

Revolutionary Belt Trailers

BUILT YOUR WAY

Over 50 Years of Unrelenting INNOVATION

The adventure began over 50 years ago, when we hand built our very first self-unloading conveyor belt trailer.

And revolutionized an industry.

Today, we continue to lead the industry with trailers that work as hard as you do. Our craftsmen still meticulously build every trailer by hand. Our design and engineering team continues to pioneer breakthroughs that push the envelope for faster, smoother

loading/unloading and non-stop performance in the field. We do all this to fulfill the original mission we embarked on in 1975—to help you haul as many loads at max payload, in the least amount of time, at the lowest possible cost—and make all of your hard work pay off.

The Original SELF-UNLOADING TRAILER

EAGLEBRIDGE®

**EAGLE BRIDGE® is the self-unloading
belt trailer that started it all in 1975.
Delivering value with every load.**

Delivering bulk commodities requires hauling the heaviest loads over the roughest back roads, all while absorbing severe stress and punishment without breaking. Since 1975, Trinity® trailers have excelled at hauling bulk commodities — longer than any other self-unloading trailer. And, after 50 years, EAGLE BRIDGE® trailers have gained a well-deserved reputation for longevity and reliability.

FAST UNLOAD

Our trailers unload more quickly and cleanly so your drivers can spend time behind the wheel instead of cleaning out the trailer bed.

LESS MAINTENANCE

Accessible components and flexible design make Trinity trailers the most reliable, easiest-to-maintain trailers available.

CORROSION RESISTANT

Stainless steel is the best metal for preventing corrosion, and we build the industry's leading stainless steel belt trailer.

RESALE VALUE

Trinity trailers retain higher resale values, giving owners like you the best possible long-term ROI.

The AGRI-FLEX® design allows 36 degrees of flex hauling hay and silage from field to freeway.

Our versatile and cost-efficient AGRI-FLEX® belt trailers are built with high-strength stainless steel — making them more rugged AND more flexible — the design of our AGRI-FLEX belt trailers allow a full 36° of flex time after time. When you need a trailer with true four-season capabilities, look to the AGRI-FLEX.

DESIGNED FOR THE FIELD

AGRI-FLEX is the perfect solution to go from field to feedlot to freeway. Flexibility through engineering and time-tested manufacturing methods make this trailer ideal for terrains of all types.

CUSTOMIZED FOR YOU

AGRI-FLEX comes standard with electric tarp and a 24" permanent extension for silage. Choose the length, suspension configuration, and belt width—48" or 61"—along with other options to get exactly what you need.

LONG LASTING

All Trinity products are designed to work as hard as you do and require minimal maintenance. From corrosion-resistant stainless steel to innovative “suspension-bridge” structural design, every AGRI-FLEX trailer is built to stay on the job.

Versatile
IN THE FIELD

AGRI-FLEX®

Innovative Engineering THAT GROWS YOUR BOTTOM LINE

Operator-friendly features boost productivity and increase profitability.

HYDRAULIC MANIFOLD

Our state-of-the-art hydraulic power system is modular, expandable, and ready for the future. Automatic switching provides availability to gasoline, electric, or Power Take Off (PTO) on demand. Available with wired or remote capabilities.

WIRELESS REMOTE

The wireless remote option gives you the ability to operate your trailer from anywhere within 75-100 feet of your trailer.

REAR DOORS

All of our trailers come standard with a rear Corrosion Resistant Door (CRD) which offers superior corrosion resistance. Available with an optional stainless steel lower function.

REMOVABLE MAINTENANCE LADDER

The newly-redesigned maintenance ladder is made of aluminum for reduced weight and is easily removed and stored safely on the curbside of the trailer when not in use.

ELECTRIC TARPS

Trailers equipped with electronically operated tarps feature a rear tarp arm (instead of a cable system) to assist the roll tube while rolling up the tarp. The tarp arm significantly improves performance.

Stainless steel trailers not only look better, they work harder.

FLEXIBLE STRENGTH

Taking a conventional trailer off road and into the field can lead to a broken trailer and lost income. Our amazingly flexible design means more time on the job and far fewer repairs.

LIGHTWEIGHT

Trinity trailers have always been lighter than other options—sometimes as much as a ton lighter—which allows for higher payloads. At the same time, our extensive structural and fatigue analysis combined with 50 years of in-the-field experience delivers the most durable belt trailer available.

CORROSION RESISTANCE

Stainless steel is the best defense against road salts and corrosive payloads like corn gluten, sludge, and fertilizers. Other materials are not equipped to stand up to severe conditions on a day-in and day-out basis.

