

TF Energy

Installation Completion Guide

Dear Sir/Madam,

Thank you for allowing TF Energy into your home for the property's energy efficiency improvements. We are pleased to announce that the works on your property have been successfully completed.

To ensure that you have all the information you need, please find the following important details below.

Completion of Work Report Photographic Evidence

Upon completion of all works, one of our skilled team members will carry out a comprehensive "Completion of Work" report. This report serves as an official document detailing the services provided, components installed, and work executed on your property. This report is submitted to BCL along with warranties and guarantees and kept on record.

For added assurance, we will supplement the Completion of Work report with photographic evidence. This serves to document the quality and completeness of the work carried out.

Equipment Operation Walk-Through Manuals and Warranties

A team member will guide you through a walk-through of your property to explain how to operate any installed equipment, such as ventilation systems, air source heat pumps, or solar battery storage units.

All necessary operating manuals and warranties for installed equipment will be left with you for your reference and peace of mind.
