Machine Learning and Mechanistic Models

Abdallah Derbalah

Supported by

Gates Foundation

Learning Objectives

- To introduce the concept of machine learning and artificial neural networks.
- To understand the challenges of using full-scale mechanistic models
- To illustrate an example of how ML can help overcome some of those challenges

What is machine learning?

Traditional Programming

SUDOKU

8		6		3		9	
	4			1		6	8
2			8	7			5
1		8			5	2	
	3		1			5	
7		5		3		9	
	2	1			7		4
6				2		8	
	8	7	6		4		3

ANSWER:

8	7	6	5	4	3	1	9	2
5	4	3	2	1	9	7	6	8
2	1	9	8	7	6	4	3	5
1	9	8	7	6	5	3	2	4
4	3	2	1	9	8	6	5	7
7	6	5	4	3	2	9	8	1
3	2	1	9	8	7	5	4	6
6	5	4	3	2	1	8	7	9
9	8	7	6	5	4	2	1	3

Machine Learning

SUDOKU

8		6		3		9	
	4			1		6	8
2			8	7			5
1		8			5	2	
	3		1			5	
7		5		3		9	
	2	1			7		4
6				2		8	
	8	7	6		4		3

ANSWER:

8	7	6	5	4	3	1	9	2
5	4	3	2	1	9	7	6	8
2	1	9	8	7	6	4	3	5
1	9	8	7	6	5	3	2	4
4	3	2	1	9	8	6	5	7
7	6	5	4	3	2	9	8	1
3	2	1	9	8	7	5	4	6
6	5	4	3	2	1	8	7	9
9	8	7	6	5	4	2	1	3

Artificial Neural Networks (ANNs)

- ANNs are the most common model for machine learning.
- Have wide range of applications:
 - Image Processing: face recognition, medical image diagnosis, ... etc.
 - Prediction: sales, stock prices, treatment and disease outcomes, ... etc.
 - Natural Language processing: sentiment analysis, text summarisation, language identification and translation, ... etc.
 - Speech recognition: text-to-speech conversion.

How do our brains learn?

How do our brains learn?

