

RediRail™ is a regular length of cattle rail with a specially registered design of one swaged end, so that each length slots right into the next rail.

The one of a kind RediRail™ design provides a smart and efficient solution to the joining of cattle rails. Speeding up the process of building cattle yards, saving users time and money, and as added bonus they look great too!

The process is so simple “RediRail™ speaks for itself!”

Product Information

Size and Measurements: 115mm x 42mm x 2.0mm
115mm x 42mm x 2.5mm

Production: Durable Steel, easy to handle, transport and assemble.

Design: Interconnecting swaged joints, allowing for easy connectability.
