CONGENITAL HEART DEFECT AWARENESS DAY PROGRAM

📅 Date: 10/02/2026

🕒 Time: 10:00 AM– 11:00 AM

📍 Venue: 4th floor, Tech Block

👤 Resource Person: **Dr. R. Ashwene, MBBS, DNB (CTVS), Head of the Department, Cardiothoracic surgery, SRMMCH&RC, Tiruchirappalli Campus.**

The session provided an extensive overview of structural abnormalities of the heart present at birth and are among the most common congenital disorders worldwide. These conditions range from simple defects requiring minimal intervention to complex cardiac anomalies that demand early and specialized medical care.

Congenital Heart Defect can lead to significant morbidity, delayed growth, reduced functional capacity, and increased mortality. Therefore, awareness and early detection play a crucial role in improving long-term outcomes and quality of life.

Through this expert-led interaction, students gained valuable insights into congenital cardiac conditions and the importance of awareness in prevention, early intervention, and long-term rehabilitation. This initiative reinforces the message that knowledge and awareness are the first steps toward better heart health and improved patient outcomes.
