IF YOU SEE AN OE FIX® SOLUTION
YOU KNOW IT'S BETTER THAN OEM.

Dorman gives repair professionals and vehicle owners greater freedom to fix motor vehicles. For over 100 years, we have been driving new solutions for the aftermarket, releasing tens of thousands of replacement products engineered to save time and money, and increase convenience and reliability. When you see a Dorman product marked OE FIX®, that means it's designed to offer a better repair solution than the OEM.

THE OE FIX® ADVANTAGE

DESIGNED TO DELIVER ONE OR MORE OF THE FOLLOWING:

- Easier installs
- Upgraded materials
- New protective features
- Time-saving designs
- Savings on parts & specialty tools

THE DORMAN ADVANTAGE

Pricing Valid as of 11/1/2026 and expires 11/30/2026 but is subject to change based on external factors.
Any changes to pricing will be disclosed prior to purchase.

4WD Locking Hub Actuator

NOE 600-034
Ford Bronco 2022-24, Expedition 2016-21, F-150 2016-20, Lincoln Navigator 2016-21

PROBLEM: When the original equipment 4WD locking hub actuator on certain Ford and Lincoln SUVs and trucks fails because the internal diaphragm has cracked and caused a vacuum leak, the dealer repair solution is to offer the same factory design, inviting similar future failures.

FIX: This Dorman® OE FIX® locking hub actuator is powder coated and features an upgraded diaphragm material that is more resistant to wear and environmental contaminants than the factory diaphragm to offer a more permanent repair.

Camshaft Phaser

NOE 916-776
Ford Expedition 2025-17, F-150, Lobo 2025-16, Lincoln Navigator 2025-17

PROBLEM: Optimal long-term performance of a variable valve timing (VVT) system requires a reliable and rugged cam phaser, also known as a timing sprocket. The factory phasers on certain Ford and Lincoln trucks and SUVs with a 3.5L V6 EcoBoost engine can fail prematurely from excessive internal wear.

FIX: This Dorman® OE FIX® intake cam phaser features upgraded locking pin and oil wiper designs for quieter operation, improved sealing and longer service life than the original equipment. Tested to simulate 50,000 miles of driving, it delivers a durable, long-lasting repair. Includes a special service tool for easier installation.

Oil Filter Housing Assembly

NOE 926-525
BMW i8 2020-14, X1 2019-16, X2 2019-18, Mini Cooper 2019-14, Clubman 2019-16, Countryman 2024-17

PROBLEM: The oil filter adapter on certain BMW vehicles often leaks oil when its plastic housing warps from harsh underhood conditions. As the plastic eventually degrades from heat and chemical exposure, it can even crack from simply tightening the oil filter cap during oil changes. When it fails, replacing it with an OEM housing could mean the same issues again in the future.

FIX: This upgraded Dorman® OE FIX® filter housing is made entirely of aluminum for a more durable replacement of the failure-prone OEM housing to help prevent future leaks. The housing comes complete with mounting gaskets for an effective repair. The kit also includes the oil cooler, oil filter element and oil filter cap.

Heater Hose Repair Kit

NOE 47298
Chrysler 300 2023-05, Dodge Challenger 2023-08, Charger 2023-11

PROBLEM: The dealer solution for fixing a failed original plastic coolant hose connector on certain Dodge and Chrysler vehicles usually requires replacing the entire coolant hose assembly.

FIX: This Dorman® OE FIX® coolant hose connector is made from aluminum for greater durability and saves expense by allowing the replacement of just the failed connector.

Metal Heater Hose Connectors

5/8 x 5/8 In., 90 Degree

NOE 800-416HP
Ford 2003-2017 and 2001, Lincoln 2003-2017

PROBLEM: When a plastic original equipment HVAC heater hose connector becomes brittle from heat and abrasion, and cracks, leaks and breaks free from the heater hose, the dealership solution is a similar plastic replacement.

FIX: Avoid a similar future failure by upgrading your repair with a rugged Dorman® OE FIX® metal connector. Designed to match the performance of the factory design but engineered to far exceed its service life, these sturdy and reliable replacement connectors are manufactured to precise standards for a seamless fit on specified vehicles.

Transmission Oil Pan

NOE 265-973
Cadillac 2015-09, Chevrolet 2023-12, GMC 2023-20

PROBLEM: On certain GM vehicles, when an original equipment transmission pan is leaking or in need of routine service, loosening and lowering that fluid-filled pan is a messy business.

