Legal Disclaimer

It is strongly advised to read this legal disclaimer with complete consideration before continuing on with the gm whitepaper.

gm is currently working with a top law firm to ensure compliance with U.S. law. Once this process is complete, an updated whitepaper will be released which will include the necessary modifications recommended by the legal team. If you have any questions or concerns, you are advised to seek counsel from legal, financial, taxation, or other competent law practitioners and authorities. All of the information provided here is not intended to be complete, and it should never be construed as a part of any contractual arrangements.

It is our firm conviction that the information provided in this white paper is accurate and that all products, services, technical architecture, token distribution, and timelines are accurate and up to date. Furthermore, all of these materials may change without notice, and they can never be considered a signatory agreement of advice.

Not Financial Advice

This white paper does not obligate anybody to sign a contract or make a legally enforceable commitment to contribute. This white paper is provided for informational purposes only and should not be construed as investment advice or an offer or solicitation to buy or sell the \$gm token, nor shall it be construed as a part of any effect that can be used in the formation of a contract or an investment decision.

Compliance with Tax Obligations

Community members in gm are entirely responsible for determining tax implications of their transactions. gm and its team members are not responsible for determining which taxes apply to transactions.

Limitation of Liability

gm shall not be held liable for any loss or harm resulting from the use of this white paper material, including written material, links to third-party sites, data, quotations, charts, and buy/sell signals. Please be fully informed about the dangers and expenses of trading assets on the financial markets (digital or otherwise). Digital assets, including \$gm, are speculative and highly volatile, and can become illiquid at any time. Investors could lose the entire value of their investment and should evaluate the risks and benefits of an investment in \$gm.

Community Participation Risks

Trading cryptocurrencies has a high level of risk and are not suited for all community members. You should carefully evaluate your participation goals, level of expertise, and risk appetite before opting to trade cryptocurrencies, tokens, or any other digital asset.

Introduction

Good morning (gm)!

\$gm is an ERC20 token built on the Ethereum blockchain. It is the first cultural movement cryptocurrency and represents the collective goodwill of our ever-growing community. gm harnesses the positive energy of the “good morning” greeting into a token.

\$gm launched on uniswap on November 8th, 2021 and has become the fastest growing cryptocurrency of all-time, achieving listings on 12 exchanges in its first week. This is an unprecedented accomplishment for an ERC20 token.

The team behind gm was inspired to create the token to unite the decentralized financial movement, and build a sense of family and mutual value within our community. gm is not about one singular person, but the community and its members as a whole.

Humans are social beings and not meant to live alone. We thrive on positive relationships with others, and gm is built on this premise. The aim of gm is to spread goodwill and best wishes to others, regardless of their social status or state of life. gm recalls the spirit in which you greet that surfer you meet on the beach, a person living with homelessness, or a puppy in the park. gm is about sharing and fostering good vibes and positive energy.

The gm token has established itself as a formidable force in the decentralized financial world, while spawning dozens of copycats. However, gm remains standing out amongst the crowd. The gm community is the driving force and the lifeblood of the movement.

gm means community, and community means family.

Vision

gm is a cultural movement that will aim to change countless lives supported by an active and engaged community. The gm community will work together to further the inspired social phenomenon of sharing the well wishes of a good morning, or for short, a gm.

Individuals who join the gm community are participating in a cultural revolution and share a common vision to spread goodness and to execute upon the chosen objectives.

This may include but is not limited to creative initiatives and investments in any venture, deemed necessary or charitable contributions, aligned with the gm community values.

Mission Statement

To create a self-sustaining gm ecosystem and community that will be run by a Decentralized Autonomous Organization (DAO). We also believe in being charitable and spreading the message of gm across the globe. gm will provide the worldwide community opportunities to better their own lives and feel a sense of family in this amazing community.

- Provide every holder with a simple and effective way to gain exposure to digital assets.
- Operate as a community-focused and community-driven fully decentralized digital asset
- Bring positive change to the world through community-driven charitable contributions.

Why We Launched on ETH

First and foremost is security. Ethereum is a proven and trusted blockchain with a massive worldwide user base and an easy ecosystem in which to get involved. Launching on Ethereum provides gm with the most exposure possible prior to hitting initial exchange listings.

At gm we want our community to be as inclusive as possible - this is why bridging to other blockchains is a priority, so that users in other ecosystems can participate in the gm movement.

