

Grower Gluten Free Sorghum Evaluation Questionnaire

A food allergy occurs when a person's immune system reacts to allergens that are harmless to other people. Some common allergens in the Sorghum supply chain include Wheat, Soybean, Barley, Oats, Rye, Ryegrass and Lupin. These allergens must be declared whenever they are present in food, however small the amounts present. Agricultural cross contact can occur from crops being grown in close proximity to each other, sharing the same fields due to crop rotation, and/or sharing the same equipment/facilities for harvesting, transport and storage.

Company Name (Trade As): _____

Main Contact: _____

Contact #: _____

Address: _____

Commodity	SORGHUM	Season	
-----------	---------	--------	--

Paddock I.D.		Variety:		Qty:		Date of Harvest:
