# Waterjet Cutting

## Waterjet Cutting has Distinct Advantages.

Waterjets can cut any solid material including stone, tile, glass, metal, foam, wood, rubber, plastic.

When compared with plasma, laser and edm, waterjet cutting has distinct advantages.

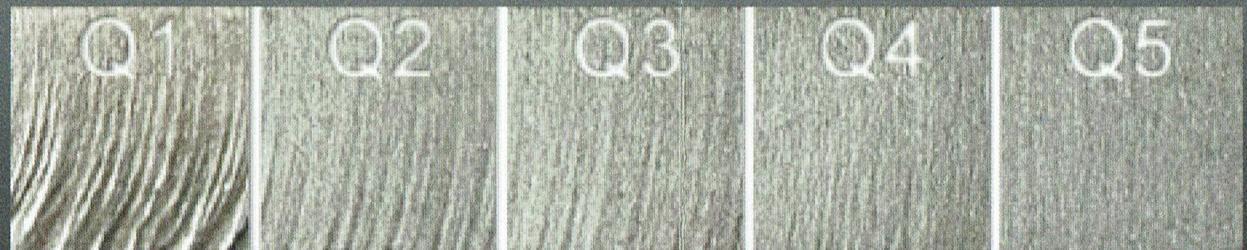

- Cut virtually any material.
- No heat affected zones.
- No mechanical stresses.
- Thin stream (0.020 to 0.050 inch in diameter).
- Thin material cutting.
- Up to 10 inch thick cutting.
- Stack cutting.
- Little material loss with nesting software.
- Reduced secondary operations.
- Little or no burr.
- Quick turn around.
- Delivery.
- Cutting of our material or yours.

# Coastal Fabrication Company

## Waterjet Cutting Edge Qualities.

The image shown below, will help determine your requirements and also be an example of what you can expect on your parts.

Depending on what the cut pieces will be used for, your cuts may require different edge qualities. The Edge Quality directly affects the cost of the job, because it requires more or less time depending on the edge quality chosen. You could ask two different companies for quotes to cut the same piece, out of the same material, and get two vastly different quotes because of the edge qualities. When getting quotes on waterjet cutting, always determine what edge quality you require for your project.
