Introduction

Premium rates summary

The average premium rate in 2026 will be \$1.23 per \$100 of insurable payroll, the lowest it has been in more than 50 years. It's a two cent decrease from the 2025 premium rate of \$1.25.

Our rate setting transition policy expired in 2024 and businesses eligible for a premium rate reduction will now see decreases up to a maximum of three risk bands (approximately 15 per cent) towards their projected premium rate. Businesses with projected premium rate increase due to their individual and/or class risk and experience will move up a maximum of three risk bands (approximately 15 per cent) toward their projected premium rate. Non-profit organizations will move up to one risk band toward their projected rate.

Our funding position continues to be strong and close to the mid-point of our target funding range of 110 to 120 per cent due to our strong investment and operational results. Claim experience continued improving, which is reflected in the reduced average premium rate.

Establishing premium rates

We fund our workplace safety and insurance system for Schedule 1 businesses through investment earnings and premium rates applied to Schedule 1 businesses' insurable earnings. Schedule 1 businesses aren't all charged the same rate. Each business is assigned to a class/subclass aligned with the North American Industry Classification System (NAICS) based on the type of work they do. Businesses that have more than one business activity will be classified according to their predominant business activity – the business activity with the highest amount of insurable earnings.

Each class/subclass has a different premium rate, reflecting the average risk of the business activities insured in that class/subclass. More details on classification are available in our [Employer Classification Manual](#).

The average 2026 premium rate reflects a lower New Claims Cost (NCC) than the average 2025 premium rate, mostly because of improved claims experience. The administration component increased, meaning the costs to administer the system are growing at a slightly higher pace than insurable earnings. The increased administration component includes both legislated obligations and the WSIB's own administration costs.

We stopped charging businesses for transition funding in 2024 but not all businesses are paying their projected rate due to risk band limitations. Consequently, the 2026 premium rate includes a provision for revenue imbalance like the one introduced for the 2025 premium rate. This provision allows us to collect the required NCC and administration costs after applying the risk band movement limitations at the business level.

The rate stabilization margin for 2026 is the same as 2025 in order to support premium stability for future years taking into account ongoing economic volatility, the potential of legislated benefits and operational uncertainties. This margin is distributed to all classes based on NCC dollars.

Determining 2026 rates

We calculate premium rates annually to reflect businesses' ongoing experience and our latest financial requirements and targets. Under our rate setting model, each of the 35 classes/subclasses has a series of risk bands and each risk band has an associated premium rate, either above or below the 2026 class rate.

The 2026 class rate represents the premium rate a business would pay based on the collective risk profile for all the businesses in the class and the class's shared responsibility to maintain the insurance fund. If the 2026 class rate changes because of that class's overall claims experience, it will affect the other risk band rates within that class.

Each business is assigned to a projected risk band that best represents their risk compared to other businesses in their class. The difference between successive risk band rates is approximately five per cent.

Projected rates are determined based on our rate setting model introduced in 2020, which reflects individual claims experience and uses a two-step approach to set and adjust premium rates for businesses:

Step one: Setting the class rate for each industry class/subclass based on their risk and share of responsibility to maintain the insurance fund.

Step two: Setting the projected rate for each business based on their individual claims history compared to the rest of the businesses in the class/subclass. This means a business's projected rate will reflect their individual claims experience and risk.

To help businesses prepare for any future projected rate increases or decreases, rate movement is subject to risk band movement limitations. Businesses can participate in our health and safety programs to improve their workplace health and safety and their claims experience.

Businesses in the same class that fall under the same projected risk band have similar risk profiles and will have the same projected rate.

