

LeafSolution MITERS

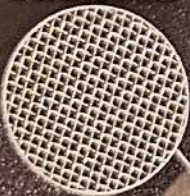

FEATURES

- Enlarges open area in the miter by 40% to handle increased water volumes in those areas
- (inside, straight and inside bay only- outside bay and outside miter are flush with front of gutter)
- Constructed from sturdy .024" aluminum and stainless steel mesh construction
- Eliminates the need for valley shields or diverters that act as a debris trap
- Screws directly to the fascia and front lip of gutter to create strength and stability
- Integrated screen reinforcements eliminate screen deformation under load
- Use of the miters eliminates the need to cut compound miters on the Leaf Solution product
- Low profile design in height creates an unobtrusive appearance

Miters are also available with Hi Flow mesh that has larger openings, handling heavier volumes of water.
