

ExTerminex™

**'The Preferred Bait'**

Exterminex will definitely be "The Preferred Bait" for your corporation with the objective of exterminating termite colonies permanently.

# WHY SHOULD I USE ExTerminex™

- **Our forte** - Highly palatable bait and proven strong track records of colony elimination success rates
- **Our toxicant** - More than 80% of the major termite species that are known to destroy homes feed actively on our bait matrix
- **Our system** - Exterminex comes with a complete range of products to protect your home

Termites foraging the bait and building mud in the bait station

Structure damage caused by subterranean termites

## The Bait that works for you

### The Stubborn Dwellers

Termites can be one home owners' biggest worry by far. They work relentlessly day and night foraging food. Before you know it, termites have invaded your home completely and destroying your beloved premise. In which, damage is already done! The aggressive termites have already started hogging onto your expensive timber, structures and fittings.

With our latest revolutionary baiting system, the newly improvised formula plays an important role by intercepting the termites even before reaching your premise in the most non-evasive manner.

This state-of-the-art monitoring system will give home owners a piece of mind that their home is safe from termites' invasion.

# SOLUTION FOR HOME OWNERS

## HOW DOES THE BAITING SYSTEM WORK?

In the past, most of the solutions available in the market for subterranean termite controls are the conventional approach of barrier treatments with the use of chemicals. Our approach is to replace the conventional termite method with Exterminex state-of-the-art baiting system.

This technique slows down and eventually eliminates termite foraging in and surrounding your premise, passing on small amount of toxicant to the colony unnoticed.

Here's a simple process shown in exhibits A & B.

Exhibit A is an illustration of how our Exterminex In Ground (IG) Bait Station is being installed onto your nearby premise. The IG Bait Station is placed approximately 3 meters apart surrounding your premise. Once this has been installed, monitoring thus begins.

Exhibit B represents our Exterminex Above Ground (AG) Bait Station. With just 3 simple steps to install on infested walls or fixtures. Soon enough, termites will start entering into the installed bait station and feeding on Exterminex bait.
