

AMI Paint Selection Chart

The craftsmen at Architectural Metals have extensive experience in helping you design the best possible aluminum finish solution. We're relentless in quality control, and our shipping team will get your products to you without damage and on time.

Due to limitations in the printing process, variations will occur between the colors in this chart and the actual colors. The selection of actual colors should be conducted using color chips. To order samples, please email info@archmetal.com or reach out to your sales representative. AMI is an approved AAMA 2605 applicator.

Please verify the standard availability of additional colors.
