DRAVUS

CAPABILITY STATEMENT

WHO WE ARE

Formed in 2023, we are a specialist Completions, Commissioning, and Optimisation partner trusted by industry leaders across Australia.

Dravus is built on extensive project delivery experience in the mineral processing sector

Completions, Commissioning & Optimisation is our core

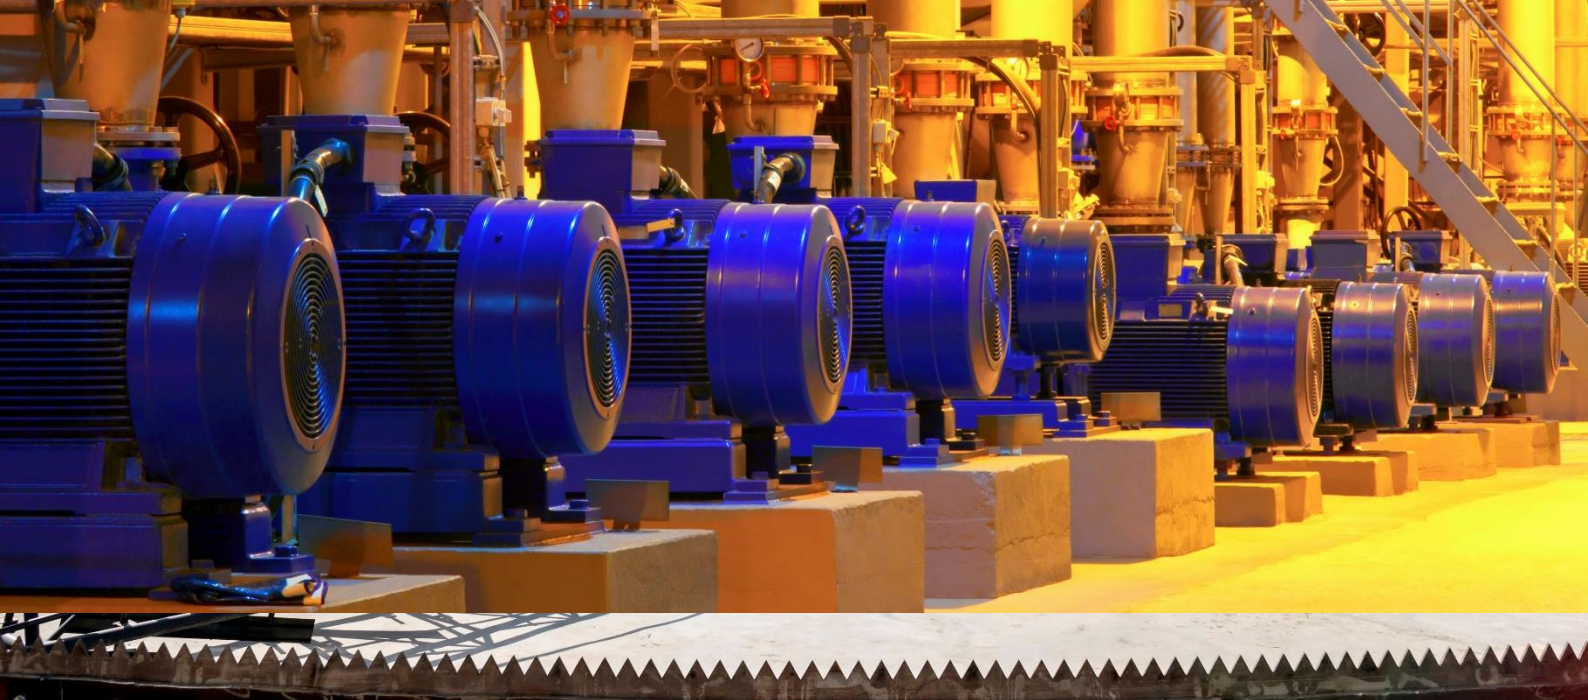

Trusted by Tier 1 and emerging mining operators

Over the past 12 months, Dravus has rapidly expanded to a team of over 90 highly skilled professionals, delivering high-impact outcomes on some of Western Australia's most exciting resource projects.

Our expertise spans the full lifecycle of asset readiness—from Completions and Commissioning, through to Ramp-Up, Optimisation, and Operational Handover. With extensive experience across lithium and other critical mineral processing infrastructure, we've become a go-to partner for major resource operators.