- One of the most secure blockchains with a proven track record.
- Highest user base of any ecosystem in the space.
- Proven chain that has withstood the test of time.

gm Bridge

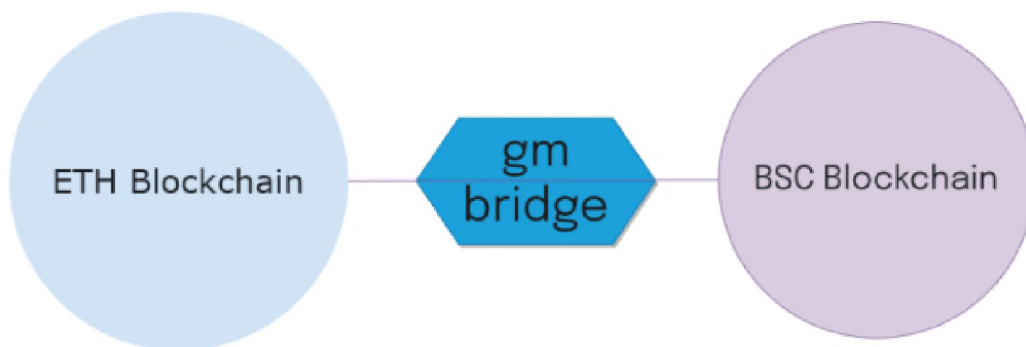

Cross-chain solutions are increasingly catching the attention of speculators within the decentralized finance ecosystem. As products and platforms grow in popularity, interoperability between separate chains is becoming increasingly important. The space is evolving rapidly, and the lack of cross-chain interoperability has been one of the biggest hurdles to overcome.

Bridging to other blockchains will open up entire new user bases in other blockchain ecosystems. Some users may feel that the current ETH fees are too high and are waiting for gm to bridge to Binance Smart Chain, or another network. The initial plan is to bridge to Binance Smart Chain, and continue looking at other networks thereafter. In order to successfully bridge, a percentage of liquidity will need to be removed from uniswap in order to supply enough tokens for bridge liquidity. At the time of this writing this, we are in talks with the team that built Floki's bridge, which is another cryptocurrency with a current market cap in the billions.

Benefits of Bridging:

- Some other networks may have cheaper gas fees than Ethereum.
- Opens up an entire new user base.
- Gives gm a cross-platform utility, which makes it more interoperable.
- Creates more liquidity. Liquidity will build up on other Dex's located on other chains.

How does a Blockchain bridge function?