We used the following process to determine 2026 rates:

1. Determine overall Schedule 1 average rate: \$1.23 for 2026 premium year.
2. Determine a fair cost (i.e., claims-based cost) for each NAICS class/subclass that allows us to recover the required premium for all Schedule 1 businesses.
3. Determine the 2026 class rate for each class based on insurable earnings distribution by risk band. The 2026 class rates and their corresponding risk band premium rates are included in the [2026 class rates for risk banding](#) and [table of risk band rates](#) sections.
4. Determine businesses' projected risk band and projected rate based on their experience relative to the class. The projected rate represents the rate the business would pay if there were no limits on risk band movement. This rate reflects the business's individual claims cost experience relative to the class, as far as the experience is predictable (or credible).
5. Determine the prior year band for each business by placing the prior year rate in the 2026 risk band structure. We determine the prior year risk band and its corresponding prior year rate using the 2026 table of risk band rates. In 2026, this will be the 2025 actual premium rate charged to businesses, excluding the mine rescue modifier.
6. Compare the projected risk band with the prior year risk band and apply risk band movement limitation rules. Most businesses can move a maximum of three risk bands up or down to arrive at their actual risk band and the corresponding actual rate. The actual rate is the rate a business will pay after applying the risk band movement limits (defined by our [Employer level premium rate setting policy](#)) to the prior year rate towards the projected premium rate.

The WSIB's Board of Directors approves the average Schedule 1 premium rate, class rates and rules for determining the actual premium rates. Premium rates are expressed as a dollar amount per \$100 of insurable earnings.

Premium components

Premium rates include an amount for:

1. NCC – this covers the projected total future cost of injuries or illnesses expected in the upcoming year, including any additional margins we may require.
2. Provision for revenue imbalance – this is to make sure the actual premium after applying the risk band movement limitations results in the required revenue to cover 2026 NCC and administration expenses.
3. Rate stabilization margin – this is to address the priority of rate stability per our [Funding and pricing policy](#) given the possible changes in costs or other assumptions in 2026.
4. Administration expenses – the estimated cost required to administer the workplace compensation system in Ontario and fulfill our legislative obligations in 2026.

The premium components reflect the total premium requirement for all Schedule 1 businesses. Each class/subclass's premium rate includes a NCC class component, which contains the provision for revenue imbalance and rate stabilization margin, and administration expense amount based on claims experience and insurable earnings data from the most recent six-year experience window projected to the rate setting year. For 2026 premium rates, the experience window is 2019 through 2024. The class/subclass premium rate components section includes more details.

The maximum insurable earnings ceiling for 2026 is \$121,700, compared to \$117,000 in 2025.

Our role

The WSIB is a statutory corporation created by an Act of the Ontario Legislature in 1914. The WSIB is responsible for administering the *Workplace Safety and Insurance Act*. The WSIB receives no government funding. We're funded solely through premiums paid by businesses we insure. Revenue is also raised through returns on invested assets.

We help support people and businesses affected by workplace injuries and illnesses – providing a comprehensive bundle of insurance benefits as set out in the Act and helping people recover and return to work by:

- providing benefits to people who experience work-related injuries or illnesses and the dependents of people who have died because of a work-related injury or illness
- helping people who experience work-related injuries or illnesses recover and return to work

Businesses covered by the *Workplace Safety and Insurance Act* are divided into two groups, referred to as Schedule 1 and Schedule 2. This manual pertains to Schedule 1 businesses only.

Classification scheme

We assign individual businesses to a class/subclass aligned with the North American Industry Classification System (NAICS) and incorporate additional WSIB-specific classification codes as outlined in our [Classification structure policy](#). Each class and subclass is composed of all six-digit classification codes belonging to the two-digit NAICS sector, three-digit NAICS sub-sector, or four-digit NAICS industry group listed in the [industry classification scheme](#).

Businesses are classified in one or more six-digit classification codes based on the description of business activities in our [Employer Classification Manual](#). The Employer Classification Manual provides detailed descriptions of all classification codes used to classify business activities and the coverage status for each classification code.

Most businesses perform a single business activity and are classified in a single six-digit classification code. Some businesses with more than one business activity may be classified in multiple six-digit classification codes.

We generally assign businesses with multiple six-digit classification codes a single premium rate based on the predominant class or subclass. However, we might assign multiple premium rates to some businesses with multiple six-digit classification codes, as outlined in our [Single and multiple premium rates policy](#).

