# Introduction

**Who we are:**

Since 2001 we have been an internationally active, young family business based in Germany with a committed team that is constantly coming up with innovative solutions to our customers needs. We create coatings that provide waterproofing, durable antislip and different cooling solutions alongside with profound technical consultation. Sustainability is in the foreground of our development. We highly value the protection of our environment and resources such as raw materials, drinking water and energy.

**What we do:**

Porviva GmbH develops, produces and distributes materials and product solutions which make an important contribution to our future. We offer solutions for specialized floor coatings and waterproofing in water/ theme parks, buildings, transportation infrastructure and industrial applications.

## what is porviva®?

The porviva system is a unique coating system with many different possible properties. and can be used nearly universally - be it in the living room, terrace or pool. porviva is suitable for floors, walls, bathrooms, even for furniture and other surfaces, both indoors and outdoors as our porbits are lightfast, uv-stable and water-resistant.

Our porviva surfaces offer variable slip resistance as well as cooling properties. porbits. synthetic are acrylic-based crushed particles, coloured through with natural pigments.

Our other porbits. are made of a variety of materials such as metal, nut shells, natural stone and mica.

We are increasingly focusing our attention on renewable and recycled raw materials when selecting granules and fillers.

# design meets technology

We specialize in creating the appropriate porviva surface coating according to the requirements, needs and desired design for the customer. In doing so, we are also able to consider the budget of the respective project. We are happy to advise you.

# why porviva®?

porviva synthetic is available in many tints, NCS and RAL-Colors. Our porbits. are small particles of various materials. The porbits particles can be mixed to fit individual taste and needs.

Examples of these materials include colored minerals, natural stone and mica glimmer. These porbits can be combined or mixed with each other. Not only are colourful designs possible, porbits. synthetic can even be mixed with our porbits. mineral and porbits. metal ranges of granules to create a variety of surfaces exhibiting different surface properties and looks that fit any budget whilst being based on the same technically sophisticated porviva coating system.

Each porviva surface is tailored to your unique technical and design-specific needs.

# porviva® benefits

cooling effect

anti-slip effect

easy to clean  
& repair

natural design  
due to color fading

endless color  
variations

light & UV  
stable

solvent-free

jointless  
surfaces

minimal cons-  
truction height

# fields of application

porviva products can be used almost everywhere. We will advise you on the selection of the right porviva surface for your area of application according to properties and color options.

All porviva products are characterized in particular by:

- high mechanical resistance
- curing of fresh (green) concrete
- no adhesion problems
- low material consumption
- anti-slip effect
- cooling effect (porviva synthetic)

## INDOOR & OUTDOOR

# porviva® surface variations

## synthetic

available in a wide range of colors. The surface is characterized by excellent slip resistance and its cooling effect. Very beautiful natural color gradients can be created.

## mineral

sets strong visual accents. Only natural minerals and natural stones are used. porviva mineral is available in many color mixtures and in mica gold and silver shimmer.

## porpebble

Also in this variant we use only natural minerals, natural stones and glass. porviva porpebble is currently available in two color mixtures. A slight shimmer and colour shading make the surface particularly interesting.

## metal

is a surface coating made of real metal! Available in aluminum, stainless steel and brass. Due to the special application technique and the grinding process, each porviva metal surface is unique.

## metal spatola

is a surface coating made of real metal spatola! Available in aluminum, stainless steel, copper, bronze and brass. Due to the special application technique and the grinding process, each porviva metal surface is unique.

## nature

is for those who love nature and renewable raw materials. These porviva creations are made of natural materials such as walnut or coconut shells and coffee grounds.

# porviva<sup>®</sup>synthetic

is available in almost any color, depending on the size of the object. Not only different colors can be mixed together, it is also possible to add porbits in the metal or mineral finish. This results in unlimited possibilities for individual variations. The surface is characterized by excellent slip resistance and its cooling effect.

## Fields of application:

- wave pools/ surf pools/ pools
- river/ lagoons
- water features
- walkways
- sun & pool decks
- rest, locker & changing rooms
- restaurants/ bars
- kitchens
- warehouses
