

**AGL VEHICLE
SOLUTIONS**

USER GUIDE

iQ360 User Guide.

Everything you need to find your way around
the AGL Vehicle Solutions iQ360 portal.

WELCOME

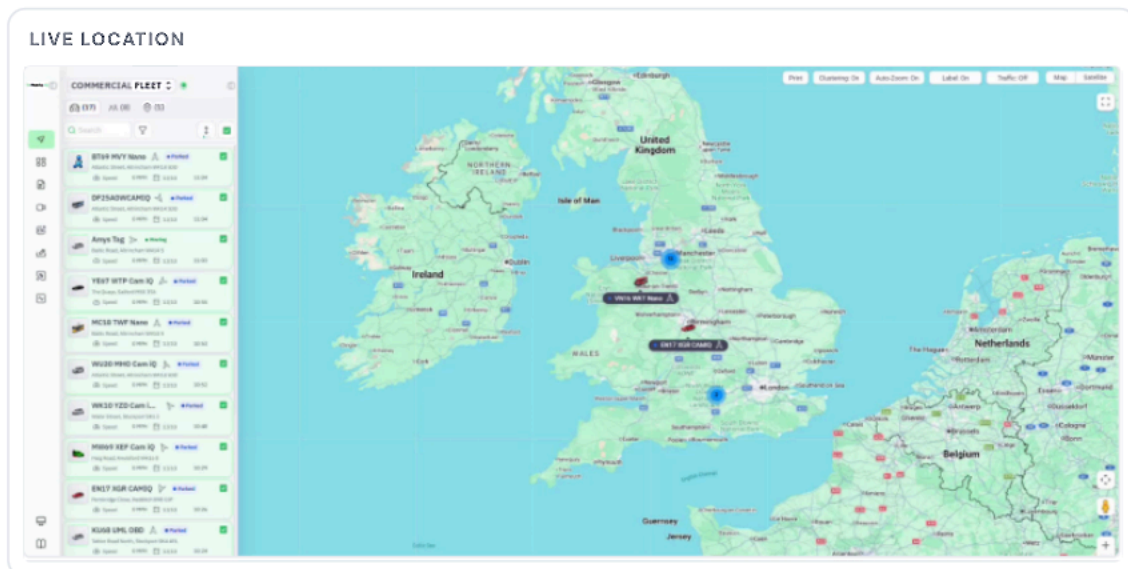

Welcome to iQ360

iQ360 is the new AGL Vehicle Solutions web portal. It replaces your existing portal automatically. It has been rebuilt from the ground up using your feedback, so it looks more modern, loads faster and takes fewer clicks to get to what you need. Everything now sits on one platform instead of several.

In this guide: 1 Live location · 2 Vehicle details · 3 Reports · 4 Camera · 5 Fleet Insights and AI agent · 6 Admin

1 Live location

Live location shows where your vehicles and assets are right now. Your vehicles are listed on the left and shown on the map.