We classify certain businesses – including [non-exempt partners and executive officers in construction](#) and [Temporary Employment Agencies](#) (TEAs) – using an alternative approach due to their unique circumstances. The NAICS system doesn't recognize this alternate treatment, so we established additional six-digit classification codes for these businesses. These cases are relevant only for the WSIB's industry classification – not for broader economic analysis.

B: Mining, quarrying and oil and gas extraction

Classification code	Description
001020	Supply of labour to Class B
212220	Gold and silver ore mining
212233	Copper-zinc ore mining
212232	Nickel-copper ore mining
212231	Lead-zinc ore mining
212299	All other metal ore mining
212210	Iron ore mining
212398	All other non-metallic mineral mining and quarrying
212291	Uranium ore mining
212394	Asbestos mining
212397	Peat extraction
212395	Gypsum mining
212396	Potash mining
212393	Salt mining
212326	Shale, clay and refractory mineral mining and quarrying
212114	Bituminous coal mining
212115	Subbituminous coal mining
212116	Lignite coal mining
211110	Oil and gas extraction (except oil sands)
211141	In-situ oil sands extraction
211142	Mined oil sands extraction
212314	Granite mining and quarrying
212315	Limestone mining and quarrying
212316	Marble mining and quarrying
212317	Sandstone mining and quarrying
212323	Sand and gravel mining and quarrying
213111	Oil and gas contract drilling
213118	Services to oil and gas extraction
213117	Contract drilling (except oil and gas)
213119	Other support activities for mining
212392	Diamond mining

Table of risk band rates

We began using risk bands as part of premium rate setting in 2020. This process relies on pre-defined tables of risk band rates. There's one table for each class/subclass adapted from NAICS that includes the following:

- the risk band numbers
- the associated range of risk profile index values
- the class rate (risk band 60 in the risk band tables)
- the risk band rate factor
- the risk band premium rate, which equals the 2026 class rate (risk band 60 in the risk band tables) multiplied by the risk band rate factor

To determine the projected rate, the maximum risk band for any class/subclass is 83 (i.e., 23 risk bands above the class rate's risk band). For 2026, the minimum premium rate is \$0.07 and the lowest risk band for any class/subclass can't have a rate below \$0.07. This minimum premium rate applies to all classes, but the minimum risk band differs by class.

We also use the risk band tables to determine the prior year risk band (or starting point risk band) with no limitations. The following general rules can be used to expand the table:

- For risk bands below the class rate, we determine the rate factors by applying a five per cent discount to the risk band factor of the risk band above. This means the risk band factor is 95 per cent of the risk band factor for the next band up.
- For each risk band above the class rate, we determine the rate factors by applying a five per cent increase to the risk band factor of the risk band below. This means the risk band factor will be 105 per cent of the risk band factor for the next band down.
- The risk band rate equals the class rate multiplied by the risk band rate factor.

Definition of 2026 premium rate components

New Claims Cost (NCC)

The projected total future cost of illnesses/injuries expected to arise during 2026.

Provision for revenue imbalance

This component is designed to address the revenue imbalance due to “rate-setting constraints,” as premium rates are subject to risk band movement limitations according to our pricing policies. This component doesn’t create a “gap” in the required revenue and it won’t be collected. It’s a mechanism to prevent a gap in the required revenue and enables us to collect the necessary premium that covers our expected NCC and administration expenses in 2026.

Rate stabilization margin

Our [Funding and pricing policy](#) includes premium rate stability as a priority. This priority can be achieved by including a margin in the premium rates. A margin of four cents is included in 2026, similar to 2025. We didn’t change the margin because of the volatility of the current economic environment, potential legislated benefits, potential operational challenges and to avoid decreasing the premium rate too fast. The 2026 NCC decreased as a result of improved claims cost experience. However, a rate decision without a rate stabilization margin could result in a future premium rate increase if NCC increase in the future for any reason (i.e., experience deterioration, recession, expected legislated benefit changes, etc.).

