The **Nature School of Fairview** is a new, two-story, **10,000 sq. ft. free-standing building** designed to expand the existing Sulphur Springs campus. The project's core challenge is to seamlessly integrate a new structure into a natural site, preserving the existing landscape and gravel parking while ensuring **full code compliance** with all fire and local ordinances. To achieve this, DorianBahr will provide full architectural design for the new building, strategic space planning for its seven classrooms, offices, and meeting spaces, and meticulous site planning that preserves the existing landscape and parking. We will also create comprehensive **construction documentation** and manage the project from start to finish. Our services include planning for **future expansion**, with a conceptual vision for a treehouse and splash pad, showcasing our expertise in balancing new construction with a commitment to preserving the environment and meeting strict regulatory requirements.
