

National HIV Testing Day is June 27

National HIV Testing Day occurs annually to encourage testing, know your status, and if necessary seek care and treatment. An estimated 1.2 million people in the U.S. have HIV, but only one in seven people know they have it. Testing helps determine status and helps reduce the spread of the HIV virus.

For more information about testing, please give our comprehensive HIV Program a call at **(855) 783-2434**.
