

Problem Statement

Teachers spend **significant time** creating lessons, preparing assessments and grading student work.

At the same time, **students** often **lack personalised guidance** and may **rely on general-purpose AI tools** that provide answers without encouraging understanding.

Our Solution

EduFlow is an intelligent ecosystem designed to streamline educational workflows. It empowers teachers by automating routine content creation and grading tasks, while supporting students through a Socratic AI tutor that encourages mastery learning.

For Students

01 Learn with course-aware guidance

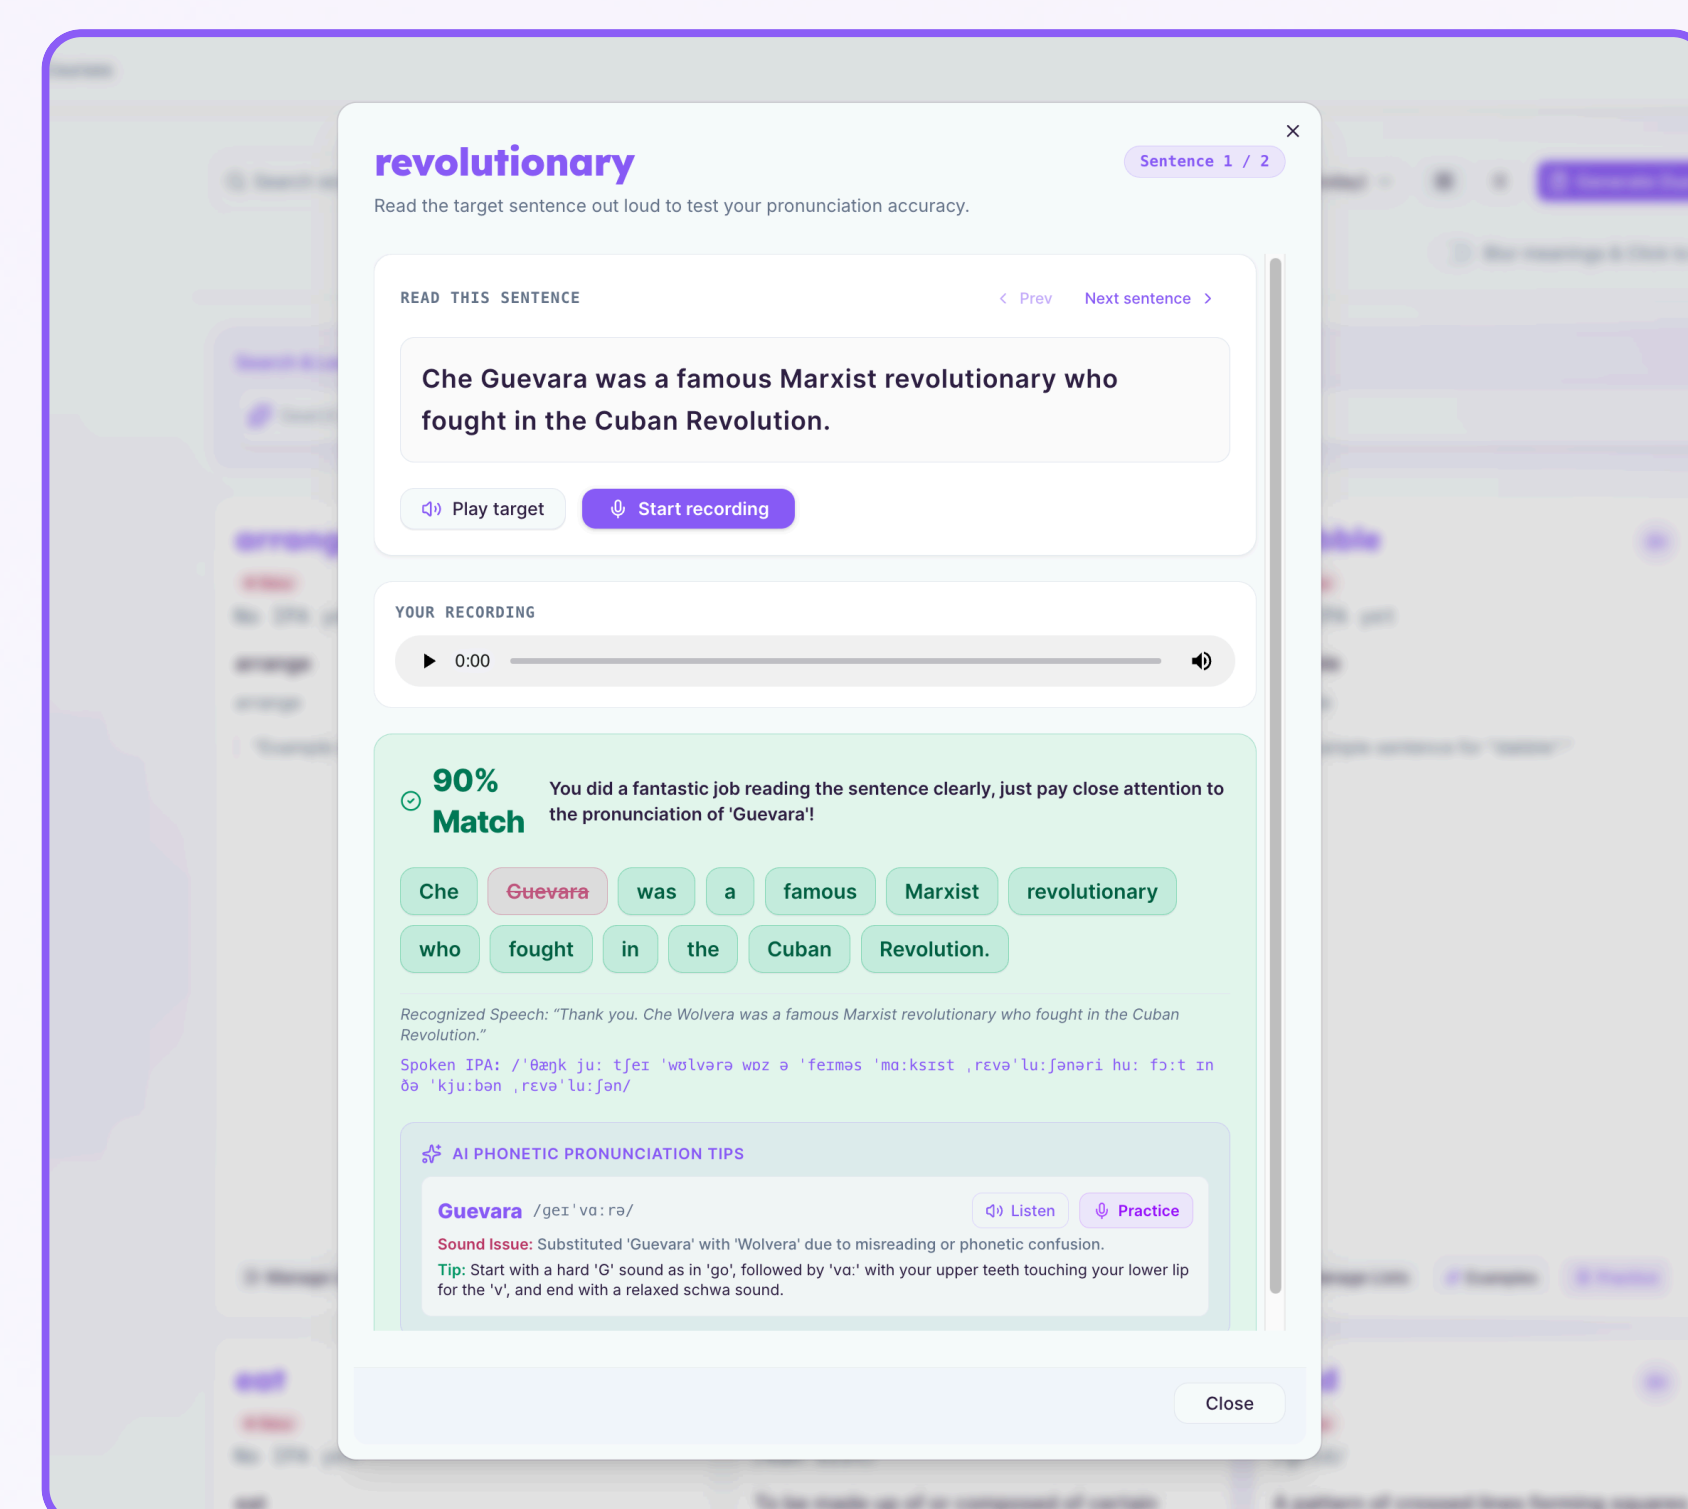

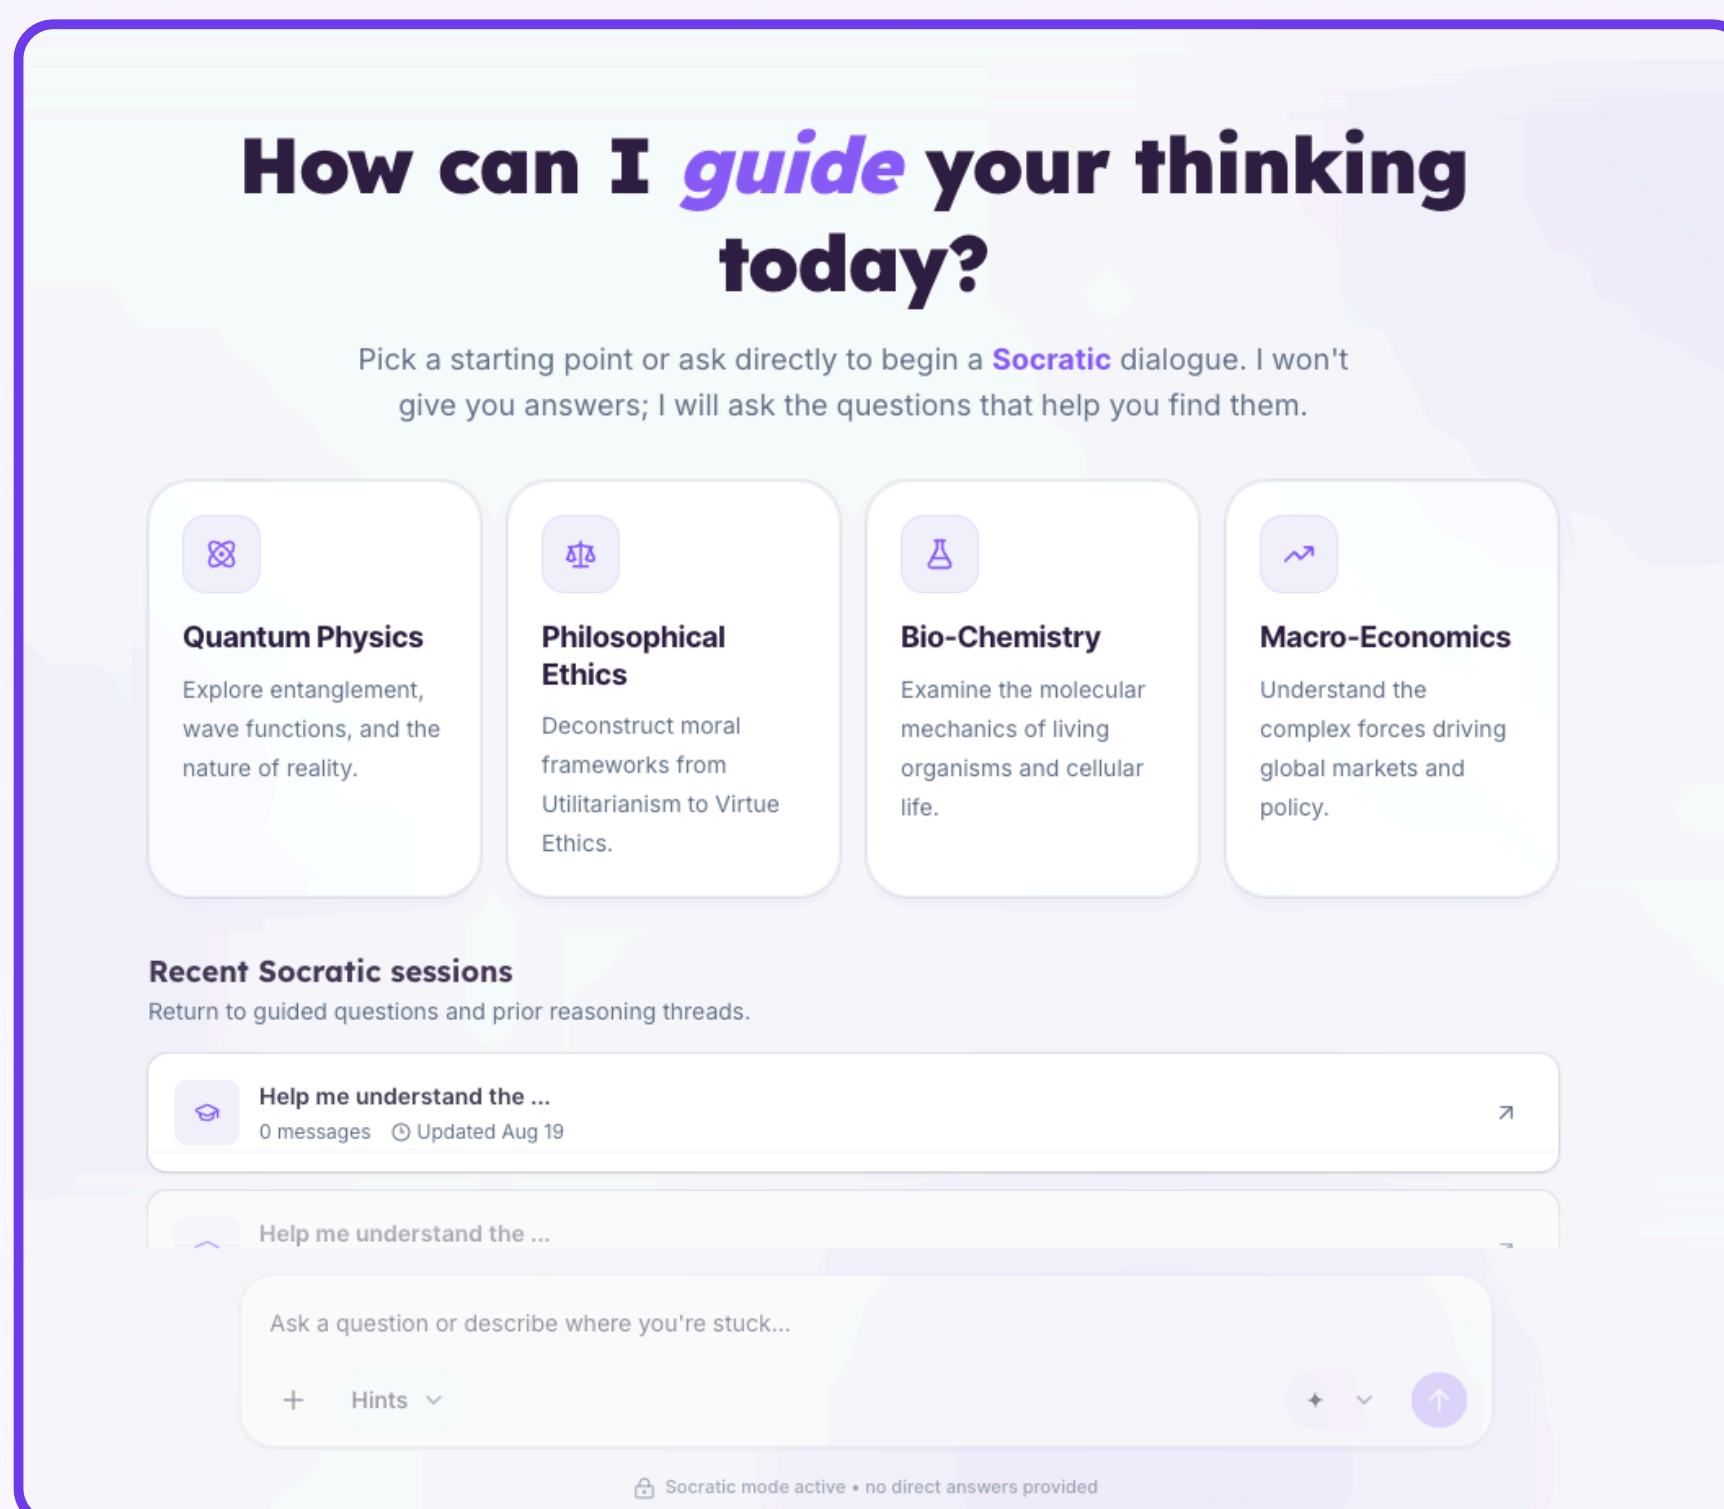

Receive personalised explanations and study support grounded in approved course materials.

02 Practise and build understanding

Use quizzes, hints, and immediate feedback to learn actively without simply being given the answer.

03 Study in the way that suits you

Translate or simplify difficult content and continue previous learning sessions whenever needed.