We support clients such as Covalent Lithium, Mineral Resources, Pilbara Minerals, Altrad and Woodside providing tailored solutions and hands-on delivery expertise across greenfield and brownfield environments.

At Dravus, we're not just service providers—we become embedded partners in project success. We believe in building long-term client relationships through performance, integrity, and operational excellence.

OUR TEAM

Ante Ljubicic – Managing Director

Ante is a highly experienced Completions and Commissioning Manager with over a decade of leadership in the delivery of complex mineral processing projects across Western Australia. Ante has successfully managed multidisciplinary teams through all phases of completions, commissioning, and ramp-up in both greenfield and brownfield environments. As Managing Director of Dravus, he drives the company's strategic direction while remaining actively involved in project execution—ensuring disciplined, safe, and efficient outcomes for clients. His leadership has been instrumental in growing Dravus into a trusted partner for our clients across the mining and energy sectors.

Subhadip Biswas – Commissioning Manager

Subhadip is an accomplished Commissioning Manager with over 20 years of experience in the delivery of complex projects across the oil and gas, hydrogen, mineral processing and energy sectors. With a strong mechanical engineering background, he has led commissioning and start-up activities for a wide range of process facilities, including hydrogen generation plants, gas infrastructure, mineral processing plants and power generation plants. Subhadip brings a disciplined, methodical approach to technically demanding environments, making him a key asset in Dravus' continued expansion into energy transition and decarbonisation projects.

Helen Trbuhovic – HR Manager

Helen brings over a decade of human resources and workforce management experience across the resources, engineering, and professional services sectors. Prior to joining Dravus, Helen held senior HR leadership roles, where she led regional HR operations, workforce planning, and shared services across Australasia. As HR Manager at Dravus, Helen plays a critical role in shaping our people strategy, fostering a high-performance culture, and supporting our continued growth across the resources and energy sectors.

OUR SERVICES

Completions

Dravus provides end-to-end completions services that ensure a seamless and systematic transition from construction to commissioning. Key aspects of our completions services include:

- Detailed pre-commissioning planning and project systemisation
- Establishment and management of project specific completions databases and systems
- Development of ITP's, ITR's, FTR's and Matrices to support project traceability
- Attend and oversee FAT and punch list walkdown management
- Lead site-based pre-commissioning execution
- Ensure readiness for commissioning through structured and disciplined delivery

Commissioning

Dravus delivers structured and dependable commissioning solutions across greenfield and brownfield projects, whether engaged early during FEED or later in the project lifecycle to ensure successful handover. Key aspects of our commissioning services include:

- Supporting early-stage FEED planning or late-stage project recovery
- Development of commissioning strategies, documentation, and schedules
- Implementation of safety systems including risk assessments, isolations, and permit to work processes
- Deliver safe and efficient energisation through to client handover
- Management and execution of multidisciplinary commissioning scopes including mechanical, electrical, instrumentation and process

Ramp-Up & Optimisation

Dravus provides support during the critical transition from commissioning to steady-state operations, ensuring performance targets are achieved efficiently and safely. Key aspects of this include:

- Development of operational readiness strategies and supporting documentation
- Deliver site-based training for operations personnel
- Conduct plant audits and performance analysis
- Identify and implement resolution of process plant bottlenecks
- Optimise unit operations to enhance efficiency and throughput
- Supporting overall improvement in plant recovery and stability

Key Projects and Clients

Over the past 12 months, Dravus has delivered specialist completions, commissioning, and operational readiness services across some of the most significant resource and energy projects in Western Australia and abroad, this includes:

- **Covalent Lithium – Refinery Project** Commissioning support for battery-grade lithium hydroxide refinery.
- **Pilbara Minerals – P1000 Expansion Project** Completions and commissioning of expanded lithium processing capacity.
- **Mineral Resources – Onslow Iron Project** Completions and Commissioning services for Iron Ore process plant infrastructure.
- **Mineral Resources – Hope Downs 4 Project** Commissioning services for Iron Ore process plant infrastructure.
- **PPS – Western Ranges Water Infrastructure Project** Completions and Commissioning of water supply infrastructure to support mine operations.
- **Altrad – Woodside H2 Perth Project** Completions and commissioning services for hydrogen production facility.
