

wireless keypad **FreePad**

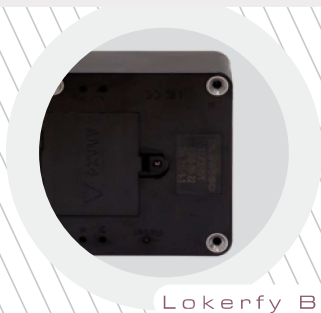

FreePad is an additional wireless keypad, so you can open Bluetooth devices with a numerical code without having an integrated keypad.

The FreePad keypad provides pin code opening for the X-RP electronic cylinder, the Opak access control, the Lockerfy BLE lock for lockers and furniture and the Defender hidden lock.

Keypad with standalone configuration, no wires or installation required, beyond attaching it to the wall.

To combat vandalism or theft of the keypad, the Omnitec system lets you associate another keypad to the device to continue the operation without affecting the access codes of guests or staff.

compatible devices

Lockerfy BLE

Defender

X-RP2

security

- **Vandal-resistant device**, tampering with cables or the FreePad keypad PCB does not open the linked device
- **Anti-spy numerical code**, admits up to 10 digits before and 10 after the opening code
- **1-to-1 link**, one keypad for one device