BELT WIDTH	IDEAL FOR HAULING
25"	Potatoes, Onions, Sugar Beets, Cereal Grains
31"	Potatoes, Onions, Sugar Beets, Nuts, Cereal Grains, Granular Aggregate, Dry Fertilizer
36"	Potatoes, Onions, Sugar Beets, Nuts, Cereal Grains, Granular Aggregate, Dry Fertilizer, Compost, Mulch, Soil
48"	Nuts, Nut Shells, Cereal Grains, Silage, Feed Ingredients, Granular Aggregate, River Rock, Dry Fertilizer, Compost, Bio-Solids, Distillers Grain, Mulch, Dirt, Top Soil, Poultry Litter, Auto Fluff, Crushed Glass
61"	Onions (Fresh Pack), Nuts, Nut Shells, Cereal Grains, Silage, Feed Ingredients, Granular Aggregate, River Rock, Dry Fertilizer, Compost, Bio-Solids, Distillers Grain, Mulch, Dirt, Top Soil, Poultry Litter, Auto Fluff, Crushed Glass

Three unload system choices that let you work the way you want.

PTO SYSTEM
The power take-off systems give you the freedom and flexibility to operate where ever your work takes you.

GASOLINE SYSTEM
Convenient electric start. Enclosure protects your engine from the elements.

ELECTRIC SYSTEM
Standard 7.5 HP single-phase electric motor (optional three-phase motor available).

Our Wide Range of Door Options HELP LIGHTEN YOUR WORKLOAD

Multiple door options to suit your specific needs.

STANDARD TOP HINGE DOOR
Hinged at the top of the trailer — a simple-to-operate pneumatic latch holds the door closed. Two hydraulic cylinders (one on either side) lift and hold the door open. Options include: no lower function, slide up, or lower flip up.

OFFSET TOP HINGE DOOR
Hinged at the top and designed to provide additional clearance and convenient unloading. It functions the same as our top hinge door. Options include: no lower function, slide up, or flip up.

FULL SWING FLIP-UP DOOR WITH HYDRAULIC OPERATION
The lower section lifts up, allowing the entire door to swing out to the open position. The flip-up door opens quickly and easily, plus it features a grain-tight seal. (Available in manual or hydraulic configurations.)

FULL SWING SLIDE-UP DOOR WITH HYDRAULIC OPERATION
Slide-up door features a smaller opening, which enables precise control of payload flow as well as optimum sealing capacity. Ideal for unloading into a conveyor or auger, and also swings to full open position for even greater flexibility. This option is ideal for higher moisture products.

FULL SWING SPUD DOOR
Popular on our 25" and 31" narrow-bottom trailers, this door consists of a flip-up bottom half and a fold-down upper. The fold-down upper enables a piler to extend into the trailer interior. It is available in your choice of plywood, sheet metal or expanded metal. Optional Fixed Spud Door includes a lower flip up.

Switch from Silage to Everything Else AND DO IT BETTER

Designed for those who load in the field.

Your equipment needs to be built for multiple loading scenarios. You need flexibility. This trailer is valued by operations who (in the past) have had to settle using multiple trailer types to haul silage and other products. You can take advantage of the redesigned extension package for silage without losing the ability to haul everything else.

OFFSET TOP HINGE WITH INTEGRATED EXTENSION

When product is piled high, this door will stand up and out of the way so the product doesn't hang up. Since the rearmost part of the extension is integrated with the door, you can use every cubic yard of capacity from the front to the back of the trailer.

ELECTRIC TARP

We have added driver convenience with the electric tarp system. This ensures you have easy tarp open and close operation from inside or outside the cab of your truck.

HYDRAULIC DOOR LATCHES

You brought the problem, we have the solution. Hydraulic latches are now available on all top-hinge doors with for 48" and 61" belt widths. To bring more convenience we have sequenced them with the wireless remote system.

Nobody takes care of your Trinity trailer better than Trinity Service & Parts.

When servicing, reconfiguring or restoring your Trinity trailer, protect its life, reliability and resale value by having the craftsmen who built it do the work.

PARTS. If your trailer is down, it's not generating income. To ensure the reliability of your trailer, insist on parts and accessories that are guaranteed to fit and work. Visit us online or give us a call.

PREVENTATIVE MAINTENANCE. Get the most out of your Trinity trailer with preventative maintenance programs that fit your schedule and your budget.

REBIN. When it's time to breathe new life into your older Trinity trailer, we can completely rebin it and make it like new. This process is typically more cost effective than buying a new trailer.

WARRANTY. At Trinity, we proudly stand behind the products we build. New trailers come with a 3-year warranty, one of the longest and strongest in the industry. See trinitytrailer.com/warranty for details.

Genuine SERVICE & PARTS

Flexible EQUIPMENT FINANCING

Fast, easy financing for *all* makes, brands, and types of equipment.

No matter your budget. No matter the size of your operation. No matter if it's a Trinity trailer or any other type of equipment, compare our financial offerings before you commit.

ZERO APPLICATION FEES. LOTS OF OPTIONS.

Financing your equipment with us can mean lower initial investments and the freedom to find a solution that fits your budget and your timeline.

- Flexible terms
- No application fees
- Highly competitive rates
- Fast approvals — in as little as 24 hours*
