97	-4.50
8	PRESTARIANG SYSTEMS SDN BHD	125,206,260.00	10.93	-7.31
9	AIRSTAR (M) SDN BHD	94,022,846.00	9.65	5.35
10	APPLIED BUSINESS SYSTEM SDN BHD	92,555,837.00	20.65	-55.87
11	HCL AXON MALAYSIA SDN BHD (Company)	89,391,140.00	-28.26	-23.10
12	BRIDGENET SOLUTIONS SDN BHD	51,604,290.00	54.94	6.60
13	ELABRAM SYSTEMS SDN BHD	48,611,000.00	56.49	153.76
14	REDTONE TELECOMMUNICATIONS SDN BHD	45,633,000.00	-19.90	-27.47
15	CENTURY SOFTWARE (M) SDN BHD	40,727,125.00	-4.18	32.61
16	GAMLITE IT (M) SDN BHD (Company)	40,068,328.00	538.20	6.94
17	DANAWA RESOURCES SDN BHD	30,223,146.00	-66.36	-8.32
18	EDARAN IT SERVICES SDN BHD	29,546,746.00	-17.97	30.36
19	ADVANTECH CO MALAYSIA SDN BHD	28,331,052.00	47.61	22.42

Labour Competitiveness		Labour Productivity	Capital Productivity	Capital Intensity
Labor Cost per Employee (LCE)= (Labour Cost / No of Employee) (RM)	Unit Labour Cost (ULC)=Labour Cost / Total Output (Revenue)	Total Output (Revenue) Per Employee =Total output (Revenue) /No. of Employees (RM)	Capital Turnover =Total Output (Revenue) / Fixed Assets	Fixed Assets Per Employee =Fixed Assets/ No. of Employees (RM)

Chart 1 Breakdown of the ICT-GDP by industries (2010-2016) - Source : PIKOM , ICT Strategic Review 2017/2018, 9th Edition

The unification of digital and physical economies is so rapid that in 2020 the Government is expecting Digital Economy to contribute 20% of the National GDP. The ICT industry continued to boom in 2016, posting RM164.9 billion in ICT-GDP, an increase of 8.5% over RM152.1 billion in 2015. ICT Services contributed the biggest share at 40%, at RM66 billion, followed by ICT manufacturing at 36.1% (PIKOM, 2017). More statistics on ICT Industries are available at Appendix 1.

The importance of ICT industries in expanding the Digital Economy is unquestionable thus the Government is putting the pieces in place to drive this sector. Through MDEC, 5 focus areas have been identified to be the catalysts that will kick start and sustain an ecosystem of digital economy: Big Data Analytics (BDA), the Internet of Things (IoT), E-Commerce, and Data Centre & Cloud, Cybersecurity.

MDEC has also programs that ensures the talent for Knowledge and Digital Workforce are sufficient to cater for future demand. Three core groups are targeted which are: Industries, Tertiary and Schools. The programs created are tailored for these talent groups: Primary and Secondary students, Undergraduates, Fresh Graduates And Working Professionals, Digital Maker And Premier Institute of Higher Learning.

Appendix 1 Economics Statistics For ICT Industry

Year	Contribution of ICT to the Economy (RM billion)	Share of ICT to the Economy (%)	ICT-GDP (billion)	Share of ICT to GDP	eCommerce of non-ICT industry	Share of eCommerce of non-ICT industry to the Economy	GDP at Current Prices (RM Billion)	Share of eCommerce to GDP	eCommerce (RM billion)
2010	135.3	16.5	105,745	12.9	29,576	36%	821	4.6	37,729
2011	144.5	15.9	108,103	11.9	36,407	4.0%	911	4.9	44,605
2012	154.6	15.9	113,799	11.7	40,787	4.2%	971	5.1	49,760
2013	167.4	16.4	122,734	12.0	44,641	4.4%	1018	5.4	55,261
2014	188	17	137,252	12.4	50,723	4.6%	1106	5.8	63,636
2015	206.1	17.8	152,054	13.1	53,999	4.7%	1157	5.9	68,280
2016	224	18.2	164,937	13.4	59,049	4.8%	1230	6.1	74,603

APPENDIX 2 PRODUCTIVITY INDICATOR

Labour Competitiveness

Competitiveness in terms of labour cost indicates the comparability of the industry in producing products or services at the lowest possible labour cost.