Roe et al, The journal of Neuroscience 1992; 12(9):3663

A biological neuron

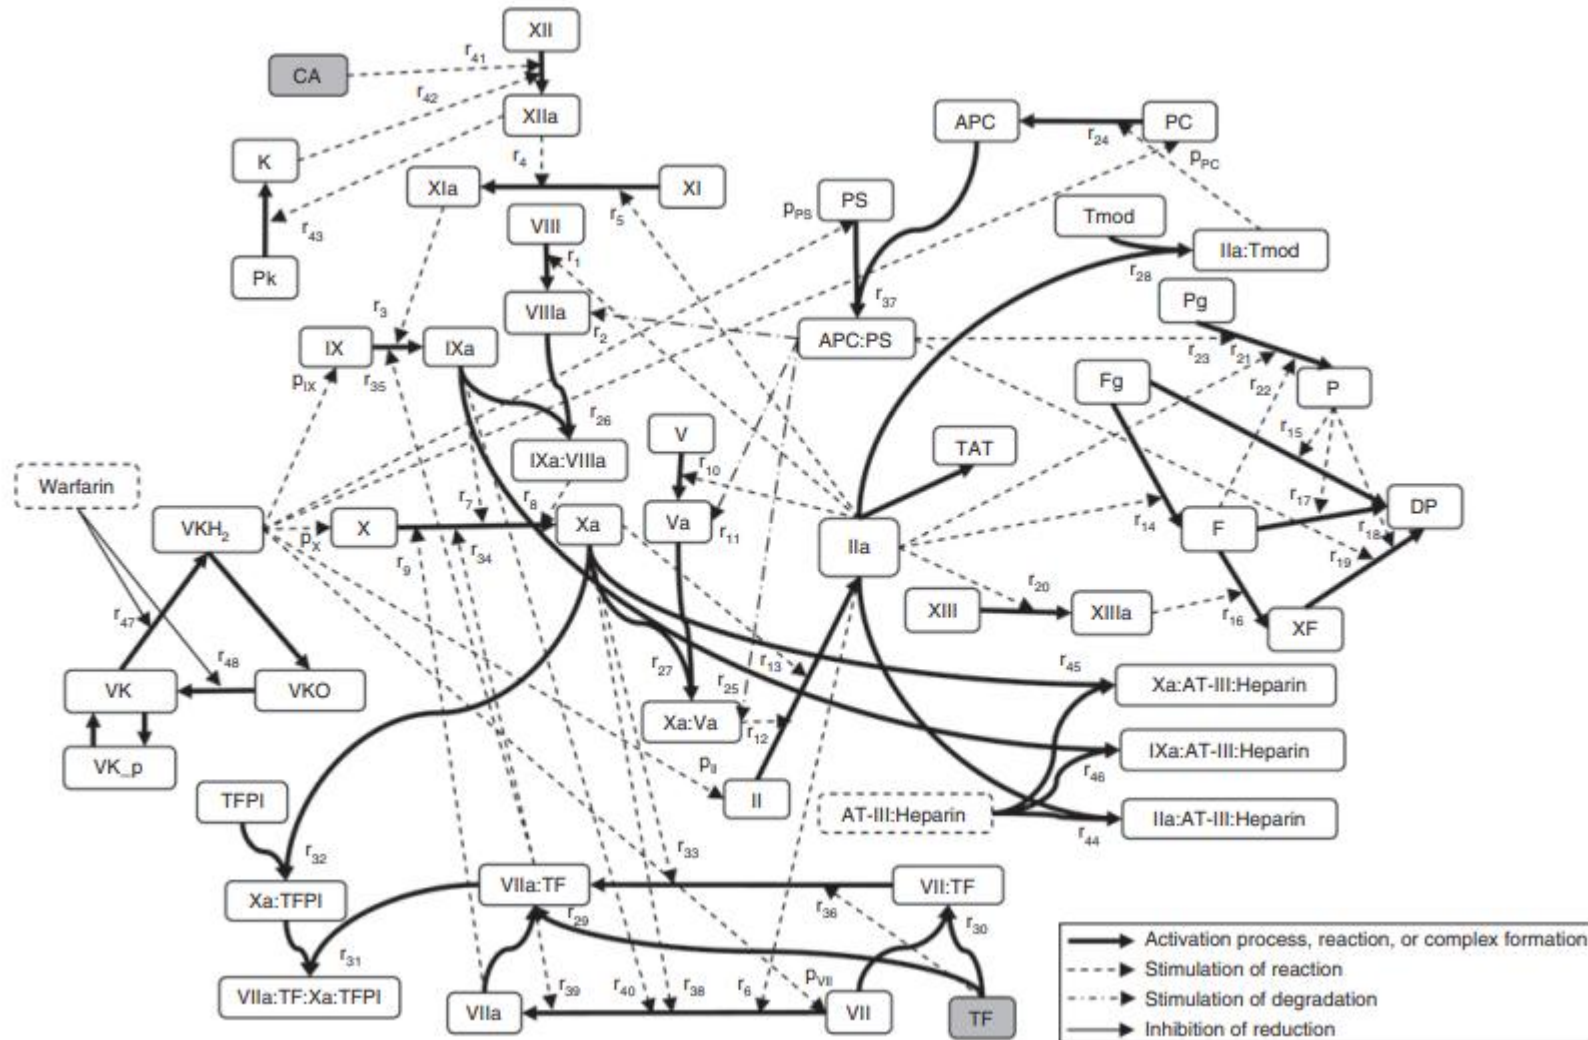

An artificial neuron

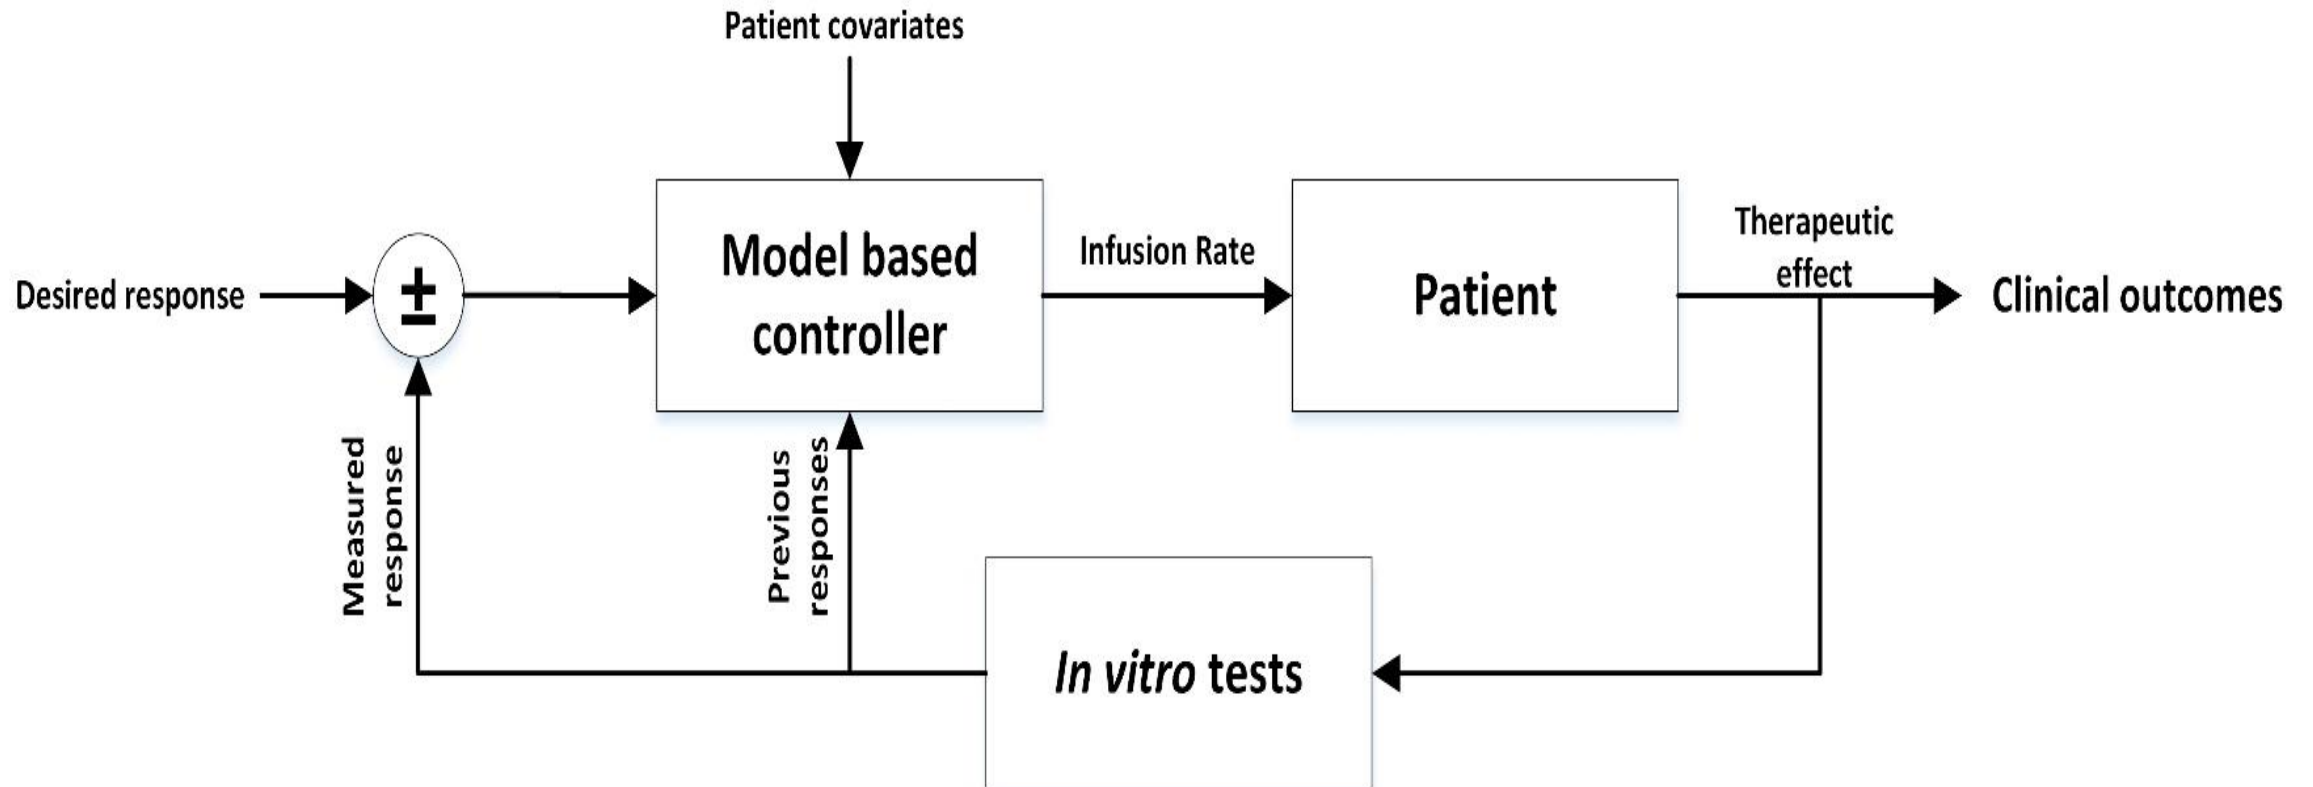

Feed-forward neural networks

The Coagulation network model

