

Project brief

TYPE OF FACILITY:

Office Building/Warehouse

Milton Hydro

■ Milton, Ontario, Canada

Milton Hydro Distribution Inc. is a power distribution company, which is responsible for distributing electricity to more than 31,000 business and residential customers within the town of Milton, Ontario. When the office building was in need of a new fire protection system Milton looked for a system with a quick and simple install process that would not require extensive construction.

The client chose to utilize the Victaulic Vortex[®] 500 fire suppression system in the facility's **server room**. This innovative system is self-contained, requires no additional piping and installs quickly without needing field calculation. Along with the ease and speed of installation the Victaulic Vortex 500 fire suppression system, reduces the cost of clean-up, requires minimal wetting and has a 100% green design. Milton Hydro recognized the benefits of the Victaulic Vortex 500 and said "compared to other special hazard systems we saved 9 hours of labor."

SPECIFICATIONS:

| SERVICES: | PIPE MATERIALS: | PIPE SIZE RANGE: |