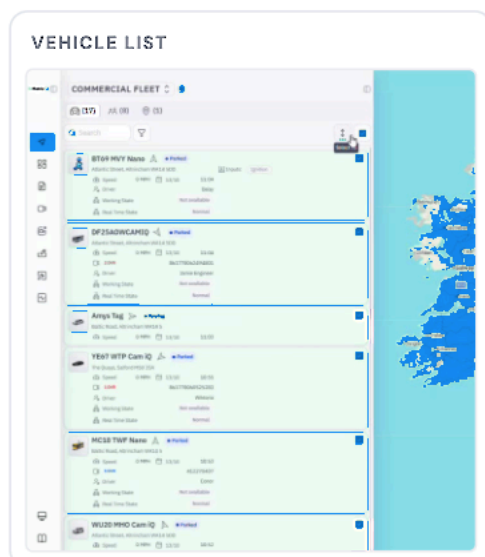

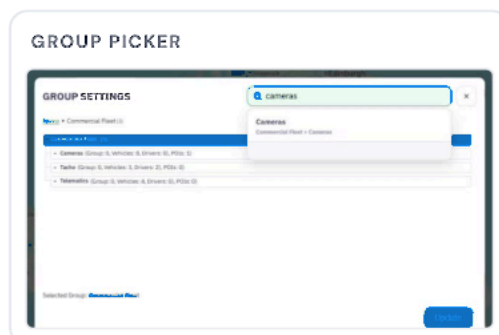

Selecting vehicles

- Click a vehicle in the list to show it on the map, one at a time.
- Or tick the box at the top of the list to load every vehicle onto the map.

Jump straight to a group

If you manage lots of groups or subgroups, open the group picker and type the name of the group you want instead of clicking through each level. For example, search for “cameras”, select the group, then click **Update** and the portal takes you straight there.

See more at a glance

The list now fits more vehicle cards on screen at once. Use the arrows on a card to expand it and see more detail, such as driver ID or inputs. You can expand it again for even more.

TIP

Set your browser zoom to suit your screen. Zooming out shows more vehicles and information at once, and the page works exactly the same.

2 Vehicle details

Click the **magnifying glass** on a vehicle card to open its detail view. Across the top are six tabs: **Today**, **Journeys**, **Alerts**, **Diagnostics**, **Find Nearest** and **Settings**.

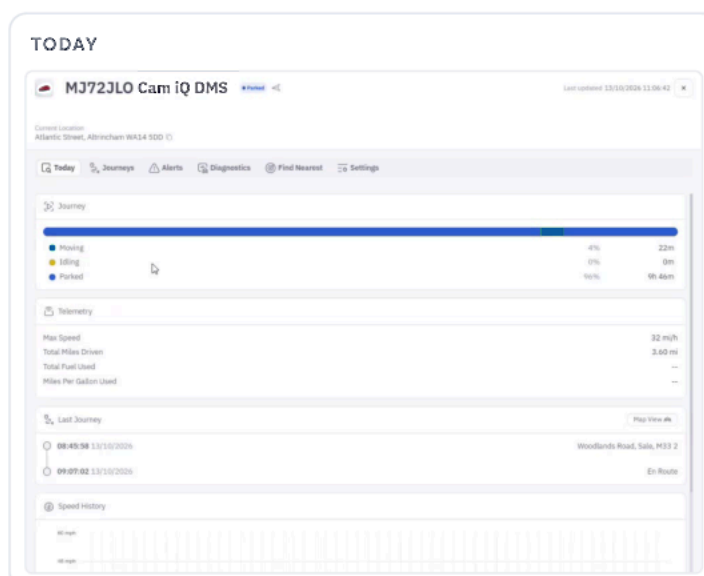

WHAT'S CHANGED

The magnifying glass replaces the three-dot menu from the previous portal.

Today

A clear summary of the vehicle's day: time spent moving, idling and parked, telemetry such as max speed and miles driven, its last journey and its speed history.

It has been redesigned with new colours and icons so you can see what you need as soon as you log in. You can also collapse parts of the page to simplify the view further.

Journeys

Lists the vehicle's journeys. Click **View** to see a journey on the map.

If a vehicle has been out all day, use **Rows per page** at the bottom to show more journeys on one page.

Alerts

See any alerts that have been sent for the vehicle.

Diagnostics

See all of the vehicle's diagnostic data. Every type of event now has its own colour, so they are easier to tell apart.

