

Factory Carbon Footprint Statement

We, INELCO, understand that as a responsible corporation, we have an obligation to reduce carbon footprint and seek more environmentally friendly ways of production.

Current Situation

Our current carbon emissions mainly come from the following aspects:

1. Production Process: Our production process requires a lot of energy, which is the main source of our carbon emissions.
2. Logistics: Our products need to be transported all over the country, which also leads to some carbon emissions.
3. Office Operations: Although this part of the carbon emissions is relatively small, we are still working hard to reduce the energy consumption of the office.

Future Plans

We have developed a plan to further reduce our carbon footprint:

1. Improve Energy Efficiency: We are researching new production technologies to improve energy efficiency and reduce carbon emissions.
2. Green Logistics: We are looking for more environmentally friendly logistics solutions, such as using electric vehicles for transportation.
3. Energy-saving Office: We will improve office facilities, such as high-efficiency air conditioning and heating systems.

Commitment

We promise to continue to work hard to achieve our goal of reducing our carbon footprint. We believe that only through continuous improvement and innovation can we achieve sustainable