FIX: This Dorman® OE FIX® transmission oil pan is designed to match the performance of the original equipment pan but features a convenient drain plug to allow the transmission fluid to be removed before service. This steel pan is also upgraded with an E-coat finish for excellent resistance to corrosion, and includes a filter assembly, gasket and integrated magnet for a complete repair solution.

Turbocharger Line Replacement Kit

NOE 667-384
Ford Bronco 2023-21, Explorer 2023-20, Ranger 2023-19

PROBLEM: Replacing a turbocharger? Make a thorough and professional repair on specified Ford vehicles with this convenient turbo line replacement kit and replace all the old oil and coolant lines and connectors.

FIX: Save time and money with an application-specific set of four try-on tested components, including our 667-382 Dorman® OE FIX® turbo coolant feed line. This upgraded feed line is made of braided stainless steel engineered to offer better resistance to leaks than the original equipment rubber line. The kit also contains a 667-380 oil feed line, 667-381 oil feed line and 667-383 coolant return line.

For more information, or to find complete vehicle applications, visit **NAPAProLink.com**.

DORMAN® OE FIX® SKUS AVAILABLE AT NAPA

Engine Oil Pans

NOE 264-791
Ford F-150 2017-15

NOE 264-792
Ford F-150 2024-18

PROBLEM: When the plastic lower half of the original equipment two-piece engine oil pan on certain Ford F-150 trucks, Expedition SUVs and Lincoln Navigator SUVs warps from heat or cracks from impact, the dealership's repair solution is to replace that failed lower half with the same plastic design. This only invites a similar future pan failure and leaks. The dealership's process requires applying a large amount of silicone sealant between the replacement lower half and the existing aluminum upper half of the pan, which means the vehicle has to be out of commission for a significant and inconvenient period of time while the sealant cures.

FIX: This Dorman® OE FIX® oil pan design replaces that original equipment disposable pan section with a lower pan half made of rugged high-pressure diecast aluminum more resistant to heat, corrosion and impact. For a faster and more predictable repair, this pan is engineered to use a replaceable, press-in gasket and requires a minimal amount of sealant for a secure, leak-proof fit. The included convenient magnetic drain plug also features an angled mount boss that enables a complete drain.

HVAC Heater Hose Assembly

NOE 626-370
Ford Expedition 2021-18,
Lincoln Navigator 2021-18

PROBLEM: Original equipment HVAC heater hose assemblies often fail due to cracks in the plastic Y-connector.

FIX: This Dorman® OE FIX® replacement features an upgraded aluminum Y-connector to prevent similar failures in the future.

Loaded Knuckles

NOE 686-276 (RR)
NOE 686-277 (RL)
Ford Explorer 2019-11

PROBLEM: When an original equipment wheel hub assembly is due for replacement on certain Ford Explorer SUVs, the job can become difficult because rust has grown between the surfaces of the steering knuckle and the wheel hub bearing, ultimately resulting in the two assemblies seizing together.

FIX: This loaded Dorman® OE FIX® steering knuckle offers the labor-saving convenience of being pre-assembled and features a patent-pending and proprietary coating that helps prevent corrosion between surfaces, providing a more permanent and reliable repair than the factory knuckle design. This kit includes all the needed components already assembled for a fast, simple, safe installation. Each kit includes a new rear knuckle, wheel bearing, hub and application-specific hardware.

Engine Intake Manifold Runner Control Lever

NOE 911-929A
Chevrolet Cruze 2015-11, Cruze Limited 2016, Sonic 2018-12

PROBLEM: A P2076 code on certain Chevrolet Cruze or Sonic models equipped with 1.8L ECOTEC engines often means the factory tuning arm disconnected from and disabled the intake manifold runner control (IMRC) valve assembly. Over time and miles, the arm's weak plastic ball can wear to a nub, lose its connection to the assembly linkage and can cause the IMRC motor to burn out. The dealer's repair solution is to have you purchase a costly new intake manifold that utilizes the same weak link in the IMRC tuning arm setup, inviting a similar failure down the road.

FIX: This Dorman® OE FIX® IMRC tuning arm saves serious money, time and hassle by allowing you to replace just the worn-out factory arm. Instead of a doomed plastic connecting ball, this arm features a rugged brass ball stud that is designed for a more secure, longer-lasting connection to the motor assembly. It requires no special tools to install, and saves money and repair time by allowing the replacement of just the failed factory arm. Its improved design is made to solidly capture the existing linkage, provide increased service life and reduce future related repair costs.