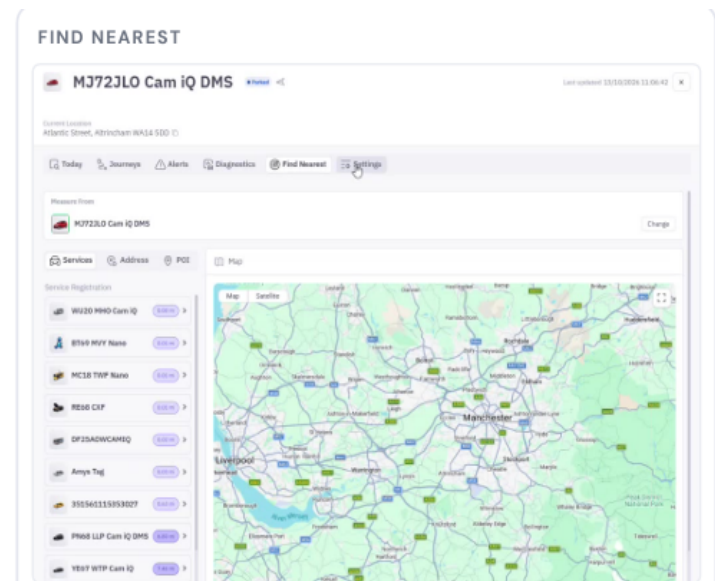

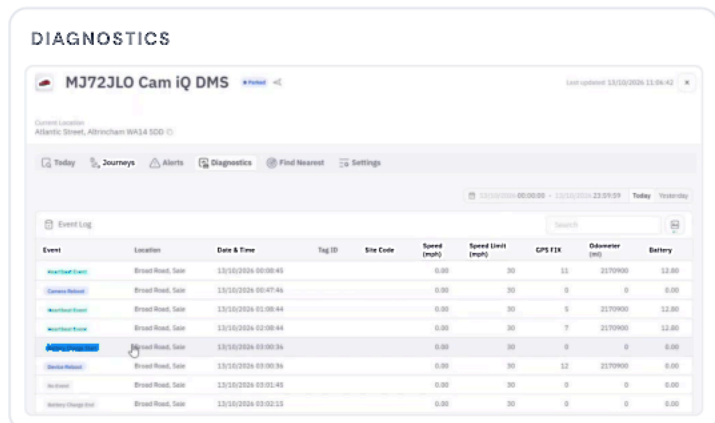

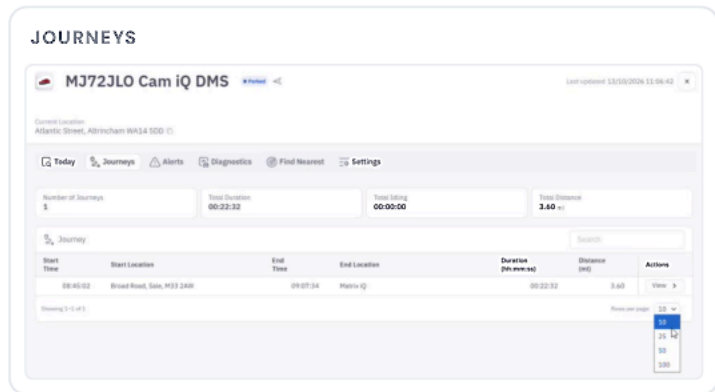

You can select more data without moving between pages.

Find Nearest

Choose another vehicle, an address or a point of interest, and Find Nearest tells you how far away it is and how long it would take to get there.

WHAT'S CHANGED

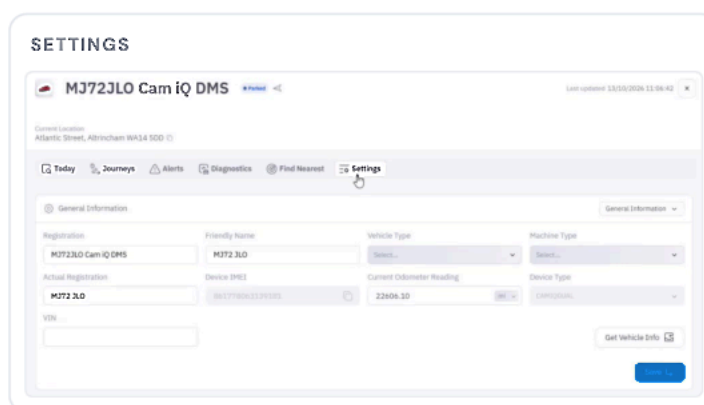

Find Nearest replaces the Proximity and Routing page.

