INDUSTRIAL
PRODUCTS | SERVICES | SOLUTIONS

Launched in 2012, this was the first range of cutting and grinding products using 3M's precision-shaped triangular grain abrasives.

This range will now be replaced by our latest and best offering.

Significantly raising the benchmark for cut rate and product life in heavy grinding and cutting applications.

We've re-engineered precision-shaped ceramic triangular grain using proprietary breakthroughs in molecular bonding technology.

Up to 3X longer lasting.

Responding to industry requirements for better abrasive productivity, worker safety and sustainability, 3M has developed abrasive wheel technologies that make portable bonded wheels work even faster and last even longer than our current best performing range. Performance is so good compared to existing 3M™ Cubitron™ II Performance Abrasives that we've established a new generation of products called 3M™ Cubitron™ 3 Performance Abrasives.

Upgrade your Portable Bonded Wheels to 3M™ Cubitron™ 3 now.

To maximize simplicity and value to our customers, the current 3M™ Cubitron™ II Portable Bonded Wheels range will be replaced by 3M™ Cubitron™ 3 Performance Abrasives. Customers will benefit from a wider product choice, better performance and optimized sustainability with no change in list price.

SCOTCH-BRITE™ SC SURFACE CONDITIONING BELTS

- Nonwoven, surface conditioning belts clean, blend, deburr and finish.
- Reduced loading and heat build-up allow extended operating time and consistent surface conditioning results.
- Conformability allows abrasive to stay in contact with complex-shaped parts in robotic processing.
- Reinforced backing and nonwoven open web material provide superior flexibility for detail work, over contours and edges.
- Removes surface imperfections, grind lines, mill, and other marks.

- Tightly layered "unitized" construction offers long life and durability.
- Excellent for aggressive heavy duty blending and finishing with uniform results.
- Good replacement for rubber bonded wheels and small set-up wheels.

UNITIZED WHEELS SELECTION GUIDE

Scotch-Brite™ Unitized Wheels are stacked, compressed layers of nonwoven web designed to bring abrasive to the part. Performance differences between unitized wheels can be attributed to mineral (aggressiveness) and density (hardness). The combination of these two characteristics and subtle variations determine if the wheel will cut more aggressively or will be more durable and less conformable.

TECHNOLOGY

3M PRECISION-SHAPED GRAIN NONWOVEN TECHNOLOGY

Scotch-Brite™ Deburr and Finish PRO Unitized Wheels combine 3M Precision-Shaped Grain with our nonwoven technology, so you get a wheel that's soft enough to reduce defects but wears like iron without sacrificing the smooth feel and control you expect from Scotch-Brite™ Wheels.

COOL UNDER PRESSURE.

Scotch-Brite™ Unitized Wheels are manufactured with compressed, nonwoven fiber construction and uniform grain distribution. These rugged, fast cutting wheels produce great results on all types of metal, composites and glass.

Smaller wheels are designed for use on die grinders and angle grinders.

Request A 3M™ Assessment

A&M Industrial can observe your current abrasive applications, tape and adhesive applications, or your PPE usage, and provide your company with expert level guidance that increases your efficiency, productivity, and safety.

Our team can help you:

- Identify the right 3M™ solution for your application.
- Provide data and vendor recommendations that contribute towards informed decision-making and continuous improvement initiatives.
- Demonstrate clear and measurable cost reductions.
- Eliminate inefficiencies & safety issues.
