

EXECUTE is an amino-acid based fertilizer that combines premium plant enhancement technologies that maximize efficiency and plant performance. EXECUTE is designed to be used with a complete plant nutrition program recommended for use as part of a balanced fertilization program to support optimum plant health, growth and development.

#### AMINO NITROGEN

used efficiently by plants in building their own proteins.

#### MICROBE FOOD

provides a balance of nitrogen and carbon and aids in the uptake of nutrients.

#### INCREASES YIELD

by enhancing plant metabolism.

#### HIGH COMPATIBILITY

Mixes with all or most fertilizers and is versatile so it can be applied directly to the soil, in-furrow or 2"x 2", with side-dress & top-dress applications, foliar and through fertigation.

Use in transplant water or seed treatment.

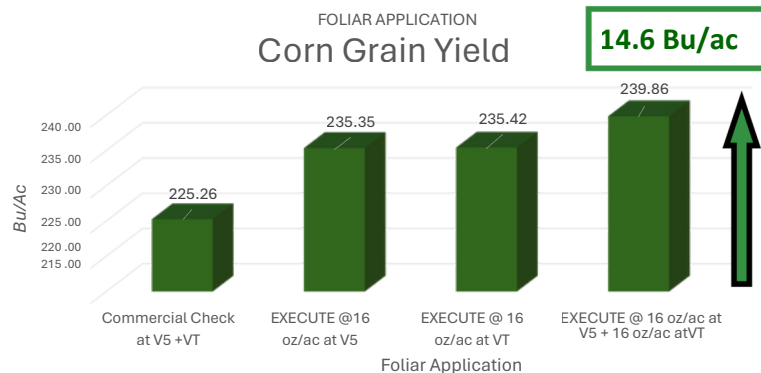

#### CROP RECOMMENDATIONS:

**Foliar application:** During plant growth and development, make up to five applications of EXECUTE at a rate of 1-2 pints/ac, repeating at critical growth stages as needed.

**Soil application:** Apply EXECUTE directly to the soil alone or with nutrient solutions at 1-2 qt/ac at planting.

**Top-dress, with Nitrogen solutions:** Apply EXECUTE at 1 qt/15 gals of nitrogen solution.

**Fertigation:** EXECUTE can be applied with irrigation water, at a rate of 1-4 qt/ac.

Use EXECUTE in your foliar applications during periods of high environmental stress such as during tasseling for corn (VT) and flowering and pod set (R1-R3) for soybeans.

#### IMPROVE PERFORMANCE DURING:

- High heat conditions
- Temporary drought
- At key growth stages
- Hail & mechanical damage
- Abiotic stress conditions in general