Settings

Change a vehicle's details, such as its registration and friendly name.

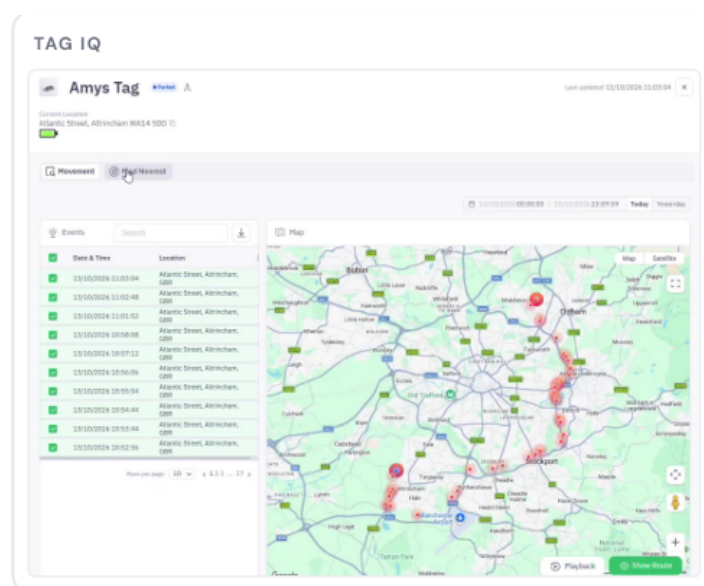

This tab is now called Settings, in line with the everyday language you will know from your phone.

Tag iQ and MagTrak

Tag iQ and MagTrak devices have their own redesigned view.

The **Movement** tab lists all of the events alongside a map, and the **Find Nearest** tab works in the same way as for vehicles.

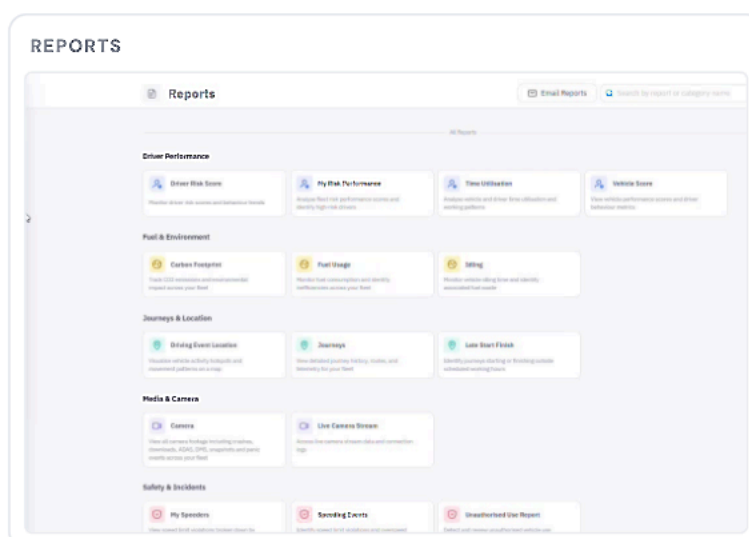

3 Reports

Finding a report

Reports are now grouped into sections, such as Driver Performance, Fuel & Environment, Journeys & Location, Media & Camera and Safety & Incidents.

Each report has a title and a short description of what it shows. If you know what you are looking for, use the **search box** at the top right.

Running a report

Reports run live in the portal. Using Journeys as an example: select your vehicles, choose your dates, then run the report.

- The **cards across the top** summarise everything you have selected, such as the number of journeys, total duration, idle time and distance.
- Underneath, each vehicle has its own row showing its registration, journeys, duration, idle time and distance.
- Click **View** on a vehicle to see its individual journeys.