Administration expenses

The estimated expenses for us to administer the *Workplace Safety and Insurance Act* in 2026.

Legislative obligations

The expenses we must fund under the *Occupational Health and Safety Act*, the Workplace Safety and Insurance Appeals Tribunal, Office of the Employer Advisor, Office of the Worker Advisor, Health and Safety Associations and research in 2026.

Total administrative expenses

The total administrative and legislative obligations expenses. This is the cost required to administer the workplace safety and insurance system in Ontario and fulfill our legislative obligations.

Premium rate

Total cost per \$100 of insurable earnings required to fund new claims, the provision for revenue imbalance, the rate stabilization margin and administration expenses.

Premium rate setting allocation rules for class/subclass

New Claims Cost (NCC)

Each class/subclass may see changes in its NCC from year to year. To minimize this volatility, the NCC is determined first for six “super classes” – groups of classes/subclasses in similar broad economic sectors – and is then distributed over the classes/subclasses in the super class group using their Claims Cost Ratios (CCR).

The CCR for each class/subclass is compared to the CCR of its corresponding super class. This ratio indicates an average claim’s relative costliness for a class/subclass compared to its super class’s average costs. The CCR is the ratio of six years of costs to six years of insurable earnings. We use an average of the CCRs for the last three calendar years to enhance stability.

In 2026, the super classes are defined as follows:

Non-exempt partners and executive officers in construction

Non-exempt partners and executive officers in construction previously classified under rate group 755 have received a separate premium rate since 2020. This premium rate reflects the low risk of their work compared to the rest of the construction industry.

We assign the same premium rate to all non-exempt partners and executive officers in construction each year, although they're classified under one of the six construction subclasses depending on their construction business's operations. The 2026 rate for this group is \$0.20 per 100 of insurable earnings.

For the 2026 premium rate, we consider the collective experience of all non-exempt partners and executive officers in construction as if they were a single business in the construction subclass with the highest percentage of insurable earnings and apply our rate-setting formula to it. You can review our [Employer level premium rate setting](#) policy for more information.

In 2026, the construction subclass with the highest percentage of insurable earnings from non-exempt partners and executive officers based on insurable earnings from 2022, 2023 and 2024 is G5, Specialty Trades Construction.

However, we continue to consider Class G4 the predominant class to ensure stability. We'll keep monitoring the trend before we update the predominant class since G4 and G5 have very close percentages of insurable earnings. The following chart shows the distribution of insurable earnings among construction subclasses from 2022 – 2024.

Predominant class	2022 insurable earnings (millions of \$)	2023 insurable earnings (millions of \$)	2024 insurable earnings (millions of \$)	2022-2024 insurable earnings (millions of \$)	Percentage

Steps for calculating the 2026 non-exempt partners and executive officers rate

Actual rate before modifiers (your rate)

The 2026 actual rate for non-exempt partners and executive officers in construction is \$0.20, up three cents from 2025. The following projected rate determination is shown for illustration purposes.

We applied risk band movement limitation rules just like we do for any other business. The calculation of the projected premium rate shows the future direction in this premium rate if the group and class experience from year-to-year doesn't change. We frequently review the claims in the non-exempt partners and executive officers in construction group to confirm their classification.

Predictability 90 per cent (for all non-exempt partners and executive officers in construction rated as a single business)

Six-year total insurable earnings	\$3,839,054,421.32
100% insurable earnings predictability standard (12,000 x \$121,700)	\$1,460,400,000.00
Actuarial predictability of insurable earnings (capped at 100%)	100.000%
Six-year claim count	60
100% allowed claim count predictability standard	1,200
Actuarial predictability of total number of allowed claims (capped at 100%)	22.361%
Predictability value = 75% based on insurable earnings + 25% based on total number of allowed claims	80.590%
Actuarial predictability (arrived by locating the predictability value in the predictability scale)	90%
