USING CLAUDE (AI) INSIDE WUNDERBUILD

Claude + Wunderbuild Quick Setup Sheet

Everything you need to connect Claude to your Wunderbuild in one place: the server URL, the skill-file download, and a copy-and-paste prompt to get started. Keep this handy while you follow Lesson 1.

1 Add the Wunderbuild connector in Claude

In Claude, go to Customise → Connectors → Add custom connector, and paste in the Wunderbuild server URL below.

WUNDERBUILD MCP SERVER URL

```
https://mcp.wunderbuild.com/mcp
```

2 Download & upload the Wunderbuild skill

Download the Wunderbuild skill file, then in Claude go to Skills → Add → Upload a skill and drop it in. This teaches Claude how to use Wunderbuild.

SKILL FILE DOWNLOAD

```
https://bit.ly/wunderbuild
```

3 Paste this into Claude once connected

STARTER PROMPT — COPY & PASTE

```
I've just connected Wunderbuild to you. Give me a friendly, plain-English
overview of what you can now help me do with my Wunderbuild account. Please:
• Group it by what I actually do day to day — jobs & progress, quotes/estimates,
leads & sales pipeline, money (progress claims, purchase orders, variations),
schedule/Gantt, suppliers & contacts, documents.
• Under each group, give me 3 example questions I can copy and try.
• Keep it concise and non-technical — I'm a builder, not a developer.
• At the end, tell me anything you can't do yet, so I know the limits.
Then ask me which area I'd like to start with.
```

Tip: you'll need an API key from Wunderbuild first (Settings → Integrations → API integrations, all scopes, read & write). Lesson 1 walks through every step.