RATIO	UNIT	WHAT IT TELLS
Labour Cost Per Employee (LCE) = Labour Cost / No. of Employees	Ringgit Malaysia (RM)	Measure the average remuneration per employee. A high ratio means high returns to the individual workers and vice versa
Unit Labour Cost (ULC) = Labour Cost / Total Output	Pure Number	Indicates the proportion of labour cost to total output. A high ratio indicates high labour costs. This could be due to a labour shortage and lack of skilled labour, or indicative of a poor labour mix. It could also be due to high labour turnover.

Labour Competitiveness

Labour productivity is one way of gauging the productivity performance of an industry.

RATIO	UNIT	WHAT IT TELLS
$\text{Total Output Per Employee} = \frac{\text{Total Output (Revenue)}}{\text{No. of Employees}}$	Ringgit Malaysia (RM)	The size of output generated by each employee of the enterprise.

Capital Productivity

Capital productivity indicates the degree of utilisation of fixed assets and how efficient these assets are being utilised

RATIO	UNIT	WHAT IT TELLS
$\text{Capital Turnover} = \frac{\text{Total Outputs (Revenue)}}{\text{Fixed Assets}}$	Pure Number	<p>This ratio measures the efficiency in capital utilization and/ or marketing system.</p> <p>A high ratio indicates efficiency in capital utilization and good marketing system.</p> <p>A low ratio means low turnover of materials, high work-in progress and fixed assets.</p>

Capital Intensity

Capital intensity measures the amount of fixed assets allocated to each employee. It is also known as Fixed Assets per Employee or simply capital-to-labour ratio. This ratio measures whether an industry is relatively capital-intensive or labour-intensive.

RATIO	UNIT	WHAT IT TELLS
$\text{Fixed Assets Per Employee} = \frac{\text{Fixed Assets}}{\text{No. of employees}}$	Ringgit Malaysia (RM)	<p>Indicates whether an enterprise adopts a capital intensive or labour-intensive policy.</p> <p>A high ratio indicates high capital intensity.</p> <p>A low ratio indicates that the enterprise is dependent on labour-intensive methods or that there is low technological input.</p>

Glossary

Animation

The process of making films in which drawings or puppets appear to move.

Blueprint

A plan or set of proposals that shows how it is expected to work.

Broadcast

Is a programme, performance, or speech on the radio or on television.

Communication

The systems and processes that are used to communicate or broadcast information, especially by means of electricity or radio waves.

Computer

Is an electronic machine that can store and deal with large amounts of information.

Cybersecurity

The state of being safe from electronic crime and the measures taken to achieve this.

Desktop

Computers that are a convenient size for using on a desk or table, but are not designed to be portable.

eCommerce

The buying, selling, and ordering of goods and services using the Internet.

Ecosystem

A complex network or interconnected system

Fintech

Computer programs and other technology used to support or enable banking and financial services.

Laptop

A personal computer that is small and light enough to be operated on the user's lap

Mainframe

Mainframe computer is a large powerful computer which can be used by many people at the same time and which can do very large or complicated tasks.

Microelectronic

Is the branch of electronics that deals with miniature electronic circuits.

Multimedia

Computer programs and products which involve sound, pictures, and film, as well as text.

Network

A system of interconnected computer systems, terminals, and other equipment allowing information to be exchanged.

Outsourcing

The act of subcontracting (work) to another company

Platform

Such an operating system, software, etc. having a standard design for use with compatible programs, applications, etc.

Program

A set of instructions that a computer follows in order to perform a particular task.

Satellite

A man-made device orbiting around the earth, moon, or another planet transmitting to earth scientific information or used for communication.

Server

The central computer in a network to which other computers or terminals are connected: shared programs, files, and databases are stored on the server.

Software

The programs that can be used with a particular computer system.

Telecommunication

Communication by electronic or electric means, as through radio, telephone, telegraph, television, or computers.

Telemedicine

The treatment of disease or injury by consultation with a specialist in a distant place, especially by means of a computer or satellite link.

Website

Is a set of data and information about a particular subject which is available on the internet.
