CARE INSTRUCTIONS

To maintain the optimal appearance of your vehicle's paint, we'd like to share a few simple steps on how to care for your ceramic coating.

1. Regular Maintenance:

Routine care is important. Make sure to wash your vehicle regularly using a gentle automotive shampoo and a microfiber wash mitt. Avoid harsh chemicals, abrasive tools, or automatic car washes that can diminish the coating's effectiveness.

2. Drying:

After washing, dry your vehicle thoroughly using a soft, lint-free microfiber towel or a blow dryer on a cool setting. This will help prevent water spots and maintain the flawless appearance of your coating.

3. Occasional Detailing:

To enhance the shine and gloss of your vehicle, consider occasional detailing sessions using our recommended detailing products. These products will revitalize the coating and provide added protection and luster.

4. Professional Maintenance:

For optimal performance, we recommend scheduling periodic maintenance services with an authorized Huracán Nero detailer. These experts will ensure your coating remains in pristine condition and address any specific concerns.

At Huracán Nero, we are dedicated to providing you with the highest level of protection and long-lasting beauty for your vehicle. Following these care instructions will help maintain the superior performance of your ceramic

DO

- Use a touch-less automated wash
- Use Foam Cannon
- Use a PH balanced soap with no wax
- Wash in a cool shaded area
- Use a microfiber wash mitt
- Use microfiber drying towels

DON'T

- Use an automated brush wash
- Use a friction wash
- Use a hybrid wash
- Wash in direct sunlight
- Wash or polish the coating
- Use abrasive wash or drying towels

Washing Procedure

Wheels:

- Always clean wheels first.
- Clean one wheel at a time.
- Use a separate bucket for wheel cleaning.
- Spray off wheels to remove heavy debris.
- Spray wheel well liners to remove dirt and debris. if carpeted, spray until water coming off the bottom is clear. if plastic, use diluted all-purpose cleaner and scrub with a wheel well brush.
- For performance cars or those with brake dust issues, spray decon onto the wheel face and inner barrel.
- Spray tires and wheels with voodoo wheels and tire cleaner.
- Scrub tires with a tire brush to remove browning.
- Scrub inner barrel with a speed master wheel brush.
- Use a smaller brush for tighter areas and around the caliper.
- Use a soft-bristled brush for the wheel face to avoid scratching on sensitive surfaces.
- Rinse wheel and wheel well liner and move to the next wheel

Paint:

- Pour about 2 ounces of ph-balanced soap, onto a bucket with a grit guard. (2 wash mitts)
- Fill one bucket 30%-40% full with soapy water and another bucket 50% full with clean water.
- Spray off bugs and heavy dirt buildup around the vehicle.
- Use diluted all-purpose cleaner/degreaser to remove remaining bugs and road grime on leading edges.
- Use a foam cannon & foam the entire vehicle.
- Rinse off foam to remove dirt buildup.
- Foam the car again.
- Clean the car with a wash mitt from top to bottom, using a detail brush for small areas.
- Use one wash mitt for the top half of the car and another for the bottom half
- Wash the hood, windshield, roof, front and rear bumpers in a specific order.
- After washing two panels, rinse the wash mitt in the water bucket and scrub against the grit guard.
- Repeat the rinse and scrub process after every two panels rinse the car again after washing with the foam cannon.
- Rinse on the shadow side first, then move to the sunny side.
- Pull the car into the garage or a completely shaded area with urgency.
- Use an air cannon or leaf blower to remove excess water.
- If in a hurry, apply technician's choice tec582 onto wet panels before wiping with a drying towel.
- If paint is dried with a leaf blower, apply a ceramic/sio-infused topper, such as obsessed garage drying aid. tec582, bead maker. or ammo reflex pro.
- Use two plush microfiber towels for the application.
- Ensure the paint is slick while applying the topper