JOURNEYS REPORT

Each journey shows its start and end time and location, the driver (where you use tacho cards, Dallas keys or RFID fobs), duration, max speed, distance and idle time.

Journey details

Click **View** on a journey and its details slide in from the right, so you don't lose your place in the list.

You will see summary cards, the route on a map and the events underneath, so you can tell exactly what each point on the map means. You can filter the events too.

To see everything at once, click **Day On Map** at the top right. It shows all of a day's journeys on one map, and you can change the day.

Exporting and scheduling

To keep a copy of a report, use the export button at the top right.

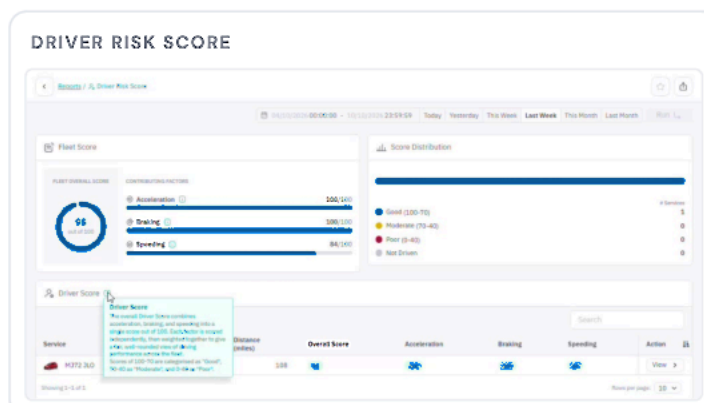

You can **export to CSV**, **export to PDF** or **schedule the report** to be sent to you regularly.

Driver Risk Score

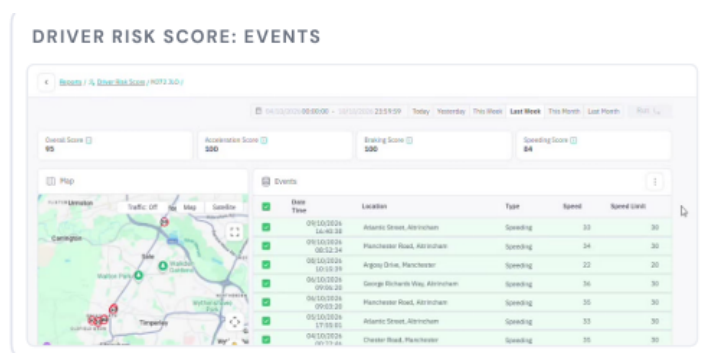

Shows a fleet score and how your drivers' scores are spread, with separate scores for acceleration, braking and speeding.

Hover over the blue information icon next to any title to see what it means. These quick tips appear throughout the portal.

To see how a score was reached, click **View** on a vehicle. You will see every event behind the score, with the date and time, location, type of event, speed and speed limit.

To focus on one type, such as speeding, filter by it.

There are many more reports in the library, including alerting, notifications, driving events and data, and late start and finish. Have a look around.

4 Camera

Click the **camera icon** on the left-hand menu to open the camera report straight away. Cards across the top show the total number of videos and what they relate to, and your vehicles are listed underneath. From here you can request historical footage or view footage you have already downloaded.

Configure The Download

Set clip length and which camera to pull footage from

Request new footage

Choose **Request new footage**, then work through three steps:

1. **Find event.** Pick a date, and optionally a time and an address. The events for that period are listed below, with their diagnostic data.
2. **Select event.** Click **Select** next to the event you want.
3. **Configure the download.** Choose the clip length (for example 10, 30 or 60 seconds) and the camera (1 to 4), then request the download.

View downloaded footage

Footage you have already downloaded appears under **Video Records**. Choose **Grid** to see thumbnail tiles, which suits smaller amounts of footage.

