

**Person-Centered, System-Level Data:** A critical aspect of the statutes governing federal homeless assistance funding and programs is a focus on viewing the local homeless response as a coordinated system of homeless assistance options as opposed to homeless assistance programs and funding sources that operate independently in a community. As the designated Collaborative Applicant for the Greater Richmond Continuum of Care, Homeward submits reports to the US Department of Housing and Urban Development. HUD publishes summary data from the Point-in-Time (PIT) count and Housing Inventory Count (HIC), which provide an overview of a Continuum of Care's (CoC) performance in serving homeless individuals with their CoC funding awards. While the *reports* are public, the underlying data is derived from the Homeless Management Information System (HMIS), which operates under strict privacy and security standards to protect personal client information. The Greater Richmond Continuum of Care is known by the identifier "VA-500." Data are available here:

Homeward also provides the required data for the **Longitudinal System Analysis report** (LSA) that HUD uses to publish the Annual Homelessness Assessment Report (AHAR) for Congress. The LSA reports for individual CoC's are not publicly available. The AHAR is published by HUD and can be found here: <https://www.hudexchange.info/homelessness-assistance/ahar/#2024-reports>.
