

Available in 100 size options, Easy Shelters are a New Zealand made, kit-set, fabricated steel-framed and clad shelter, designed for farm and lifestyle properties.

While our shelters were originally conceived to fill a gap in the market for horse and animal shelters, these are also now used to store all sorts of feed and equipment on small or large properties.

The components used provide a complete system, supplied ready for erection that will require minimal maintenance throughout the life of the structure.

The Z275 galvanised finish on the posts, purlins and girts give an excellent corrosion protection and reduce the need for painting.

These comply with New Zealand Building Code, and are designed to AS/NZS 4600:2005 Cold formed steel structures.

Cladding options are:
Zincalume

Coloursteel Maxam available in 20 colours
Galvsteel

Easy Shelters are supplied with all fabricated steel components, fasteners and installation instructions. We recommend that assembly be undertaken by 2 people with one being a competent handy man at a minimum.

The frame is pre-drilled for bolt assembly and the sheet iron is supplied in pre-cut lengths ready for screw fixing to the frame.

Corner and back wall flashings are provided. Additional flashing kits are available for the roof sides and front, as well as kits for the spouting and down-pipe.

Available from 2.6 to 21.7m² in 4 heights options
