

RIZONFINISH

Strong finish. Maximize grain and pod fill.

RizonFinish is a slow-release foliar nitrogen and micronutrient package built for the end of the season, when the crop's final yield potential is being written. Its triazone-based nitrogen provides an extended 10–14 day availability curve for consistent feeding, while potassium, sulfur, boron, and molybdenum work together to support reproductive integrity, sugar movement, and starch deposition. The result is more efficient grain fill, pod fill, and a stronger finish under stress.

Nutrient Features:

- SRN
- K-thio
- Sulfur
- Boron
- Molybdenum

- ✓ Extended triazone nitrogen release for steady feeding
- ✓ Boron + molybdenum for reproductive development and sugar regulation
- ✓ Potassium for stress mitigation and nutrient movement
- ✓ Supports kernel depth, pod retention, and standability when combined with late fungicide applications
- ✓ Excellent crop safety and minimal corrosiveness

Available in 275 gallon totes and bulk.

Directions for use:

Foliar Application: Fill spray tank with water prior to adding fertilizer or other products. Use only as a supplement to a regular nutrient management program. Repeat applications for maximum performance. Do not apply when crop is excessively stressed for moisture or during periods of high temperatures. For field and row crops, apply foliar at a rate of 1 - 2 gallon per acre as the plant requires.

Use in accordance with the recommendation of a qualified institution or individual.

Do not allow to freeze.

Pairs well with:

Most Pesticide and Fungicide Applications
NanoPro / NanoN+
Sugar Sweet