1 Join Course

2 Explore Materials

3 Ask the AI Tutor

4 Practise with quizzes

5 Receive Feedback

For Educators

01 Create teaching content efficiently

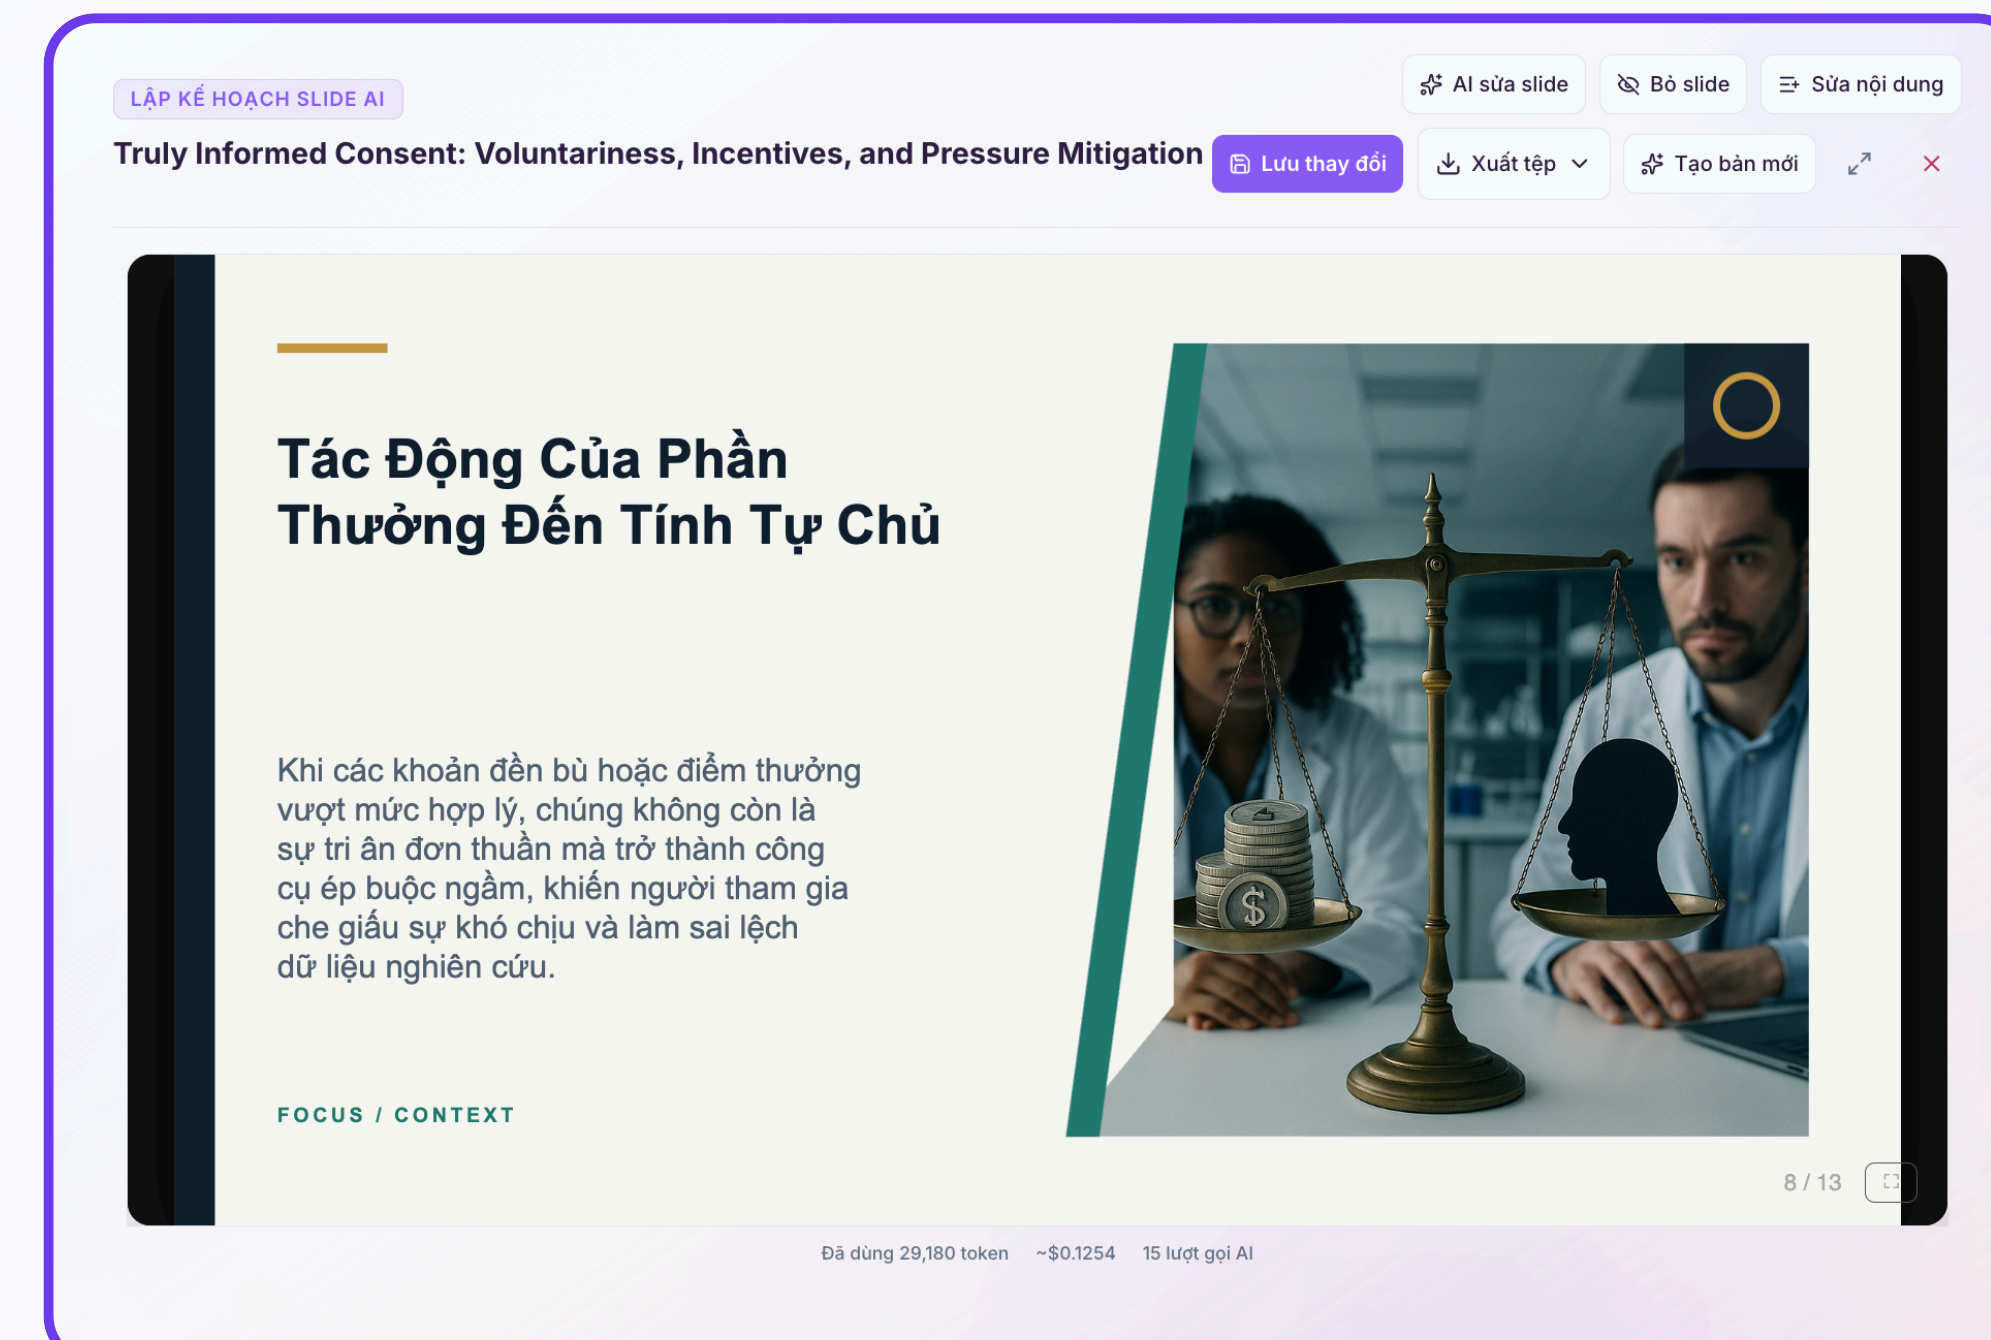