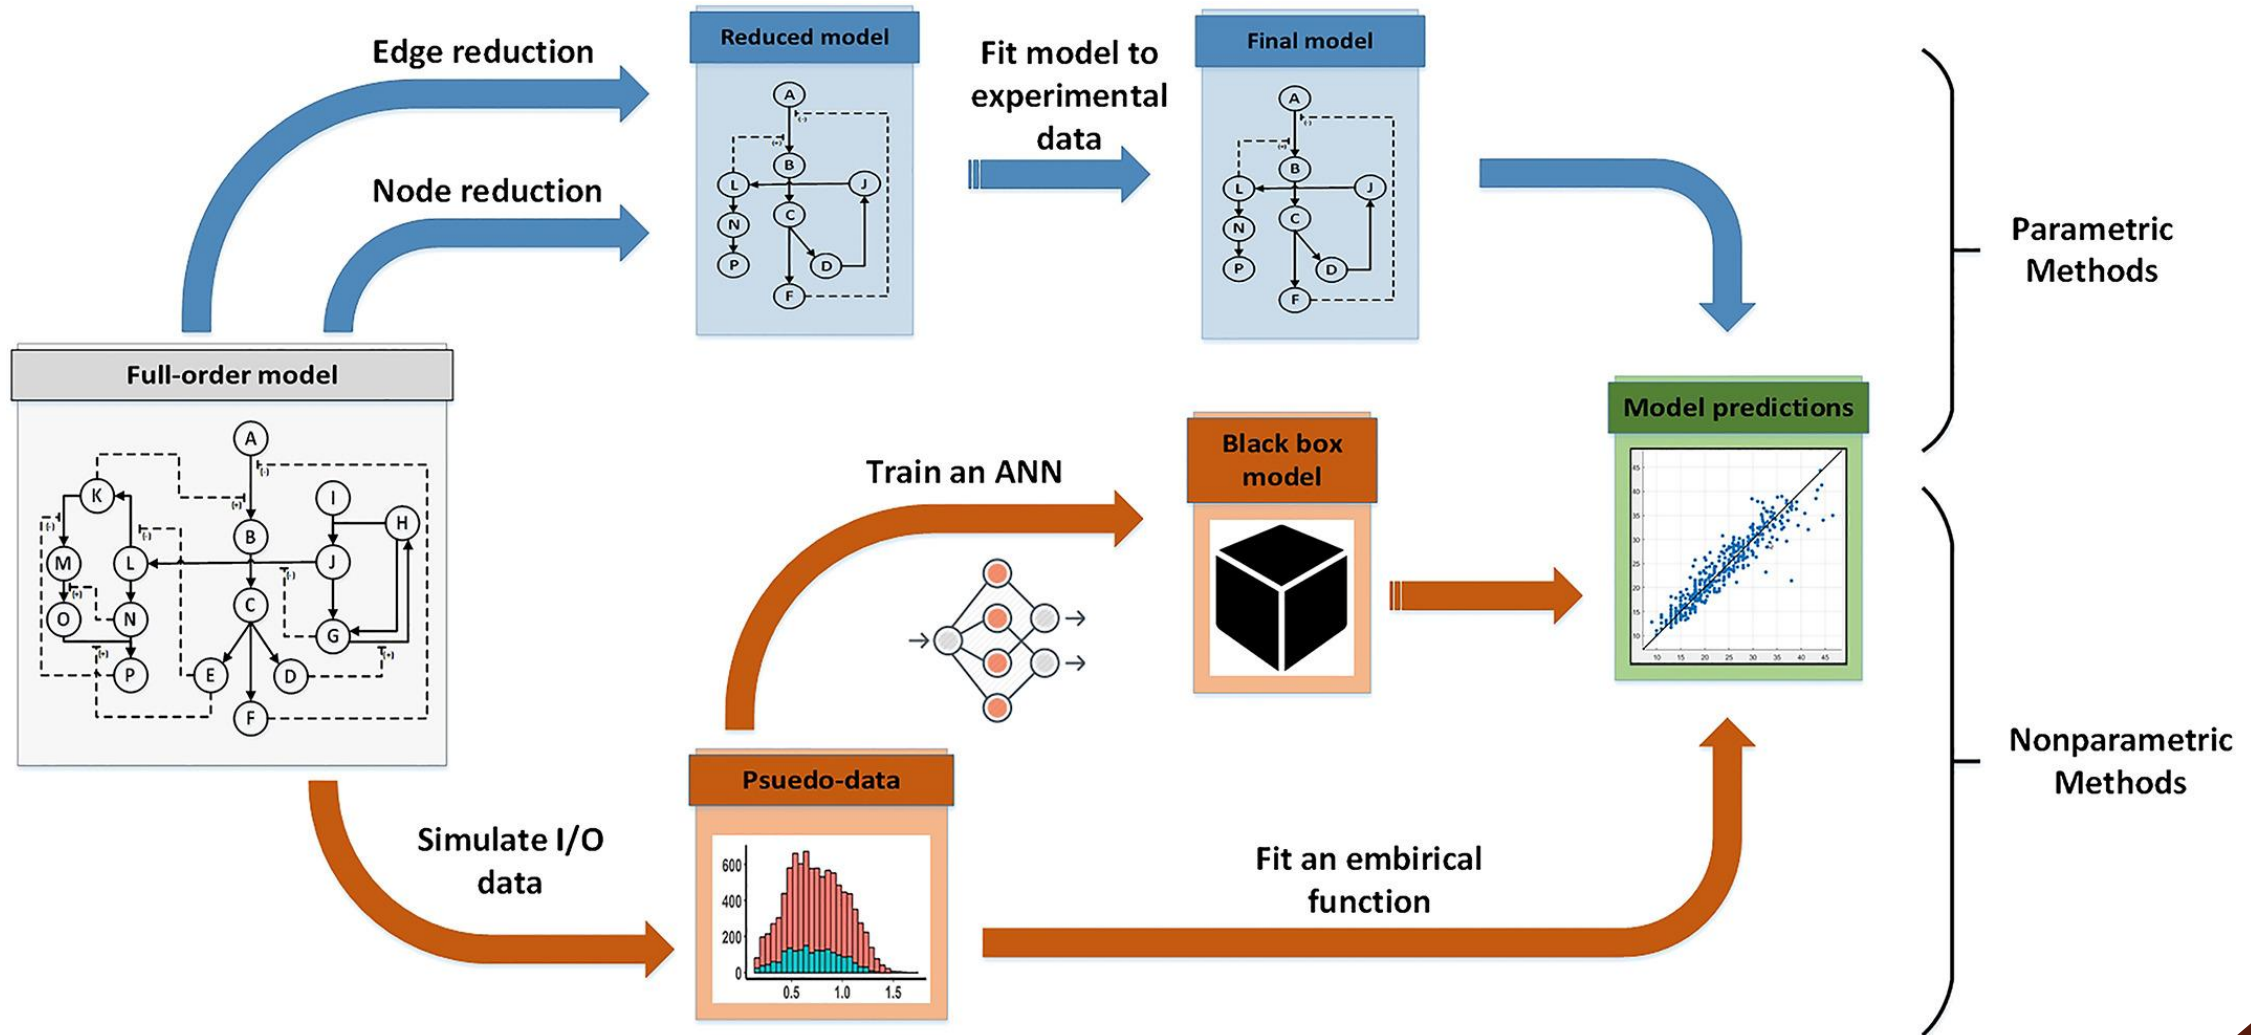

Designing a Control System

The Coagulation network model

QSP model simplification approaches

The ML approach

Results

- Distribution of Normalised training and evaluation errors of different networks architectures

- Computational cost for neural networks with different performance levels

Network	Hidden nodes	Parameters	Training time (seconds)	Simulation time (seconds)*
A	7	73	2.8	0.018
B	11	77	6.5	0.018
C	15	97	16.3	0.027
D	25	179	51	0.022

* For 10,000 pairs of input-output data

- ML-based model simplification has several advantages:
 - Automatable
 - Efficient
 - Accurate
 - Structure agnostic
 - Experimental data independent
- A limitation is being non-parametric method
