PRESS RELEASE

**Texas Aerospace Technologies Secures TCCA, EASA, and ANAC
Validation for TS28 Emergency Battery Power Supply STC**

IRVING, Texas, September 11, 2025 – TEXAS AEROSPACE TECHNOLOGIES, a leading provider of aerospace solutions, announced today that it has successfully achieved Transport Canada Civil Aviation (TCCA), European Union Aviation Safety Agency (EASA), and Agência Nacional de Aviação Civil (ANAC Brazil) validation for the True Blue Power® TS28 Emergency Battery Power Supply Supplemental Type Certificate (STC).

These international validations expand on FAA approval and provide aircraft operators worldwide with a proven, cost-effective solution for emergency power. Manufactured by True Blue Power, the TS28 Emergency Battery Power Supply is a direct replacement for Radiant CBS28-1 battery systems. It provides dependable DC power to emergency lighting and other critical equipment in the event of main power failure.

The TS28 offers operators significant advantages, including:

- Lower operating costs through longer lifespan and reliable NiMH technology
- Reduced maintenance downtime with a fully rechargeable, easily swappable battery pack
- Proven performance with FAA TSO-C173a, DO-293A, and RTCA DO-160G qualifications

“The successful validation of the TS28 across TCCA, EASA, and ANAC jurisdictions demonstrates our commitment to delivering certified, globally accepted solutions that support operators with safety, reliability, and cost efficiency,” said Cisco Hernandez, President, Texas Aerospace Technologies. “This milestone ensures that aircraft owners and maintenance teams worldwide can integrate the TS28 with ease.”

The TS28 is available now through Texas Aerospace Technologies. For more information or to place an order, contact sales@texasaerospace.com.
