SUSHI CABINETS

PROUDLY DISPLAY YOUR FRESH FISH, MEAT AND PERISHABLE PRODUCTS

Our line of refrigerated display cases combine innovative features with a modern and elegant design, and are configured to highlight and preserve the freshness of even the most delicate fish types.

The range is designed to maintain the most natural level of humidity and food-safe temperatures, even during peak serving times with frequent door openings.

The airflow created by the refrigeration effect of the evaporator is smooth and diffused. This method creates ideal conditions avoiding unpleasant dehydration and weight loss of the stored goods.

1

Tubular-shaped evaporator absorbs the heat continuously. Condensation freezes on its external surface, maintaining an attractive frost layer with no dripping.

2

Practical anti-slip top: Ideal to place serving dishes.

3

Sliding door with 150mm height, easily disassembled and removed for daily cleaning.

4

Curved glass for optimal visibility of the displayed food. With anti-shatter film for glass splinter protection.

5

Effortlessly control temperature with lightweight ABS trays featuring a wave-shaped profile. These trays can be flipped to adjust food contact with cold surfaces, allowing for customizable cooling impact and swift temperature control.

6

The condensing unit of all our models sit on the right-hand side.
