### GENERAL INFORMATION:

RizonFinish is a formulation of slow release nitrogen along with potassium, sulfur, boron and molybdenum. It is designed to be foliar applied and is formulated as a triazone for improved crop safety and minimal corrosiveness. Boron and molybdenum are involved in the plant development and the regulation of sugars and starches throughout the plant. Estimated release pattern is 10 to 14 days after application.

### DIRECTIONS FOR USE:

**Foliar Application:** Fill spray tank with water prior to adding fertilizer or other products. Use only as a supplement to a regular nutrient management program. Repeat applications for maximum performance. Do not apply when crop is excessively stressed for moisture or during periods of high temperatures. For field and row crops, apply foliar at a rate of 1 - 2 gallon per acre as the plant requires.

Use in accordance with the recommendations of a qualified institution or individual. DO NOT ALLOW TO FREEZE.
