

ACULASER

Benefits of Body Contouring

Since this is a non-surgical procedure, the patient will not need to be put under any anesthesia. Body contouring with the VelaShape III by Syneron Candela procedure does not involve any form of an incision. During a regular appointment, the patient will lie down on a medical table and be able to relax while we run the VelaShape III by Syneron Candela device over specific areas of the body.

We will target specific areas on the body that are:

- Pockets of fat
- Decrease wrinkles in the skin
- Tighten the skin
- Smooth and flatten out surfaces

Targeting Specific Areas –

Unlike other fat-removal methods or exercise that target general areas of the body, this procedure allows us to target the specific areas where fat seems to persist. While the patient lies back, we will run the device over the specific areas to heat up and eliminate fat cells. Not hurting the patient, this heat can destroy the fat cells so the body will then naturally get rid of them.

Length of the Treatment –

The length of one treatment session will only be about an hour. In general, the length of time may vary per patient and the area of the body we are treating. While this amount of time can seem short, our team will ensure the patient receives the necessary care in the amount of time. Patients may need several appointments over the span of a few weeks to see the desired result and reach their goal.

Comfortable Non-Invasive Procedure –

This procedure is comfortable and non-invasive. While this device uses heat to target fat cells, it will only feel like a hot stone massage to the patient. In general, the patient will not need to move during the procedure either.

There is a minimal to almost no risk of damage to the skin. At AcuLaser Body LLC, our team will take the time to help the patient remain comfortable during the body contouring treatment.

Little to No Downtime –

Following the procedure, the patient will not need to worry about recovery or having to take it easy for two weeks. There is no need since this is a non-invasive procedure. VelaShape III by Syneron Candela delivers heat energy through the skin to the areas of fat beneath. It targets the cells without damaging the surface of the skin. If you are interested in this treatment and want to learn more, give us a call, and schedule an appointment at AcuLaser Body LLC today.