Turbocharger Actuator

NOE 668-536
Dodge Ram 2500, 3500, 4500, 5500 2024-13, 4000 2013

PROBLEM: The original equipment variable geometry turbocharger (VGT) actuator on certain Ram trucks equipped with 6.7L I6 engines can fail when the motor's solderless compliant pins separate from the printed circuit board assembly (PCBA).

FIX: This Dorman® OE FIX® VGT actuator is upgraded with soldered compliant pins for a more secure and trouble-free connection to the PCBA. The actuator is remanufactured to the highest industry standards in the USA at our advanced electronics facility, and thoroughly tested to help restore factory-spec turbo output.

4WD Locking Hub Actuator

NOE 600-034
Ford Bronco 2022-24, Expedition 2016-21, F-150 2016-20, Lincoln Navigator 2016-21

PROBLEM: When the original equipment 4WD locking hub actuator on certain Ford and Lincoln SUVs and trucks fails because the internal diaphragm has cracked and caused a vacuum leak, the dealer repair solution is to offer the same factory design, inviting similar future failures.

FIX: This Dorman® OE FIX® locking hub actuator features an upgraded diaphragm material that is more resistant to wear and environmental contaminants than the factory diaphragm to offer a permanent repair.

Pricing Valid as of 11/1/2026 and expires 11/30/2026 but is subject to change based on external factors.
Any changes to pricing will be disclosed prior to purchase.

Automatic Transmission Oil Cooler Hose Assembly

NOE 724-132
Cadillac Escalade 2013-09, Chevrolet Tahoe 2013-08, GMC Yukon 2013-08

PROBLEM: The original equipment automatic transmission oil cooler line assembly on certain Cadillac Escalade, Chevrolet Tahoe and GMC Yukon trucks uses crimped connections between the lines and the bypass valve. That means that when a line leaks or fails from rust or fatigue, the dealer's only repair solution is to replace the entire assembly.

FIX: This Dorman® OE FIX® assembly replaces the crimped connection with a threaded connection for simpler and less expensive serviceability than the factory design, and ensures a secure, leak-free seal for proper fluid flow that helps protect the transmission.

Engine Air Intake Hose

NOE 696-222
Ram ProMaster 1500, 2500, 3500 2021-14

PROBLEM: On certain Ram ProMaster vans, when the rubber boot cracks and fails from fatigue on the original equipment engine air intake hose, the dealer requires replacing the entire intake hose assembly.

FIX: This Dorman® OE FIX® boot offers a reliable repair solution and saves expense by allowing the replacement of just the failed hose section.

Engine Oil Filter Adapter

NOE 926-611
Genesis G80 2020-17, Hyundai Genesis 2016, Palisade 2024-20, Kia Cadenza 2020-17, Sedona 2021-19, Sorento 2020-19, Telluride 2024-20

PROBLEM: The oil filter adapter on certain vehicles often leaks oil when its plastic housing warps from harsh underhood conditions. As the plastic eventually degrades from heat and chemical exposure, it can even crack from simply tightening the oil filter cap during oil changes.

FIX: This Dorman® OE FIX® filter housing is made entirely of aluminum for a more durable replacement of the failure-prone OEM housing to help prevent future leaks. The housing comes complete with mounting gaskets for an effective repair.

Trunk Lid Release Switch

NOE 926-821
Dodge Charger 2023-15

PROBLEM: When an original equipment trunk exterior release switch fails from corrosion on certain Dodge Charger models, the dealership repair solution requires purchasing and installing the entire costly tail light panel.

FIX: This Dorman® OE FIX® trunk lid release switch allows the replacement of just the inoperable switch, restoring the function of the factory switch and saving significant time and cost. The switch is designed to match the performance of the original and is constructed from rugged materials and internal components for long, reliable service life on specified vehicles.

Auxiliary A/C Evaporator and Heater Hose Assembly

NOE 926-965
Chrysler Town & Country 2016-12, Dodge Grand Caravan 2017-12, Ram C/V 2015-12

PROBLEM: Replacing a failed rear air conditioning (A/C) line in certain Chrysler Town & Country, Dodge Grand Caravan and Ram C/V Tradesman cargo vans can be a time-consuming hassle if you use the dealer's one-piece original equipment line.

FIX: Replace that failed line instead with this Dorman® OE FIX® three-piece line, and save the aggravation. The three sections securely seal together with a threaded fitting for a faster A/C repair that lasts and gets the van back on the road faster.