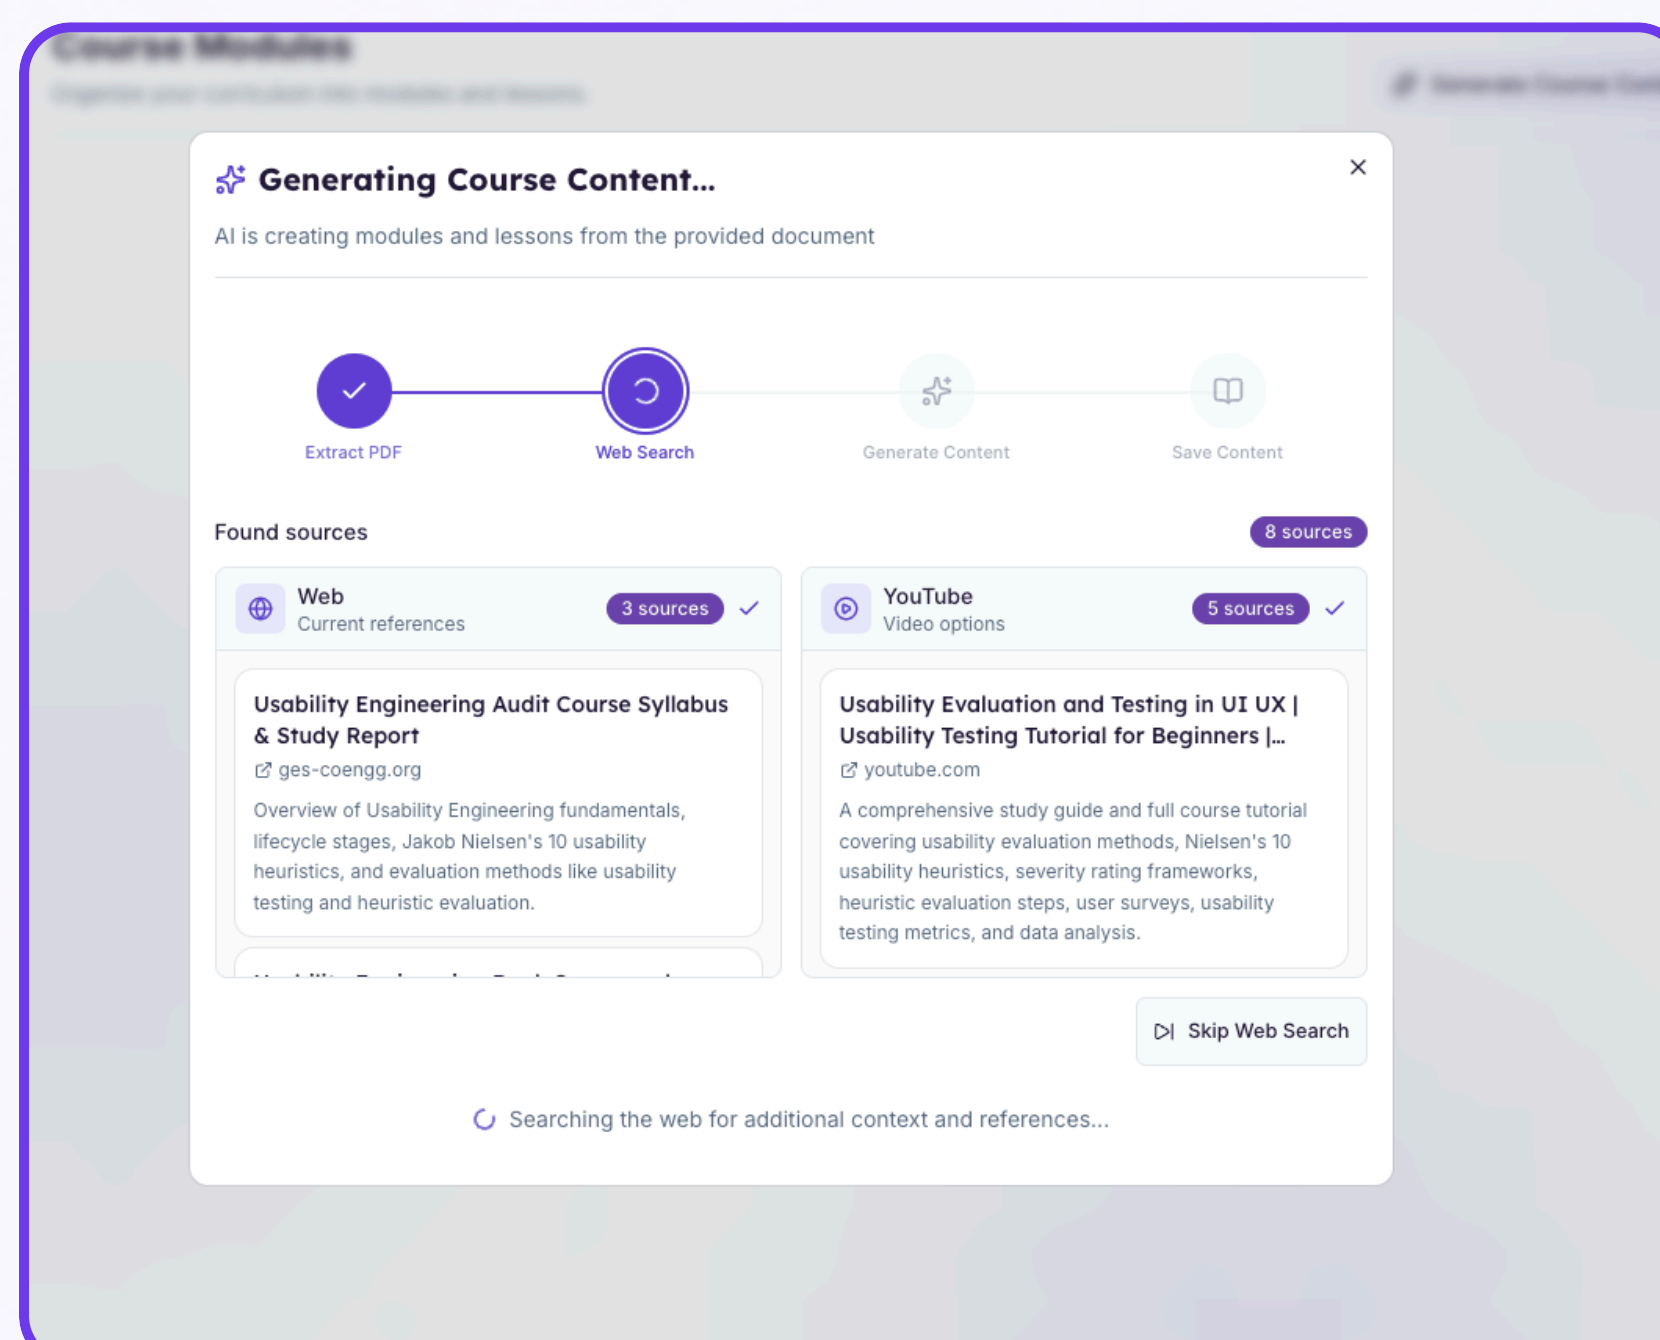

Generate editable lessons, presentations, quizzes, and assessments from uploaded course materials.

02 Review and remain in control

Refine AI-generated content and feedback before publishing resources to students.

03 Organise courses and monitor progress

Manage learning resources in structured courses and follow student participation and progress.