5 Fleet Insights and the AI agent

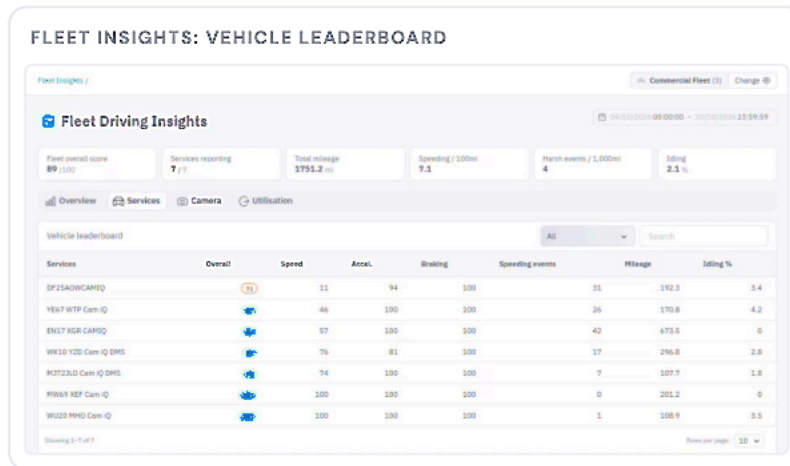

IMPORTANT

Fleet Insights is not switched on by default. To have it enabled, speak to your customer success manager or account manager.

Fleet Insights gives you a snapshot of your headline figures in one place, so you can see the key reports side by side without running each one individually. It is designed for anyone who logs in once a day, such as a fleet manager or director, and wants to see how the fleet is doing at a glance.

The **Overview** shows trends over time, a score comparison, speeding by road type and idling. Use the tabs across the top to look at your vehicle leaderboard, camera events and utilisation.

AI agent

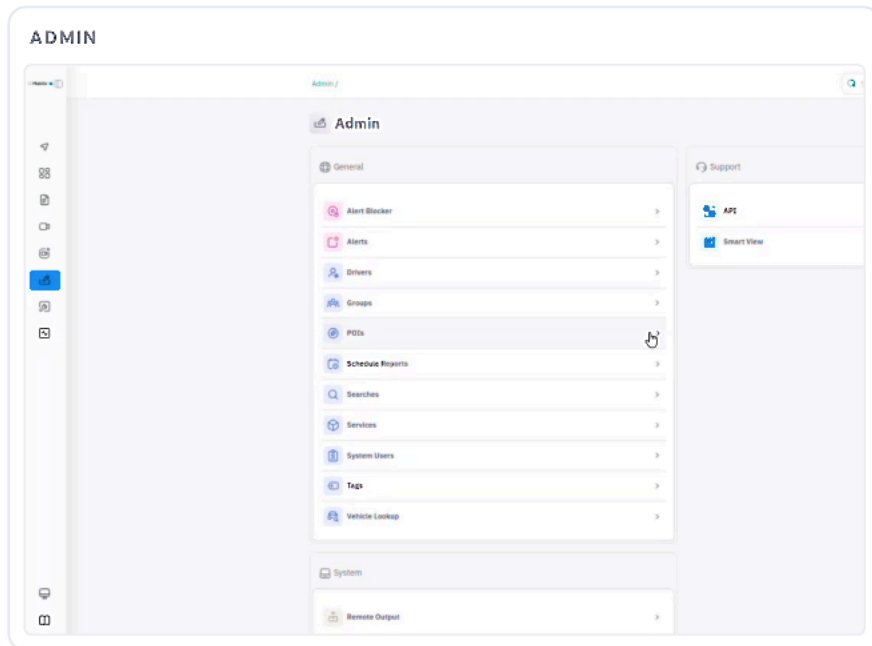

Click the button in the **bottom right corner** to open the AI agent. Type a question, or choose one of the suggested questions, and it will answer using your data.