Air Suspension Compressor Line Repair Kit

NOE 949-018
Jeep Grand Cherokee 2021-11, Ram 1500 2018-13

PROBLEM: On certain Chrysler vehicles equipped with air suspension systems, when a compressor air line cracks from corrosion or fatigue or breaks during repairs to suspension strut springs, the dealer only sells the entire costly line assembly.

FIX: This Dorman® OE FIX® repair kit allows the replacement of just a failed fitting that's typically the cause, saving labor time and significant expense. The kit contains a familiar push-to-connect fitting that can easily be connected onto air lines for a secure and professional repair that will help restore proper function of the air suspension system.

Engine Coolant Thermostat Housing

NOE 902-5190XD
Acura CSX 2011-06, ILX 2015-13, TSX 2014-04, Honda Accord 2012-03, Civic 2015-06, CR-V 2014-07, Crosstour 2015-12, Element 2011-03

PROBLEM: The original engine coolant thermostat housing on certain vehicles is made from plastic that becomes brittle over time, eventually leading to cracks in the plastic welds and fluid leaks that can damage the cooling system.

FIX: This Dorman® OE FIX® coolant thermostat housing is manufactured from corrosion-resistant aluminum to better withstand underhood temperature extremes, resist leaks, reduce future maintenance costs and provide increased coolant system protection.

Power Steering Pressure Hose

NOE 926-531
Chrysler Town & Country 2016-11, Dodge Grand Caravan 2020-11, Ram C/V 2015-12

PROBLEM: The original equipment power steering crossover line assembly on certain Chrysler, Dodge and Ram vans can fail due to a corroded or rotted metal line. The dealer repair solution is costly, requiring the replacement of the entire steering rack assembly that includes the same rust-prone line.

FIX: This Dorman® OE FIX® crossover line allows the replacement of just the failed line section and is made of more durable stainless steel for a longer lasting and more reliable repair that helps ensure proper pressurization of the power steering system.

NATIONAL SIGNING DAY – SUPERSTARS SIGN TO TRADE SCHOOLS

The future of the automotive industry deserves to be recognized and celebrated. NAPA and SkillsUSA are on a mission to highlight students for their commitment to the skilled trades. On May 6, NAPA recognized six outstanding students at Truist Park. Much like a student-athlete signing with a Division I program, these students signed letters of intent to pursue careers in the skilled trades.

Each student received a full Carlyle tool set and a $2,500 scholarship to help kickstart their journey. Representing schools across Georgia, the students plan to pursue training in diesel equipment technology, motorsports, and automotive programs.

SkillsUSA Signing Day continues to gain momentum across the country, with thousands of students signing letters of intent to trade schools each year. The event not only celebrates student achievement but also shines a spotlight on the growing demand for skilled technicians. According to TechForce, more than 750,000 technicians will be needed by 2028.

By recognizing students at the beginning of their careers and providing them with the tools and support to succeed, NAPA is helping elevate the perception of the skilled trades while encouraging more young people to consider these high-demand career paths.

As a national and state SkillsUSA partner, NAPA sponsored the National Signing Day program. With the skilled trades facing a real workforce shortage, this is one example of how NAPA is investing in the talent pipeline and demonstrating that a four-year degree is not the only path to a successful and rewarding career.

OIL FILTER HOUSING ASSEMBLIES

The Factory-assembled, Drop-In Replacement

Tech Expert® Oil Filter Housing Assemblies arrive completely assembled from the factory. The assemblies include the correct oil filter, cap, bypass valve, heat exchanger (cooler), gaskets, mounting hardware and required sensors.

To help keep the oil cool, Tech Expert® Oil Filter Housings are made from Zytel®, a high-strength, synthetic material that matches the heat dissipating characteristics of the OE design.

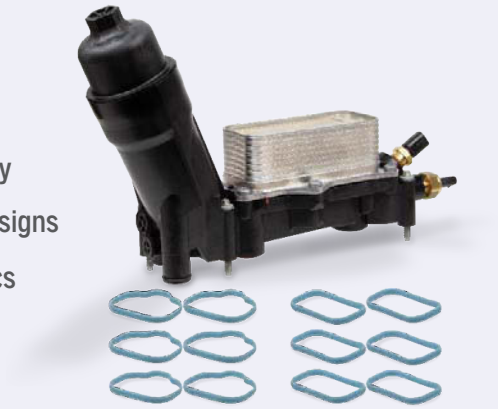

COMPETITOR

- Not assembled; No sensors
- Universal design and cataloging
- Different thermal characteristics from OE design

TECH EXPERT

- Factory-assembled; sensors included and torqued correctly
- Year/make/model-specific designs
- Correct thermal characteristics