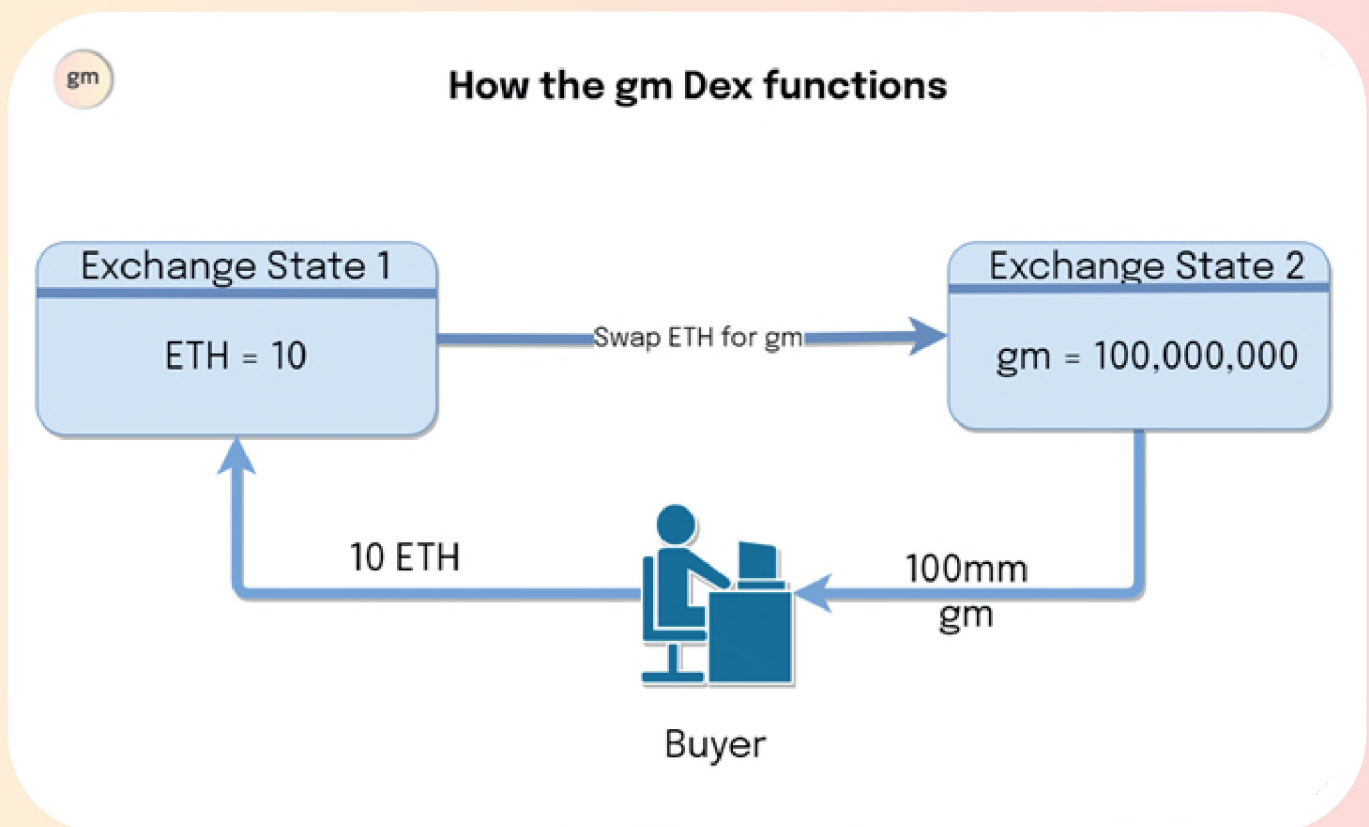

gm DEX

A major roadmap item that will further increase utility and be another revenue driver for gm is a DEX. The decision to launch a DEX will depend heavily on the legal guidance that the gm team receives, and should not be taken as a for certain addition in the future.

If approved, a DEX will provide the community another trusted solution to swap ERC20 tokens, as well as allowing gm to charge listing fees and only allow safe and approved projects to be listed. Listing fees will provide gm with revenue that will further help drive innovation, marketing and charitable contributions.

The DEX will guarantee speed of token processing and comparable transaction rates (not including gas fees) so that the community can easily connect, and utilize these features. It will allow for easy, fast, and secure exchange in a truly decentralized way. The Exchange is non-custodial, meaning a user remains in control of their private keys when transacting on a DEX platform.

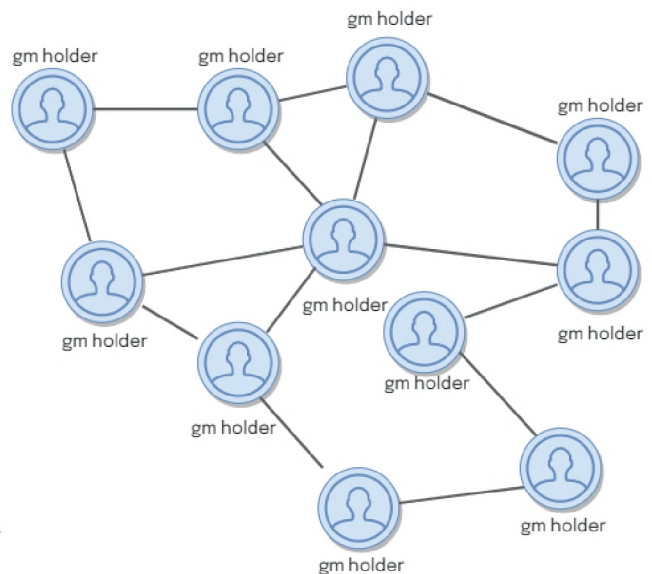

gm DAO

Our long-term goal is to create a DAO to shift power to the gm community. This ensures that contributors, admins, mods, volunteers, and developers work together to further the project's vision. The DAO structure will include the following:

1. The ability for holders of the gm ecosystem governance token to make "proposals". Proposals are then voted on by the community, and are implemented after approval.
2. When a proposal is voted on and successfully passed by the community, the status of the said proposal will change to "executed". If a proposal is unsuccessfully passed, its status will change to "defeated".
3. The DAO will also vote on decisions regarding the direction of charitable donations.

This regulates the process of decision-making among the actors involved in the gm ecosystem. Our DAO aims to disrupt traditional governance structures of all kinds, and challenge the way we currently think about governance.

