

BW Fusion's AmiNo™ Increasing Vitality for Corn and Soybean

AmiNo™ is a cutting-edge foliar nitrogen product designed to boost crop nutrient efficiency. By reducing nitrate demand and incorporating molybdenum, AmiNo™ maximizes nitrogen efficiency, ensuring your corn and soybeans reach their full potential.

Trial Overview:

Over a two-year trial across the Midwest, AmiNo™ proved its prowess in enhancing nutrient uptake. By aiding protein synthesis, it conserves plant energy and supplies essential nutrients, ultimately **increasing corn and soybean yields.**

AmiNo: Versatility That Delivers!

Trial Results:

AmiNo™ tackled nutrient deficiencies head-on, delivering outstanding results in national case studies. With an **8 bushels/acre increase in corn** and a **5.5 bushels/acre increase in soybeans**, AmiNo™ achieved a remarkable **win rate of over 78%** compared to standard grower practices. Proven and reliable, AmiNo™ is the go-to solution for boosting your crop's vitality.

Contact BW Fusion

BW Fusion's extensive network of sales representatives, many of whom are farmers themselves, work closely with technical agronomists to ensure farmers maximize the value of our products. Committed to solutions that drive both profitability and sustainability, BW Fusion stands ready to support your farming needs.
