

CLEANING NOTES FOR PREFA COLOUR ALUMINIUM BANDS

TECHNICAL INFO

MAINTENANCE AND CLEANING

Roof and façade can be particularly exposed to changing weather conditions.

Sun and wind, rain and snow, permanent dampness (in the forest or in permanent shadow) have an impact on the building shell. Sediments (such as dust, leaves, needles...) can affect the function and visual appearance of roof, façade and gutters (such as congestion). That is why roof, façade and gutters should be checked from time to time in order to eliminate changes, staining, damages or secondary damages early enough.

TIPS FOR MAINTAINING AND CLEANING PREFA COLOUR ALUMINIUM BANDS

LIGHT STAINING SUCH AS DUST

- Clear, lukewarm water;
- Cleaning or caring products for car finish (non-abrasive!)

HEAVY STAINING SUCH AS OIL AND FAT

- Conventional car polish;
- Suitable general-purpose cleaner (e.g. Innotec Easy Clean) → observe manufacturer's instructions!

ATTENTION

- Rinse with clear water carefully after every cleaning
- Do not clean the roof, façade or gutters while exposed to direct sunlight
- Note the processing instructions and producer guidelines of the detergents
- Never use acetone, nitro-cellulose combination thinner or similar thinners, or abrasive products!
