

# Grower Gluten Free Sorghum Evaluation Questionnaire

A food allergy occurs when a person's immune system reacts to allergens that are harmless to other people. Some common allergens in the Sorghum supply chain include Wheat, Soybean, Barley, Oats, Rye, Ryegrass and Lupin. These allergens must be declared whenever they are present in food, however small the amounts present. Agricultural cross contact can occur from crops being grown in close proximity to each other, sharing the same fields due to crop rotation, and/or sharing the same equipment/facilities for harvesting, transport and storage.

**Company Name (Trade As):** \_\_\_\_\_

**Main Contact:** \_\_\_\_\_

**Contact #:** \_\_\_\_\_

**Address:** \_\_\_\_\_

Commodity		Season	
Variety		Field/Paddock (Source)	
Date of Harvest		Qty:	

## Gluten Questionnaire

Type of grains containing gluten	Grown on your land/farm?		Currently present in your facility (ex. Stored grain)	
	YES	NO	YES	NO
