

# HOME HEALTH VS. HOME CARE

## Home Health

Ordered by a physician for clinical services

Typically used after a hospital discharge or rehab stay

Covered by private insurance or Medicare

Provided by licensed nurses, social workers, and therapists

## Home Care

Non-medical care; known as companion services

Provided by care aides who are not trained for medical duties

Assists with dressing, toileting, bathing, meals, and transportation

Out of pocket expense; some long-term care policies will reimburse
