

DayDreamer SECOND BRAIN

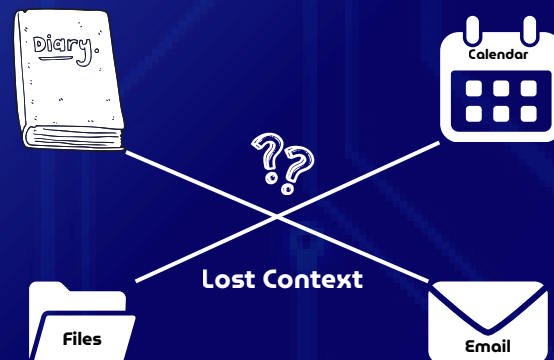

A Personal Intelligence Platform

Transform unstructured thoughts into structured, retrievable memory with AI-powered insights

The Problem

Personal knowledge is everywhere. Context is nowhere.

Managing personal knowledge across diaries, calendars, emails, and files is fragmented and inefficient. Traditional note-taking tools lack intelligence - they store but don't understand. Users struggle to retrieve past insights, identify patterns in their lives, and reflect meaningfully on their experiences.

THE PROMISE

One memory layer. Evidence you can trust.

Solutions / Key Features

Hierarchical Reflection

AI aggregates daily diary entries into weekly and monthly insights.

Grounded Memory Retrieval

Answers stay anchored to diary, calendar, contacts, drive, and email data.

Explainable AI

Citation markers and confidence scores make every answer inspectable.

Semantic Search

Vector-based search uses AI embeddings with persistent query history.

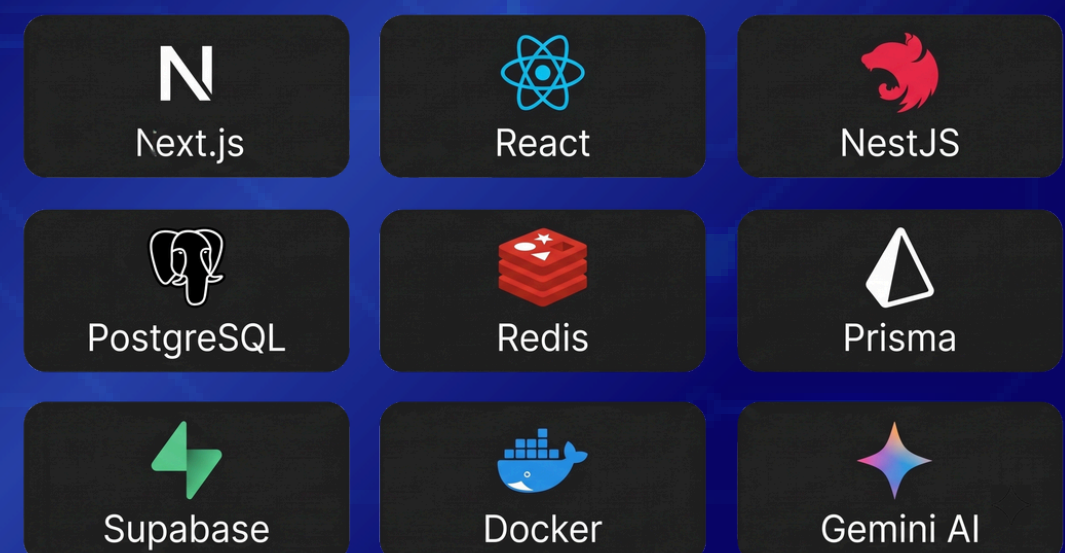

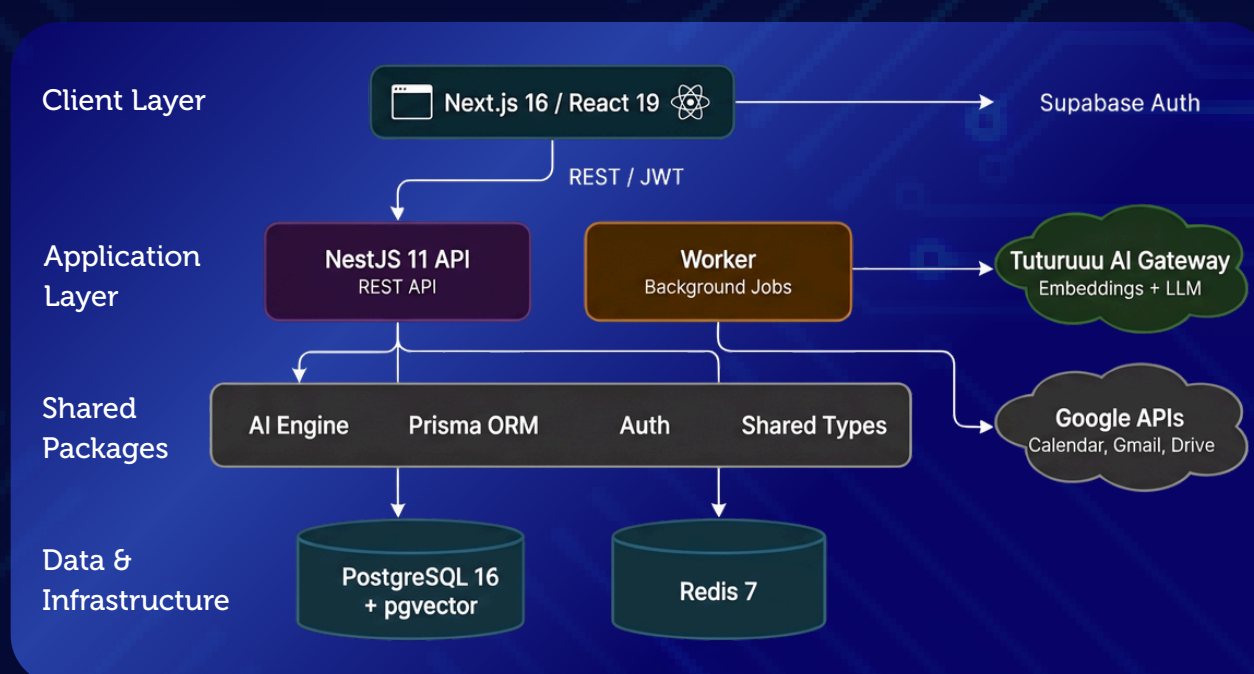

Google Workspace Integration

Calendar, Contacts, Drive, and Gmail become one unified memory.

Entity Extraction

People, projects, goals, and habits are detected automatically.

System Architecture and Technology Stack

Product Outcomes

Second Brain successfully transforms fragmented personal data into an intelligent, searchable knowledge base. The platform delivers grounded, citation-backed AI answers with full observability, achieving reliable memory retrieval across diary entries, calendar events, emails, and file attachments.