1 Upload Materials

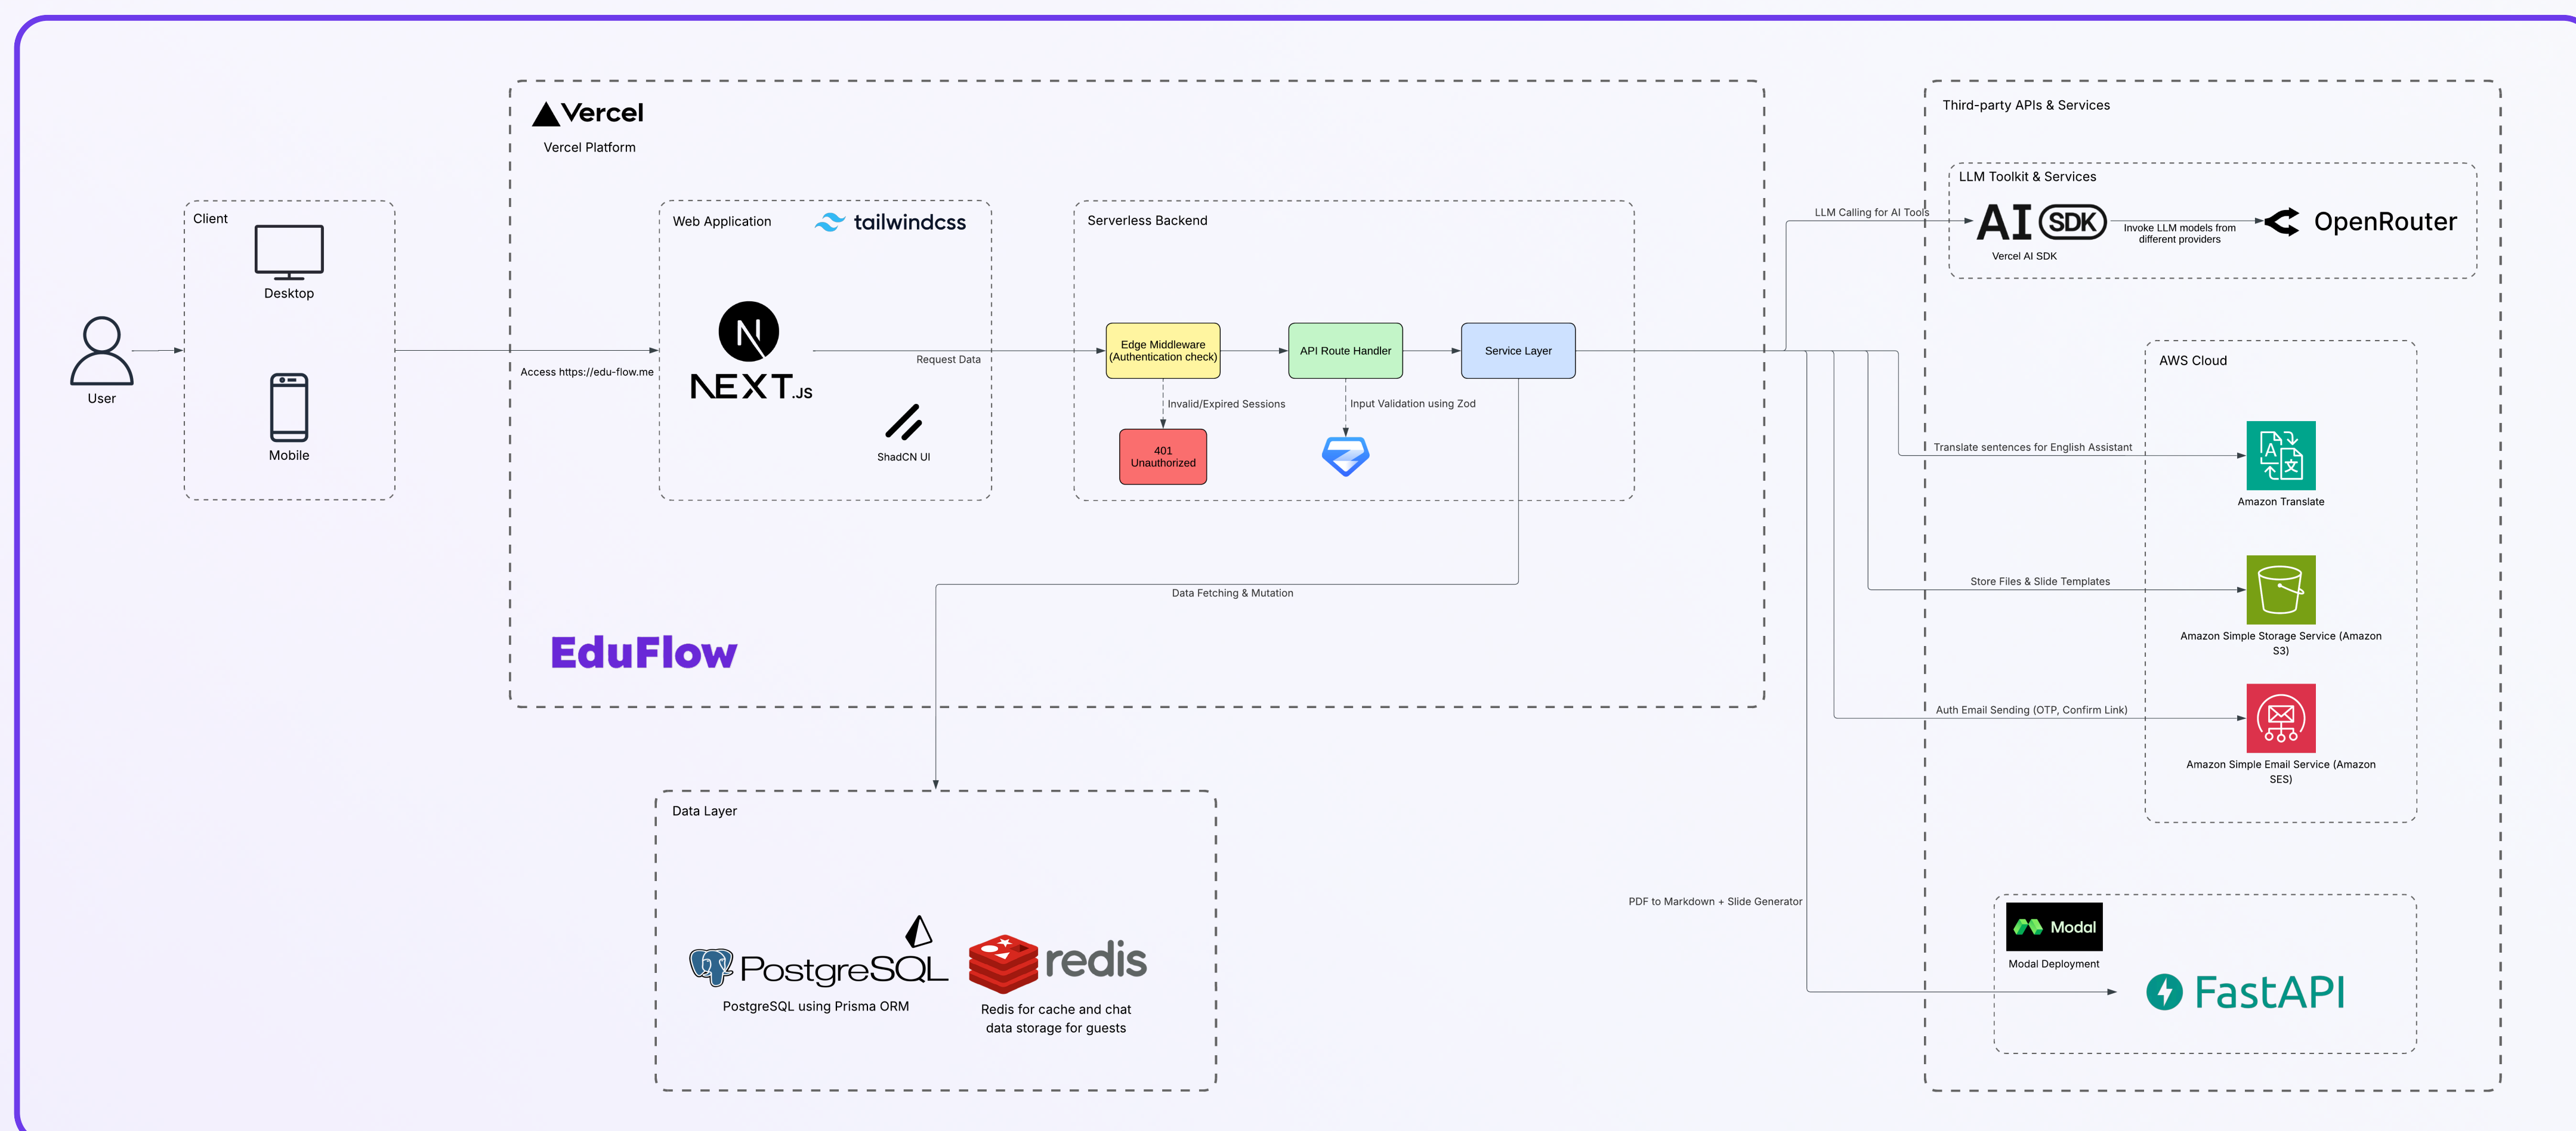

2 Generate Content

3 Educator Reviews

4 Publish to Course

5 Students Learn & Practice
