

Canford School

GODSELL • ARNOLD PARTNERSHIP LTD

Consulting Civil and Structural Engineers

Project details

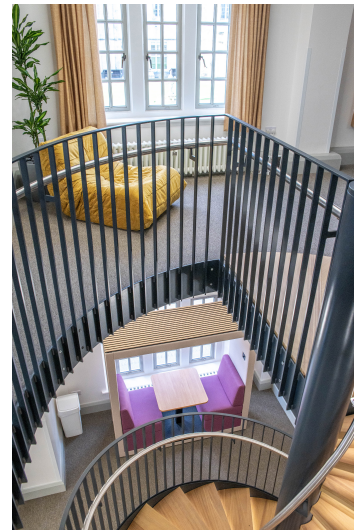

Since 2019 GAP Ltd. have been working with our valued client Canford School to deliver a sixth form hub and a new sixth form accommodation building. Working closely with the project architects Williams Lester we have provided structural and civil engineering design services across both projects.

The sixth form hub project involved the refurbishment of the 1920 Grade 2 listed Montacute House.

Significant structural interventions were carried out to create open plan interior spaces with the works completed in the summer of 2025.

The new four storey accommodation block is currently under construction adjacent to Montacute House and is due to be complete in spring 2026. Drawing on the historic architecture of the original school buildings and constructed in loadbearing masonry, incorporating complex brickwork and intricate fenestrations.

GAP Ltd. have worked closely with the architects utilising BIM modelling to provide the close co-ordination and sensitively considered structural detailing that the project has demanded.
