Fendertec Solution

Fendertec Bumper

- .The bumper is made entirely by hand with the @fendertec technique
- .We use military elastomers which allow us resistance and elasticity
- .The designed models follow the stern profile and are designed to be maneuverable and are floating

Carbon Fiber support

- .The Fender support is made of carbon and has two side handles that facilitate the entry of guests
- .The studied design allows ease of installation, lightness and maneuverability
- The finishes can be created by customizing the model

Inox Accessories

- .Installation takes place via M20 knurls in polished stainless steel
 - The choice to use the fixing via M20 knurls allows those who
 - .operate the fender to install it extremely easily
- It is possible to design a customized fixing system (e.g. bayonet pins and M20 knurl)

ATELIER LADY HIDE