For now the AI agent is only available on the Fleet Insights page. We are actively looking at and testing how it could be used in more of the portal.

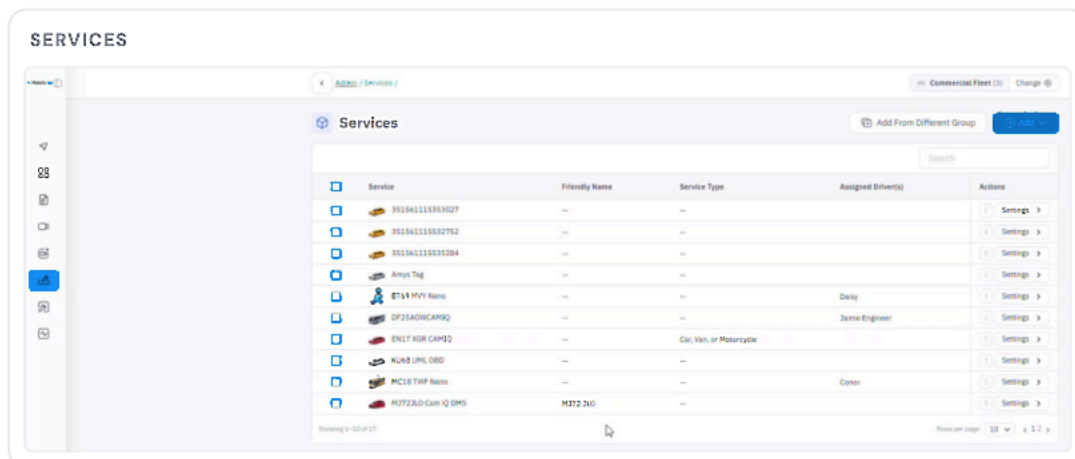

6 Admin

The admin area is now organised into clear categories, so you can see what is available and click straight into it. The content is very similar to what you are used to, and every admin feature customers use has been brought across from the previous portals.

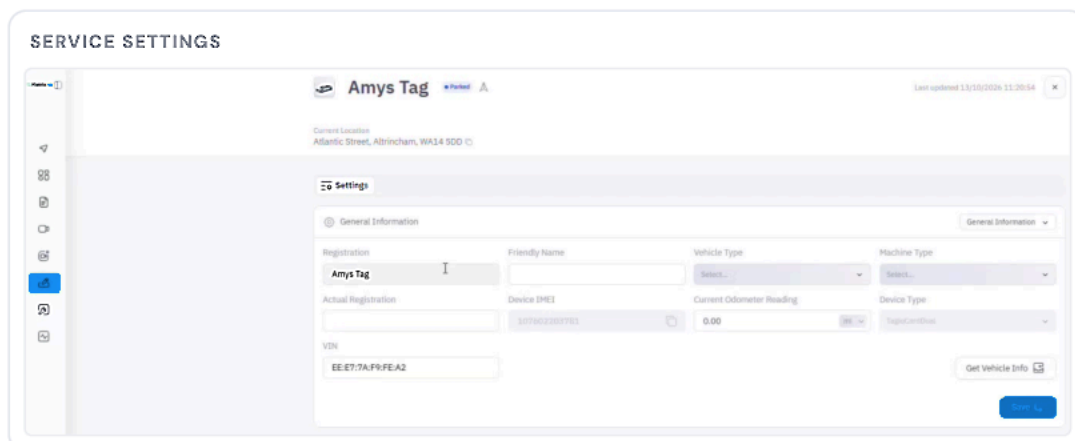

Services

Vehicles in admin is now called **Services**, because you can now track all sorts of assets, including Tag iQ and MagTrak devices, not just vehicles. From here you can add and view service details.

Click **Settings** next to a service to change its name and other details. The options are grouped using the drop-down at the top right, and some wording has been updated to make it clearer what you are changing and why. **Customised display**, for example, is new.