Tokenomics

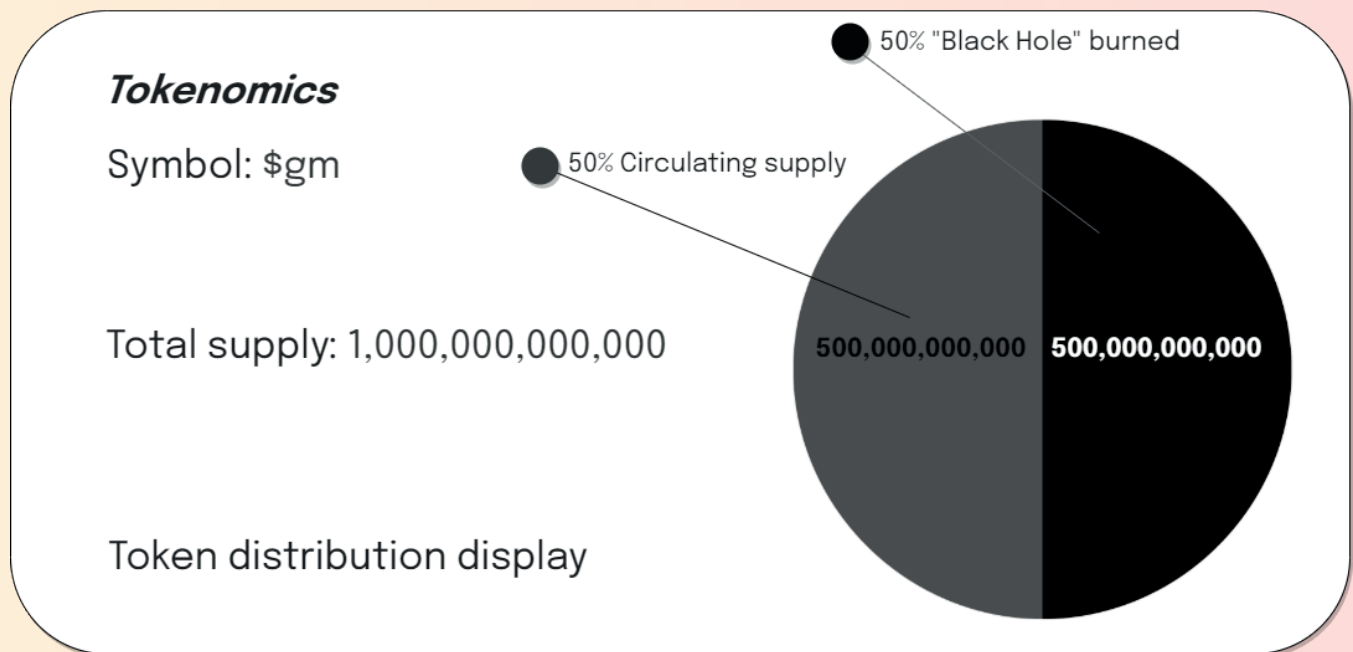

- ERC20.
- Ethereum Blockchain.
- 1 Trillion total supply.
- 50% burned at launch.
- 1% burn tax.

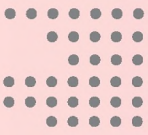

gm initially had a 10% tax structure which was broken down as follows:

- 2% reflections (since 50% was burned, half of these reflections were being sent to the black hole).
- 4% Uniswap auto liquidity locking.
- 4% to marketing wallet.

Subsequent to launch, taxes were reduced to 1% and as strictly a burn tax. This change was necessary as a step towards US compliance as the dividend needed to be removed, which accounted for 2% of the total 10% tax. The marketing and uniswap liquidity was turned off because the gm team had raised enough funds to support the project, and did not want the tax to stunt the growth of the token, as the liquidations were causing price drops.

By having the tax at 1%, we remain a deflationary token, as well as preventing liquidations from affecting the price. Moving forward our legal team will go over these tokenomics, which means that they are subject to a possible change if any legal issues arise.

We believe that deflationary economics are core to what makes so many cryptocurrencies appealing. When you think of supply consistently decreasing, it creates a sense of power. Token burns mean that your own personal holdings are indirectly growing, as the number of tokens that you hold becomes a higher percentage of the circulating supply.

At the time of this writing gm has burned an additional 2.8% of supply, which is added onto the original 50% burn.

A breakdown of how the burn mechanism works:

After the 1st week, the tax was reduced to 1% with reflections off completely. The 1% tax is now accumulated in the contract address with the liquify function off, thus burning 1% per transfer.

As the contract can no longer liquify to add to the marketing wallet, the tokens are now burned in the contract address.

Contract address "Burn address". You can see gm accumulating in the address below. All of this gm should be added to the gm sitting in the black hole wallet to calculate the total burn.

Future Objectives

gm has plans to continue to expand the movement in accordance with our roadmap, which includes, but is not limited to what has been mentioned in this whitepaper. Readers should keep in mind that the material in this section is subject to change as the legal process is worked through. In addition to providing value to gm holders, a major objective in our future is to be charitable, providing our community with the opportunity to vote on token changes and decisions regarding new revenue and potential charitable donations. This is a way for the gm community to feel a sense of power and pride in knowing that the gm movement is used to make positive changes to the world.

Plans for white paper v2

We are planning on releasing a 2nd version of our white paper which will be fully analyzed by our legal team in order to keep us compliant with US law. Not only will the 2nd version have all the proper legal framework in place, but it will also provide a deeper technical dive with much more detail into every roadmap item that the gm team plans to accomplish.

White paper v1 has not been reviewed by the gm legal team and is to be seen as a guide, overview, and overall look into what gm is about.
